I. INTERNATIONAL ECONOMIC ENVIRONMENT

Since the last few quarters, the world economy is facing a deep recession as the financial turmoil intensifies. Real GDP growth rate is estimated to have dropped by 5% in the last quarter 2008 following an economic recession of 7% in advanced economies. The last estimates of the IMF highlight a world economic growth will decline by 1.3% at the end of 2009, against 3.2% recorded in 2008.

In the United States, the economic activity decreased by 6% in the last quarter 2008 on annual basis and is estimated to decline by -5.0% on quarterly basis for the first quarter 2009. The private consumption expenditure is decelerating and residential investment declining, affecting negatively the overall economic activity.

In the Euro zone, economic growth is expected to fall to -3.8% year on year change in the first quarter 2009 after -6% in the last quarter 2008, due to the weakness of the global demand and financing conditions tightening.

In Japan, economic activity worsened following the slowdown in exports and domestic demand. The GDP growth rate, on quarterly basis, is estimated at -10.9% for the first quarter 2009 against -13% in the last quarter 2008.

In the emerging markets and developing economies, the economic activity is also facing financial crisis effects. The growth rate is projected at 1.6% at the end of 2009, against 6.1% in 2008. In Africa, the economic growth is projected at 2% in 2009 after a level of 5.2% in 2008, due to downturn of world demand and the decline in commodity prices affecting particularly the export sector of these countries.

Regarding price developments, inflation pressures have eased due to a sharp decline in commodity prices and following the deepening in the world economic recession. In USA, inflation will drop to -0.07% in the first quarter 2009 after an increase of 1.63% in the last quarter 2008. In the euro zone, inflation will decline to 0.97% against 2.30% recorded in the last quarter 2008. In Japan, after periods of positive inflation, the trend will overturn with the first quarter 2009 and a deflation of 0.20% will be registered, after was 1.03% for the last three months of 2008.

On the commodity market, prices stabilized somehow over the last quarter. On monthly average, oil prices reached 44.86 and 43.24 dollars per barrel respectively in January and February 2009 against 41.58 dollars in December 2008. However, on quarterly average, oil prices fell to 44.98 dollars in the first quarter 2009, from 55.89 dollars in the fourth quarter 2008. On the other hand, the non-energy commodity prices which recorded a drawback since October slightly increased in March 2009. In aggregate terms, the price index for non-energy commodities (denominated in US dollars) end March was 3% higher than the level at the beginning of the year.

On the money market, central banks continue to reduce their policy rates in their efforts to alleviate financing conditions. On March 5, 2009, European central bank reduced its policy rate to 1.5%. The Federal Reserve kept its rate in a range between 0% and 0.25%; the Japanese bank reduced its policy rate to 0.1% and the Bank of England to 1%. In USA, the average three months interest rate declined to 1.19% over the first quarter 2009 from 1.43% in the last quarter 2008. This rate followed the same downtrend in other markets.

On contrary, between the last quarter 2008 and the first quarter 2009, long term interest rates increased in general reaching 2.66% from 2.21% in USA, 1.37% from 1.17% in Japan, 3.17% from 3.02% in the United Kingdom and 2.99% from 2.95% in the euro zone. This increase in long-term interest rates reflects high risk awareness among bond market investors related to the fiscal burden stemming from the policy measures announced by different Governments. In fact, for the financial markets, the uncertainties in economic activity perspectives remain too high for releasing market conditions.

In the context of the current financial crisis, the foreign exchange market continues to experience a strong volatility. At the end of the first quarter 2009, euro depreciated on average by 5%, traded at 1.33 USD against 1.40 USD in the last quarter 2008. The depreciation of the euro is explained in particular by the repatriated inflows of foreign investments in the United States. However, the euro is appreciating vis-à-vis the Japanese yen totaling 131.1 yens for the first quarter 2009 from 126.7 yens recorded in the last quarter 2008, that is an appreciation of 3.5%. However, the euro depreciated by 2.2% vis-à-vis the pound sterling equivalent to 0.93 pound sterling against 0.95 pound sterling in the last quarter 2008.

II. NATIONAL ECONOMIC ACTIVITIES

II.1 AGRICULTURAL PRODUCTION

A. Food production

The harvests for the 2009A agriculture season marked better performance resulting mainly from the use of more artificial fertilizers and favorable climatic conditions in general.

Table 1: Food production by crop in season A (2004-2009, in tons)

	2005A	2006A	2007A	2008A	2009A	% change 2009/2008

Source: MINAGRI, Agricultural Statistics Department

The rice has been grown in the Districts where marshlands or flood plains were opened up or rehabilitated. The cultivated area under maize increased by 9% from 2008A to 2009A season while its production increased by 62.9%, thanks to the use of improved seeds and application of fertilizers in the crop intensification program mostly in the eastern and southern provinces. The area under wheat though globally small, also increased by 105% over 2008A season but its production slightly increased by 1.1% in 2009A.

In general, the best performance observed in cereals production (39.7%) was a result of government policies to increase the availability, accessibility and affordability of fertilizers to farmers. It was also due to the application of the “Green Revolution Program” especially in the Eastern province, within the Districts of Kirehe, Nyagatare, Bugesera, Kayonza and Gatsibo.

After a high recovery in roots and tubers’ production in 2008A season (40.6%), the 2009A season also experienced a good performance with 17.8% growth rate in production. Though the area under Irish potatoes decreased by 6% due to the poor payment in the previous cropping season; their production increased by 20.1% due to the use of improved seeds as well as application of fertilizers by some farmers. The production of cassava continues with the upward trend by the increase of 14.4% in area under cultivation compared to 2008A season but increase in production was 18.9% in 2009A season due to the adoption of new cassava trees (cultivars) that are resistant to the Cassava Mosaic Disease (CMD).

Although bananas occupy a big part of the cultivated area in the country, they have continued to suffer from Banana bacterial wilt mostly in the western province and in some districts of the Northern Province. Their production in 2009A season increased by 26.2% compared to a slight increase of 0.1% in 2008A season. In the past bananas for local wine brewing occupied 60% of the total land area under banana cultivation, followed by cooking bananas occupying 30% while sweet bananas occupied the remaining 10%. As a result of government policy for food production exports, the recent trend reveals farmers replacing bananas for wine brewing with cooking bananas and sweet bananas in the eastern and western provinces. As more quality planting materials are made available and distributed to farmers, this effort will succeed in the near future.

II.2 NON AGRICULTURAL ACTIVITIES

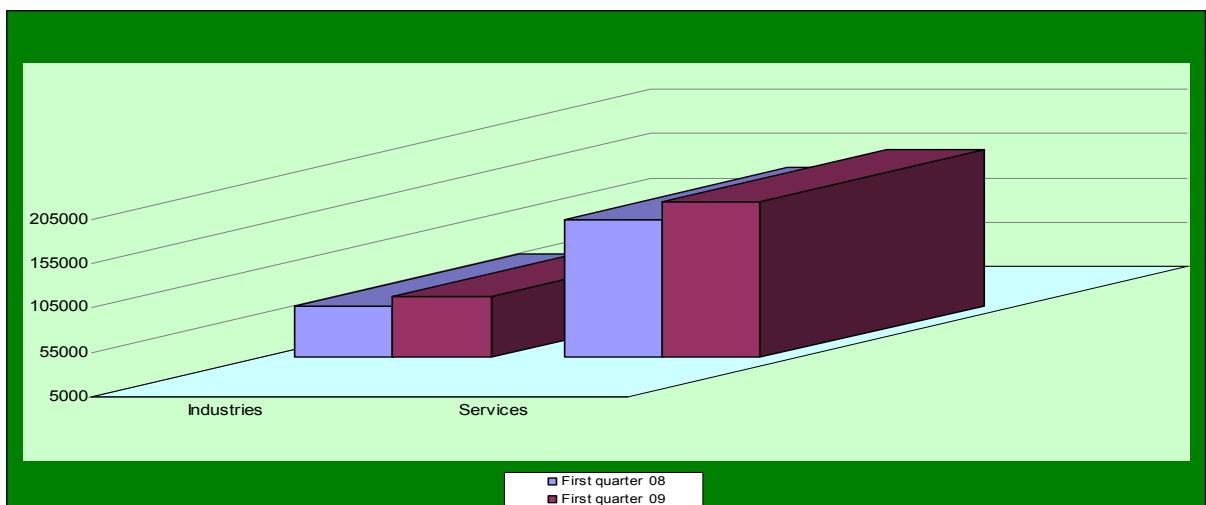

There was an upward trend in the activities of enterprises during the first quarter 2009 compared to the first quarter of the previous years, in which the activities were boosted by a high demand. However, there is noticeable overall improvement in large enterprises’ turnovers in non agriculture during the first quarter 2009 compared to the same period of 2008. The increase in total turnover was 14.1%, rising from RWF 223.603 to 255.057 billions. This growth is attributed globally to both industry (+16.1%) and services (+13.3) sectors. However, taking into account the overall annual inflation estimated at 17.1% in March 2009, the two sectors underperformed in real terms.

Table 2: Monthly turnover developments for the Industry and Services sectors (in billions of RWF)

	2008				2009				% Change Q1,2009 / Q1, 2008
	Jan	Feb	Mar	Q1	Jan	Feb	Mar	Q1

Source: RRA, Department of Large Tax Payers

Fig. 1: Turnovers developments for industry and services sectors (in millions of RWF)

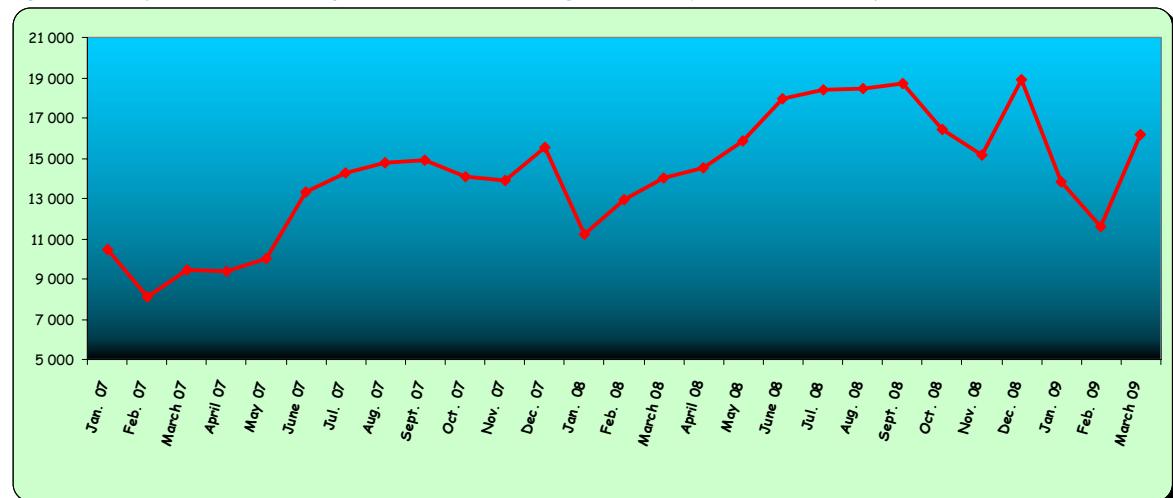

Source: RRA, Department of Large Tax Payers

1. Manufacturing Industries

The turnovers for large manufacturing industries which were RWF 38.190 billions in the first quarter 2008 rose to 41.607 billions in the first quarter 2009, which is an increase of 8.9%. This increase was attributed mainly to breweries (alcoholic and non alcoholic beverages) and printing shops which grew respectively by 27% and 26.4% in the first quarter 2009, while the total turnovers for other large manufacturing industries

decreased by 2.1% from RWF 23.693 billions realized in the first three months of 2008 to RWF 23.207 billions during the same period of 2009. However, on monthly basis (From February to March 2009), other manufacturing industries turnover grew by 61.4% and printing companies more than doubled as their turnovers increased by 147.4% while breweries (alcoholic and non alcoholic beverages) increased by 10.4%.

Fig. 2: Monthly turnovers development of manufacturing industries (in millions of RWF)

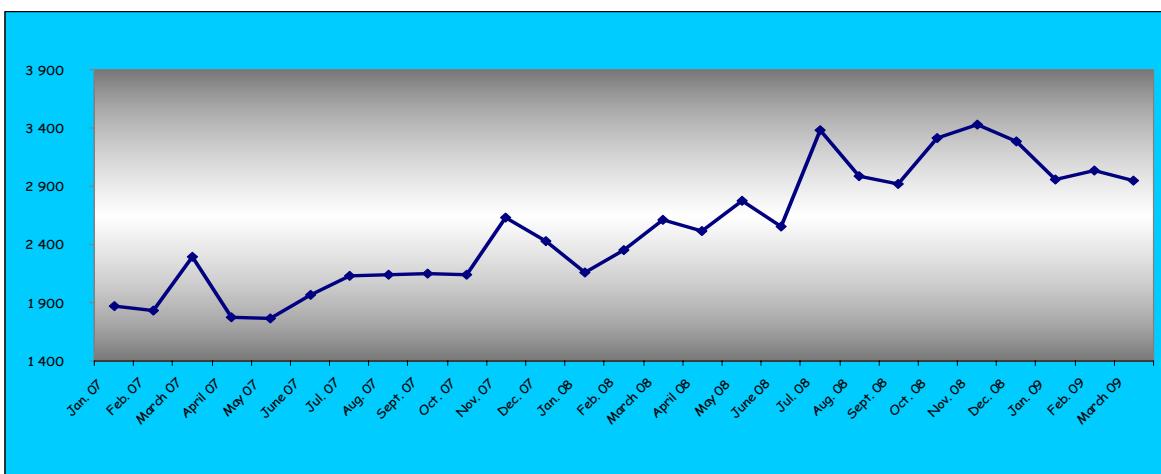

Source: RRA, Department of Large Tax Payers

2. Energy Sector

The energy sector experienced a significant increase in turnovers during the first three months of 2009, as it increased from RWF 7.115 billions in the first quarter 2008 to RWF 8.935 billions in the first quarter 2009, which is an increase of 25.6%. This performance was mainly due to BAKRI INTERNATIONAL ENERGY (RWANDA) Company that started in July 2008 whose turnovers have been increasing most of the time.

Fig. 3: Monthly turnover development of Energy sector (in millions of RWF)

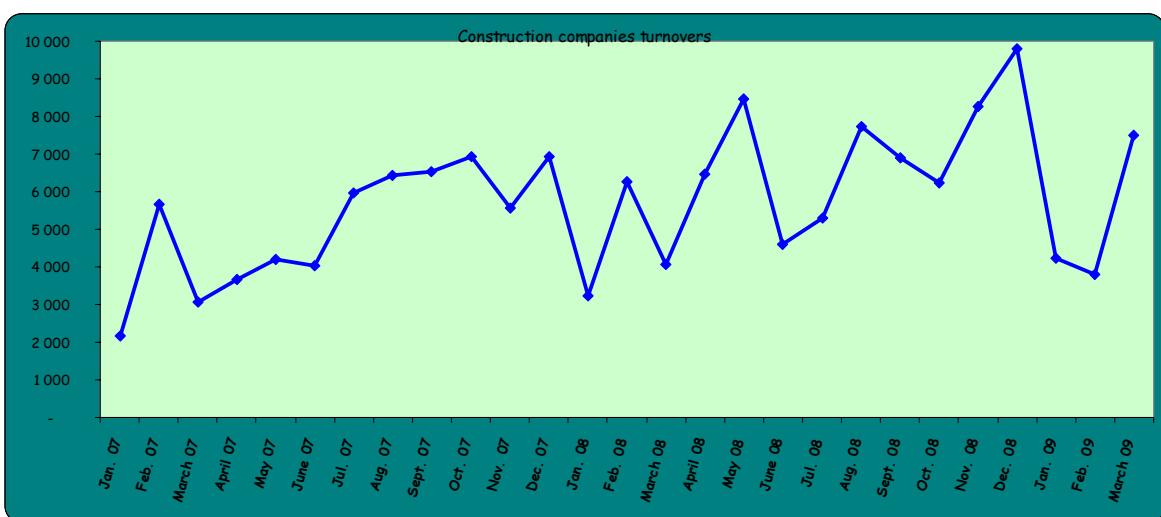

Source: RRA, Department of Large Tax Payers

3. Construction and Public works

The growth of construction and public works activities that have been accelerating progressively, maintains the same trend when comparing the first quarter 2009 with the first quarter 2008. The activities of the sector increased by 14.7%, rising from RWF 13.554 billions in the first three months of 2008 to RWF 15.552 billions in the first quarter 2009. This rise in the construction sector was mainly due to 96.8% monthly changes where the sector's turnovers almost doubled from RWF 3.812 billions in February to 7.500 billions in March 2009.

Fig. 4: Developments of turnovers of the construction and public works sub-sector (in millions of RWF)

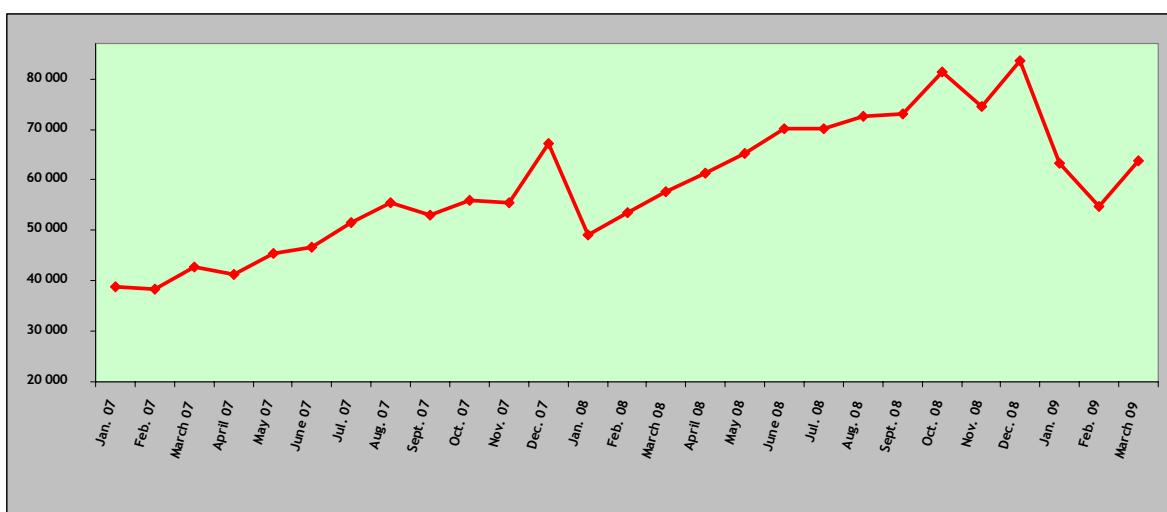

Source: RRA, Department of Large Tax Payers

4. Service sector

During the first three months of 2009, the overall services activities performed better with an increase of 13.3% of their turnovers compared to the same period of the previous year. This better performance of the sector is attributed mainly by Garage services whose turnover increased by 210.7% due to the motor vehicle technical control that begun last year where all used cars have to pass this technical control before being authorized for transportation purposes.

Post and telecommunications, other services, banks and insurance companies and trade registered growth rates of 46.9%, 42.5%, 18.4% and 13.5% respectively, while transport and storage, and petroleum companies respectively recorded decreases of 7.7% and 13.7% of their turnovers compared to the same period of the previous year. In general, services sector turnovers rose as its quarterly level increased from RWF 160.205 in the first quarter 2008 to 181.435 billions in the first quarter 2009.

Fig. 5: Developments of turnovers of larg service providing enterprises (in millions of RWF)

Source: RRA, Department of Large Tax Payers

II.3 EXTERNAL TRADE

The upward trend increase of imports observed for the last years was maintained during this first Quarter of 2009. Compared to the corresponding period of 2008, imports in the first three months of 2009 increased by 57.9% in value and 26.4% in volume. However, exports decreased by 11.3% and 29.6% in value and volume respectively. Consequently, for the same months, the exports/imports coverage ratio fell from 25.5% in the first quarter 2008 to 14.3% in the first quarter 2009.

Table 3: Trade Balance, Jan- March. 2008-Jan- March 2009 (Value in millions of USD, volume in tons)

A. Exports

Rwanda exports remained dominated by traditional exports products such as coffee, tea and minerals, constituting around 70% of total exports earnings in the first quarter of 2009. The value of major mineral exports was USD 15.7 millions representing 35% of total exports earnings, while coffee and tea amounted USD 15.5 million, which represent 34.5% of total export earnings. Due to low production and decrease in prices, coffee exports performed poorly, decreasing by 14.3% in value and 5% in volume terms.

However, tea performed better in both value and volume with respective growth rates of 17.1% and 17.42%, compared to the first quarter 2008.

Exports of the mining sector also show poor performance. Despite the improvement in volume by 0.5%, the value of exported tin fell by 32.4% due to declining international prices, from an average of 9.24 USD/kg during the first three months of the last year to 6.21 USD/Kg in the first quarter 2009. Coltan exports increased in both value and volume with respective growth rates of 4.4% and 12.8% in the first quarter 2009 thought international prices declined from 31.64 USD/kg in the first three months of 2008 to 29.31 USD/kg in the first quarter 2009. For wolfram and other minerals a sharp decline of their exports was recorded both in volume and value. The same downward trend is observed in non traditional Rwandan exports like hides and skins, flowers and other exports.

B. Imports

The imports during the first quarter 2009 increased in volume by 26.4% and by 57.9% in value as compared to the corresponding period of 2008, and reached USD 315.1 millions. Dominated by machinery, devices and tools, Capital Goods came in position with a share of 35.5% of the total value of imports. Imports of machinery, devices and tools increased by 161% and their share in total imports reached 24% in the first Quarter of 2009, from 14.7% during the same period of 2008. Most of devices were imported to equip Government hospitals, while imports of machines like computers in large quantities, were boosted by the Government Policy to build an ICT based economy.

Intermediate goods composed of construction materials, industrial materials and fertilizers represented 27.5% in total imports. The sharp increase in both value and volume in fertilizers with respective growth rates of 522.6% and 292.5% is mainly due to the Government policy aiming at the increase of agricultural production, so that fertilizers are abundantly imported and distributed to farmers on subsidized prices.

The importation of final Consumer goods reached USD 84.1 million representing 26.7% of total imports value and this category of goods remained dominated by foodstuffs and pharmaceutical products. While the volume of imported pharmaceutical products increased strongly (+74.9%), their value also slightly increased by 13.7%. The recorded increase in value of imported foodstuff was too high (+46.4%) and was due to the increase in prices since last year especially for fish and milk products. Also sugar and

cereals which account a big proportion of the imported food products have registered less increase in volume than in value meaning somehow an increase in prices.

Imports of energy and lubricants, of which fuel accounts for more than 89%, decreased by 3.9% in value while increasing by 7.6% in volume. This slight decrease in value reflects the fall in international oil prices. The imported fuel during the first quarter 2009 decreased by 9.4% in value, while increasing by 5.9% in volume terms.

Globally trade balance deficit continues to deteriorate, from USD 148.76 millions in the first quarter 2008 to a high level of USD 270.01 millions in the first quarter 2009.

III. INFLATION

After high inflationary pressures observed during the second and third quarters of 2008, Rwanda is experiencing price stability since the last quarter 2008, attributed to the good harvests of 2009A agriculture season and the fall in international prices of fuel and other imported goods. It is hoped that if this situation continues, as well as the expecting agriculture production, price stability should continue during the upcoming months.

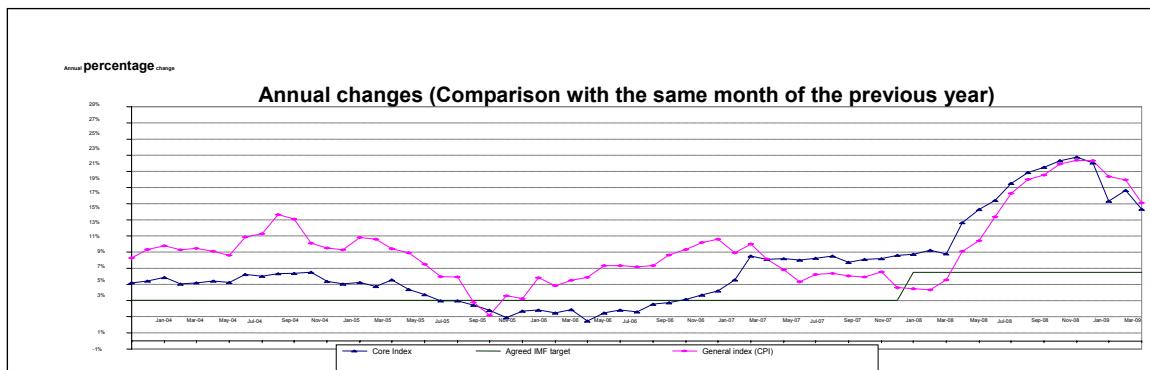

Table 4: Inflation (% change in CPI, base 2003:100)

	Group	Weights	Annual inflation				Monthly inflation			
			2008		2009		2008		2009

Source: BNR and NISR

In March 2009 the annual inflation was 17.1% compared to 20.0% in February 2009 and 22.3% in December 2008. On monthly basis, the headline inflation fell to 1.2% compared to 1.6% of the previous month. This slowdown trend is mainly attributed to the changes in prices of food and non-alcoholic beverages which have increase prices by 2.6% and 1.3% in February and March 2009 respectively.

Fig 6: Overall and underlying inflation (in %)

Source: National Institute of Statistics of Rwanda (NISR)

The 'local goods' increased by 17.8% on annual change with a monthly variation of +1.84%, while prices of the imported goods rose by 15.6% on annual change with a monthly change of +0.55%.

Source: BNR, Statistics Department

The underlying inflation (the one that excludes fresh products and energy from the basket of goods) on annual average fell to 16.3% in March 2009 from 18.7% in February 2009 while it was 10.8% in March 2008. On monthly basis, the underlying inflation reached 0.74% in March 2009 compared to 1.15% of the previous month.

IV. RECENT MONETARY DEVELOPMENTS

IV.1. BROAD MONEY

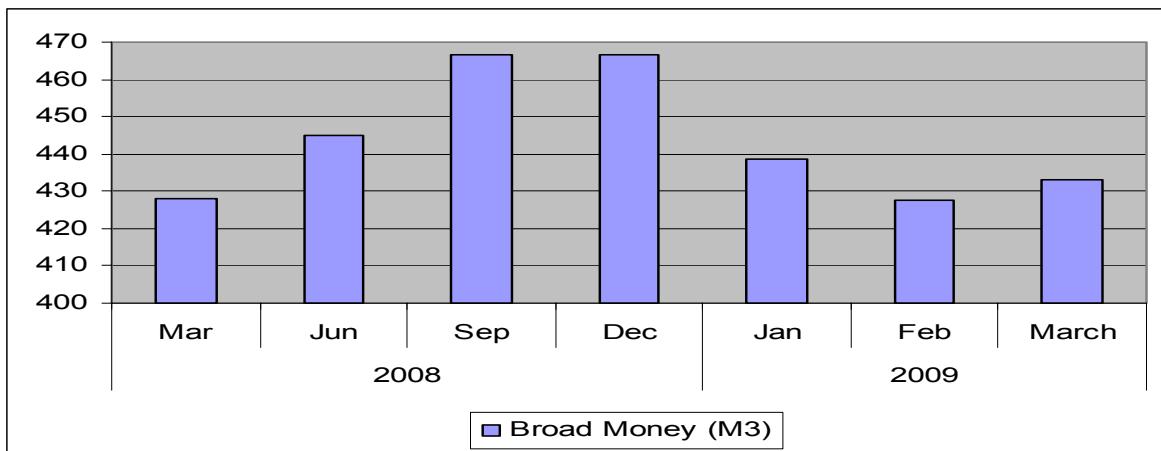

Broad money is estimated at RWF 432.9 billion at end of March 2009, which represent a decline of 7.2 % as compared to December 2008. In absolute value, the variation is a deep decrease of 33.5 billion of RWF, due to the fall by 55.1 billion in Net Foreign assets, while the Net Domestic assets increased by 21.6 billion.

The outstanding credit to the private sector remained quite at the same level during the first quarter 2009, with a diminution of 1 billion of RWF by end March. This situation results from the fear of banks to distribute new loans, following the liquidity crunch known since last quarter 2008 and exacerbated early 2009. In fact, contrary to the permanent excess liquidity situation that prevailed in the past 5 years, the banking system in Rwanda experienced recently a significant decline of liquidity. The following major raisons behind this situation can be highlighted:

1. Significant improvement in the absorption capacity of the economy as reflected by the rapid increase in credit to private sector which rose by 22.4% in 2007 and 31.6% in 2008;
2. Structural change in government spending: Government capital expenditure has increased in 2008. This resulted in subsequent increase in foreign exchange component of public spending; reducing the liquidity in RWF;
3. Important investments made by key depositors led to the reduction of their term deposits with the banking system; creating an important mismatch between long term credits and term deposits;
4. High inflationary pressures during the year 2008. As a consequence banking deposits declined as there was demand for more cash to deal with prices increase. The demand for currency increased by 28% in 2008 against 9% in 2007, while banks deposits increased only by 6.4% against 35% in 2007.

Consequently, the commercial banks could not sustain high rhythm of credit distribution, most of them even stopped for some time financing risky activities like mortgage industry, while they implement aggressive policy to collect deposits.

Fig 7: Broad Money behavior (in RWF billion)

Source: Statistics Department

On the demand side, it is worth to note that most of the banks saw their main customers with investments projects breaking their deposits, to import equipments or investing abroad.

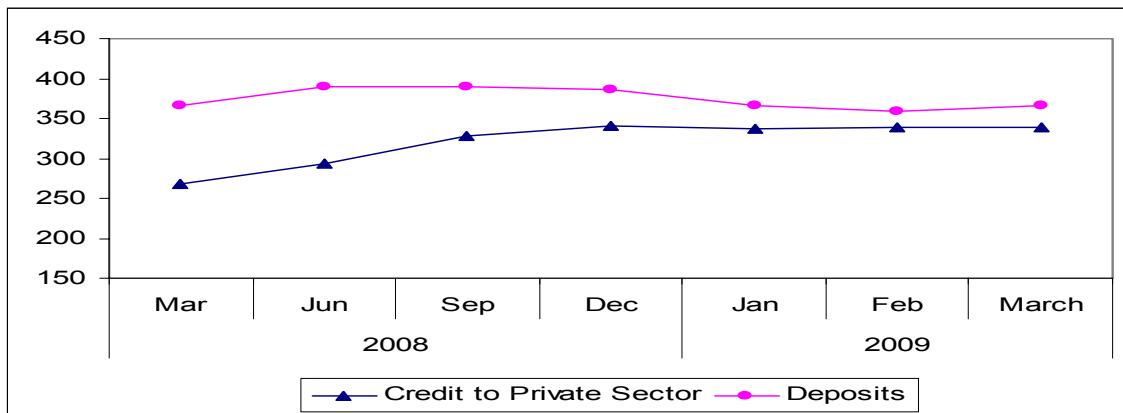

Concerning the currency in circulation, it recorded a continuous decrease during the first quarter 2009. Between December 2008 and March 2009, it declined by 18%. This trend is first a seasonal phenomenon when currency in circulation declines at the beginning of each year, following its highest level during the period of Christmas and New Year festivities. However, the high magnitude of the decline was abnormal due mainly to the decline in credit to private sector, with an important delay in coffee campaign financing and a slowdown in economic activities, particularly in construction sector.

Table 6: Broad Money (in RWF Billion)

	2008				2009			Change Mar 09/Dec. 08	
	Mar	Jun	Sep	Dec	Jan	Feb	Mar	%	Amount

Source: Statistics Department

Fig 8: Credit to private sector and deposits in the banking sector (in RWF billion)

Source: Statistics Department

IV.2. RESERVE MONEY

The downward trend of the monetary aggregate was also reflected in the evolution of reserve money during the period. In fact, following the same reasons as developed earlier, reserve money stood at RWF 112.3 billion at end March 2009 against RWF 114.5 billion at end December 2008, which is a decline of 1.9%. In the same time, Central Bank Net Credit to commercial banks went up at RWF 0.9 billion by end March 2009, from RWF -15.1 billion at end December 2008, reflecting an injection of liquidity in the system amounting RWF 16.0 billion during the period under review.

V. PUBLIC FINANCE AND DOMESTIC DEBT

V.1 PUBLIC FINANCE

Fiscal policy in the first quarter of the year 2009 remained focused on improving the Government's financial position while international economic context continued to be dominated by the global financial crisis with its negative impact on Rwandan economy.

During the first quarter of 2009 Government total tax revenue and grants has been much lower (RWF -48.9 billion) than the quarterly target, while total expenditure and net lending were above the programmed level by RWF 12 billion. The underperformance on revenue side is explained by a big delay in budget support disbursements expected during the first quarter of 2009. However, with respect to overall government spending, there has been an increase of RWF 9.9 billion in total expenditure as compared with the program for the first quarter of 2009.

Table 7: Government financial operations (RWF billion)

	Q1 2008 Actual	Q1 2009		Absolute change	
		Target	Actual	Q1-09/Q1-08 Actual	Actual Q1-9/ Target Q1-09

Of which banking system		-15.6	23.4	23.4	39.0

Source: Ministry of Finance and Economic Planning, 2009

In terms of budget deficit, Government registered an overall budget deficit before grants and on payment order basis of RWF 89.6 billion. Including grants the overall budget deficit achieved RWF 51.0 billion. Also, on cash basis the deficit became RWF 45.8 billion. Further, there has been an important accumulation in government arrears amounting RWF 5.2 billion RWF.

V.1.1 Government Revenue

The Government revenue achieved RWF 132.5 billion in the first quarter of the year 2009 against a program target of RWF 182.4 billion, reflecting a decline in grants as above mentioned. Indeed, disbursed grants were less than programmed (that is RWF 38.5 billion against 87.8 billion). In terms of tax revenue, higher tax revenue collection also reflected the concerted efforts made by the Government to broaden tax base. During the review period, the proportion of tax revenue to government revenue remained at a high level of 69%. This ratio was 50% at the end of the year 2008. Categories of tax revenue (direct taxes, taxes on goods and services, taxes on international trade) increased and resulted in larger shares of 33%, 49%, and 14% of total revenue respectively.

Favorable business performance and further improvements in the tax collection machinery contributed to the increased domestic revenue from corporate income tax. Several incentives were introduced in 2008 to promote private sector investment activity and to reduce the corporate tax burden. Measures taken by Rwanda Revenue Authority (RRA) included enhancing its services and intensifying collection efforts through stricter enforcement.

The Government continued to emphasize efficiency and effectiveness in its financial management by streamlining tax measures, improving tax administration and intensifying collection efforts.

Since the year 2008, major sources of indirect taxes recorded a strong growth, reflecting stronger domestic aggregate demand during the year. Excise duties receipts were significantly higher due to continued high demand. The tax revenue continued to rise in line with long-term objective of gradually widening the tax base as compared with program target.

During the first Quarter 2009, collection from nontax revenue achieved RWF 2.9 billion. Its share to total revenue remained favorable 2% against 8% in 2008 and 3% in 2007. The

performance of nontax revenue came mainly from National Bank of Rwanda dividends, strategic stock for petroleum products and other dividends.

Certainly grants showed a downward trend but remained an important proportion in Government revenue. Grants have been in the form of budgetary supports (30%) and capital grants (70%). Therefore, external financial assistance continues to have an important place in Government's source of financing.

V.1.2 Government Expenditure

Government expenditure achieved 183.6 billion RWF in March 2009. As the private sector is the main engine for growth, the overall thrust of the Government's expenditure was to strengthen the fundamentals of the economy and to increase the private sector's resilience. In managing expenditure, emphasis was placed on enhancing efficiency to ensure more efficient allocation between economic types of expenditure (capital expenditure versus recurrent expenditures such as wages and salaries, purchases of goods and services, debt interest, etc); to ensure more effective allocation between functions of government (education, health, transport, agriculture and rural development; to ensure more equitable or pro-poor allocation. Operating expenditure share to total expenditure remained important as it represented 63% in 2007, 58% in 2008 and 61% in March 2009.

Composed mainly of wages and salaries, expenditure on goods and services, exceptional social expenditure, interest payments and transfers, the recurrent expenditures have been more affected by salaries and wages (20%), transfers (41%) and purchases of goods and services (23%).

Capital expenditure has a vital contribution to make socio-economic development. In this context, Rwanda has always accorded high priority to capital expenditure, and has followed the ruling that the growth rate of capital expenditure should be higher than the growth rate of recurrent expenditure. During the first Quarter 2009, capital expenditure achieved RWF 70.6 billion and has been equally financed by domestic and external resources, but its share to total expenditure decreased from 42% in 2008 to 39% for the first Quarter of 2009. However, Capital expenditure has increased significantly faster than current expenditure. The focus of development expenditure was to enhance longer-term productivity and competitiveness, while supportive further economic activity.

Composed primarily of loans to public enterprises minus the reimbursements by those enterprises, net lending and privatization receipts reached RWF 3.7 billion during this review period of the year 2009.

V.1.3 Budget Deficit

In terms of current deficit, Government financial position achieved a deficit of 86.2 billion RWF. This trend reflects an increase in Government operating expenditure (especially transfers, wages and salaries, etc) early in the year 2009.

In line with tax collection efforts and external assistance, the Government financial transactions achieved an overall deficit after grants of 51.4 billion RWF. In terms of overall deficit before grants, it is important to notice that the deficit has been 89.6 billion RWF. However, on cash basis government financial transactions remained achieved a deficit of 45.8 billion RWF in the first quarter of the year 2009.

V.1.4 Financing of the deficit

The overall surplus, cash basis of RWF 45.8 billion in March 2009 was, most importantly, financed by domestic resources rather than external resources, in particular from the banking system which alone provided RWF 23.4 billion against RWF 7.7 billion from foreign financing. Further, nonbanking sector has not contributed in the financing of the deficit.

Table 8: Financing (billion RWF)

	Q1, 2008 Actual	Q1, 2009		Absolute change	
		Target	Actual	Actual Q1- 09/Q1-08	Q1-09/Target

V.2 DOMESTIC DEBT

By end March 2009, the outstanding Government domestic debt increased from RWF 149.3 billion by end 2008 to RWF 151.4 billion. The bulk of funding was mainly raised from nonbanking sector (57%), especially from Social Security Fund (SSF) with a big portion of 70% out of a total financing from the nonbanking sector of RWF 82.7 billion.

Also, domestic debt is in the form of an existing total amount of RWF 39.7 billion representing a share of 27%, from National Bank of Rwanda as a consolidated debt. Further, Government raised a certain amount from the banking sector essentially by issuing Treasury bills and bonds.

Table 9: Domestic debt developments (billion of RWF)

Source: BNR, Research and Policy Analysis Department

During the review period, the Government reduced its loans with regard to the nonbanking sector and the banking sector. Hence, the domestic debt in Treasury bills subscribed by the commercial banks substantially decreased. At the same time, the domestic debt in Treasury bills with nonbanking sector decreased from RWF 2.7 to 0.2 billion between December 2008 and March 2009.

Further, the category "other" remained important. This category primarily includes the debt vis-à-vis the Social Security Fund of Rwanda (under development bonds, arrears of the contributions of the civil service staff and the penalties). Loans from Social Security Fund represented an important share in the whole nonbanking sector.

VI. LIQUIDITY MANAGEMENT AND INTERESTS RATES

VI.1 MONEY MARKET OPERATIONS

The banking system experienced tight liquidity conditions during the first quarter and BNR was called to intervene by injecting liquidity in January 2009. In the framework of mitigate the situation, BNR has decided to review the reserve requirement ratio from 8% to 5% on February 06th 2009. In addition, BNR has introduced the medium and long term refinancing facilities against Treasury Bonds or Foreign Exchange reserves given as collaterals.

The REPOs market was quite within six weeks in order to allow banks to run their business. Thereafter, BNR has reintroduced the mopping up operations since the second week of March. The following tools were used in this first quarter: REPO & reverse REPO operations and refinancing window.

Table 10: Money Market Operations (In Billion of RWF)

	4TH QUARTER 2008	JANUARY 2009	FEBRUARY 2009	MARCH 2009
INTERBANK TRANSACTIONS	95,700	92,400	50,310	52,700
REPO TRANSACTIONS				
TOTAL BIDS	447,100	14,250	7,600	123,000
RETAINED AMOUNT	399,450	12,850	2,000	63,450

OFFERED AMOUNT	--	8,700	--	--
REFINANCING WINDOW				
TOTAL BIDS	--	3,500	--	
OFFERED AMOUNT	--	3,100	--	--

Source: Financial Markets Department

Within the first quarter of 2009, the interbank market transactions increased significantly compared to the trend recorded last year. On March 31st 2009, the volume of transactions totalled RWF 195.41 billion while it was RWF 4.05 billion for the same period and RWF 169.24 billions the whole year 2008.

Concerning the Government securities, the money market did not record any operation of T-bills during the first quarter of 2009. That was the Government decision to not rolling over the T-bills maturities in order to release the liquidity in favour of the banking system. Today, T-bills outstanding totalled RWF 7,108.8 million while it was RWF 16,580.4 millions.

Table 11: Treasury bills outstanding (in million RWF)

Period	Dec 31 st 07		Dec. 31 st 08		Mar 31 th 09	
	Institution	Budget support	Monetary policy	Budget support	Monetary policy	Budget support

Tot Gen	58,238.60		9,389.50		222.00	

Source: BNR, Financial markets Department

VI.2 INTEREST RATES

Given the change of inter-bank corridor on January 19, 2009 from] 6.75 9.25[to]8 10[and tightness of liquidity conditions, the interest rates increased on money market. Therefore, since March 5, 2009, the interbank market has recorded the transactions done below the floor of the interbank corridor. At end march 2009, the lowest rate recorded was 7% for 11 deals totalling RWF 5,950 billion.

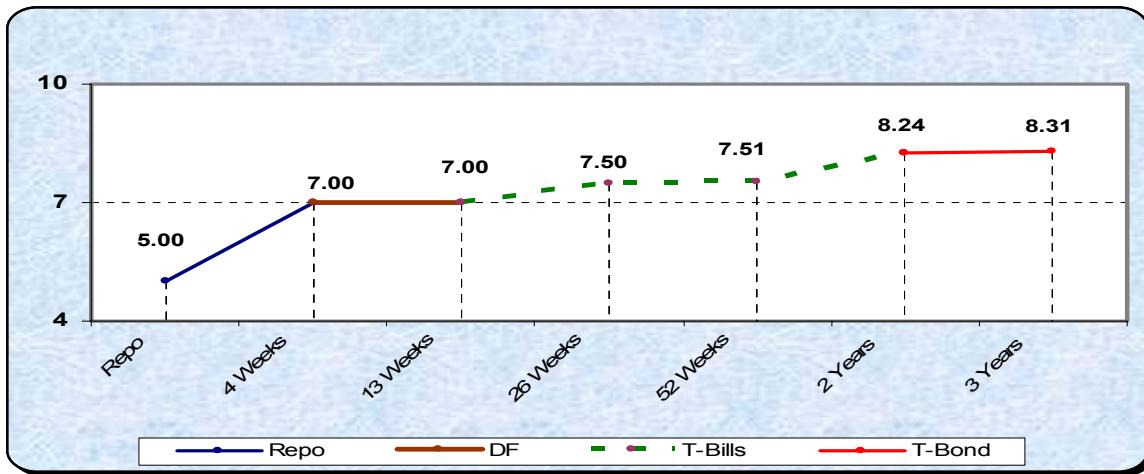

Table 12: Interest rate developments (WAR in %)

	2008			2009		
	Oct.	Nov.	Dec.	Jan.	Feb.	Mar 31 st
Repo rate	6.45	6.52	6.56	7.28	6.50	5,33
Interbank market rate	6.42	7.08	7.69	8.67	9.15	7,49
Refinancing rate	11.25	11.25	11.25	12.87	--	--

Source: Financial markets Department

Concerning the yield curve, the Repo rate decreases after reducing the reserve requirements ratio (Feb 2009) while it increased in last quarter of year 2008. The 4 weeks deposit facility; 13 weeks T-bills and 26 weeks T-bills rates are not recorded in this period of year 2009. The last refinancing rate and Reverse Repo rate recorded are in January.

Fig 9: Yield curve in %, March 2008

Source: Financial Markets Department

VI.3 CAPITAL MARKET OPERATIONS

Apart from the three issuances of Government Bonds (2 of 2-years and one of 3-years) and a 10 -year BCR bond which took place in 2008, there was no other issuance operation on the Capital Market. These issuances were issued with periodic interest rate of 8%; 8.25% and 9% per annum respectively. All these bonds are listed on the Rwanda OTC market.

Trading operations commenced on 31st January 2008 at the launch of the Capital market. During the first quarter of 2009, only 1 deal worth RWF 300,000 was transacted.

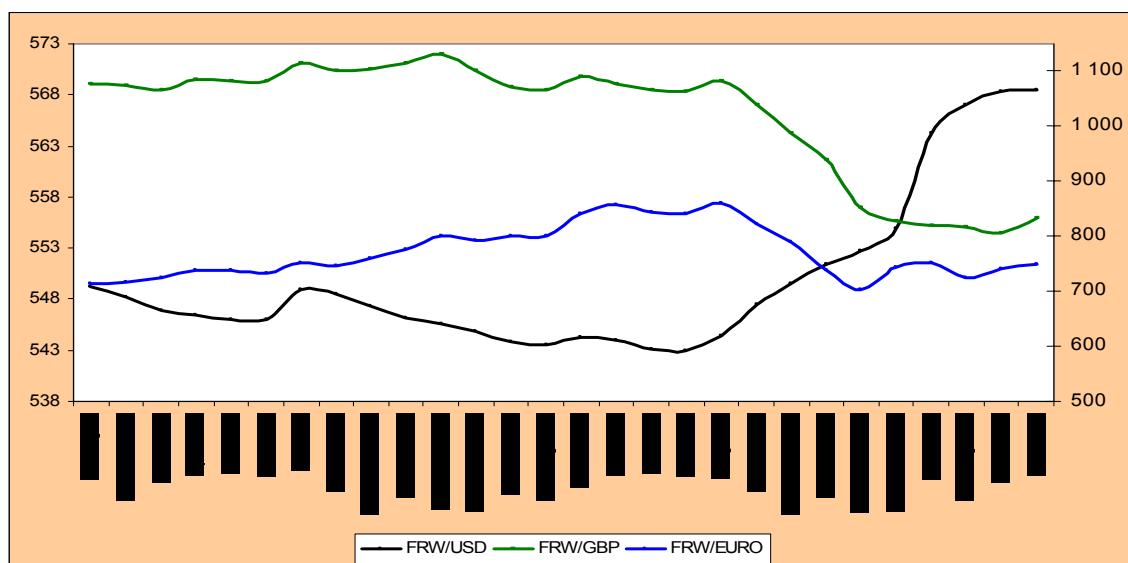

VII. EXCHANGE RATES AND FOREIGN MARKET OPERATIONS

VII.1 EXCHANGE RATE

Following a continued depreciation of Rwandese franc against the US dollar in 2008, first quarter 2009 depicts a continuous weakening of Rwandese franc against the dollar, registering a depreciation of 2.68%. The Euro and GBP depreciated against the RWF during the same period in the following proportions; 0.77% (from 743.8715 to 738.1458), and 1.55% (from 828.3540 to 815.5479) respectively.

This depreciation of Rwandese franc against the USD dollar was however observed since mid June 2008 and is due to the appreciation of the USD on international forex market, while before then, the RWF was appreciating vis-à- vis USD. In view of the mixed outlook on the exchange rate, the BNR maintained its policy of selling forex in the exchange market. The exchange rates of Euro and the GBP vis-à-vis the RWF was marked by frequent fluctuations with appreciation and depreciations offsetting each other, but with a general tendency of depreciation. It can be noted that these fluctuations are due to the nature of the two currencies on the international forex market.

Graph 10: Evolution- Exchange rate of RWF against major international currencies

Source: Financial Markets Department

The behaviour of RWF vis-à-vis foreign currencies is mainly supported by the satisfying levels of accumulated forex reserves in the banking system, from the external budget support that Rwanda benefits, the export sector that is picking up and the private transfers in favour of residents.

Tableau 13: The Evolution of Average Exchange rate of RWF against USD, EUR and GBP

VII.2 FOREIGN EXCHANGE MARKET OPERATIONS

Foreign exchange sales by the BNR to its clients decreased during the first quarter of 2009. This tendency is explained by the internal demand from importations that also decreased in relation to the same period in 2008.

Tableau 14: BNR's Forex Revenue and Expenditure (in millions of USD) in January-April, 2008-2009

	January-April		Annual Change	
	2008	2009	Amount	%
Reserves -at the beginning of the month	506.21	553.99	44.34	8
Revenue	199	88.63	(110.37)	(55.5)
Of which: Budget support	112.84	26.29	(86.55)	(76.7)
Govt projects	25.03	24.45	(0.58)	(2.3)
Expenditure	172.22	176.78	4.56	2.6
Of which: Gov't spending	40.79	45.84	5.05	12.4
Non bank clients	17.34	21.34	4	23.1
Sales to banks	73.96	74.7	0.74	1
Net reserves-month end	546.63	495.18	(51.45)	(9.4)

Source: Financial Markets Department

The forex sales to banks is likely to registered a surplus of USD 0.74 million during the first quarter of 2009 in comparison to the same period of 2008 i.e. an increase of 1%, from USD 73.96 to 74.7 million. For the Government expenditure, the first quarter of 2009 depicts an increase from USD 40.79 million in 2008 to 45.84 million.

VIII. FINANCIAL SECTOR SOUNDNESS

VIII.1 BANKING SECTOR

During the first quarter of 2009, the consolidated balance sheet of 8 commercial banks indicated a slight activity decline of 1.5% compared to December 2008, mainly due to the reduction of loan portfolio by 3.3%. The total assets decreased from 511 billion Rwf as at December 2008 to 504.1 billion Rwf as at end March 2009.

The quality of banks 'aggregated loan portfolio deteriorated. Impaired assets increased over the first quarter of year 2009 up to 50.6 billion Rwf from 47.9 billions Rwf as at end December 2008.

The loan portfolio quality, of the banking industry as measured by the non performing loan ratio increased from 11.6% to 13.9% this quarter. This ratio stood at 10.4% if we do not take in account the interest in suspense.

Based on March 2009 figures, 4 commercial banks' NPLs ratios are above the 10% required.

In terms of banks' capital adequacy, the banking system equity overall has improved since 2008 as a result of the increase in share capital of commercial banks from 1.5 to 5 billions Rwf since 1st January 2008.

The consolidated solvency ratio was 19.1% against 15.6% in the previous quarter. The improvement is due to the inclusion of a new bank which was licensed in 2009 coupled with the decrease of risk weighted assets.

With regard to the profitability, the banking sector (8 Commercial banks) posted a consolidated net profit after tax amounting to 2.07 billions Rwf. Compared with 3.67 billions Rwf as at March 2008, there is a huge deterioration due to the loss reported by 2 commercial banks amounting to 0.69 billion Rwf and profit decrease of 50.7% for 3 commercial banks.

As result, the annualized return on average equity increased from 10.8% in March 2008 to 11.8% as at March 2009 and the return on assets stood at 1.7% against 4.9% in March 2008.

Concerning liquidity, banks experienced liquidity problem during the first months of 2009, however, there has been an improvement.

With regard to the supervision of banks, the risk based supervision will continue to be reinforced while qualitative and quantitative information from banks are assessed in order to draw risk profile for each bank which will help to detect and address as quickly as possible areas of weaknesses.

VIII.2 MICROFINANCE SECTOR

A law establishing the organization of microfinance activities has been adopted by the Parliament and published in the Official Gazette. It is the Law N° 40/2008 of 26/08/2009 published in the Official Gazette N° 13 of 30/03/2009. The implementing regulations of this Law has been signed by the Governor and sent to the services entitled to be published in the Official Gazette.

Two microfinance funds, the capacity building fund and the refinancing fund were put in place to assist in training directors and managers of MFIs and in refinancing Microfinance Institutions' activities that have a significant impact on poverty reduction, respectively.

Decisions on such support are in the implementation phase and the New Association of Microfinance institutions which will assist the Government in monitoring the programmes planned for the microfinance sector has set up its permanent office headed by an Executive Secretary.

Licensing new micro finance units, as well as the offsite and on site inspections are the main ongoing actions in this sector.

The activity in the microfinance sector has been consolidating during the first quarter of 2009 with 4.8% increase in total assets, 3.5% increase in total deposits, 5.4 % increase in total outstanding volume of credit from December 31, 2009 to March 31, 2009. The loan portfolio have deteriorated with an increased delinquency rate moving from 5% at the end of December 2008 to 6% at the end of March 2009.

Table 15: MFI consolidated financial position (in million of RWF) *

Item	31/12/2008	31/03/2009	Change (%)
Assets	60 134	63 001	4,8

Solvency ratio	27%	27%	

Source: Microfinance Supervision Department

The solvency ratio fixed at 27% at the end 2008 remained unchanged at the end of the first quarter.

IX. APPENDICES

IX.1 TECHNICAL NOTES ON THE MONETARY STATISTICS

The data of the money sector published in this bulletin are established in accordance with methodology of the Monetary and Financial Statistics Manual published in 2000 by the International Monetary Fund.

Assets and liabilities are presented by types of financial instruments; then a break down of the position of each financial instrument in its principal sectors of the economy is made.

The purpose of the monetary statistics is to build the monetary aggregates of the national economy.

DEFINITIONS

1. FINANCIAL INSTRUMENTS

1.1 Financial assets

1.1.1 Monetary Gold: gold held by the central bank as part of official reserves. The gold which does not form part of the official reserves is classified like non-financial asset.

1.1.2 SDR: international reserves assets issued by the IMF and allocated to members to supplement existing official reserves. SDR holdings represent unconditional rights to obtain foreign exchange or other reserve assets from other IMF members.

1.1.3 Currency: notes and coins of a fixed nominal value, issued by the central banks or governments, and having legal tender within the national economy.

1.1.4 Foreign currency: notes and coins issued by non-residents and representing liabilities of central banks or governments in other countries.

1.1.5 Transferable Deposits: include all deposits that are (1) exchangeable on demand at par and without penalties or restrictions and (2) directly usable to make payments by check, draft, giro order, direct credit/debit or other direct payment facility.

1.1.6 Other deposits: comprise all claims other than transferable deposits, which are represented by evidence of the deposits.

This is the case for sight deposits that permit immediate cash withdrawals but not of direct third-party transfers, savings and fixed-term deposits, non transferable deposits denominated in

foreign currency, shares or the similar titles issued financial corporations, shares of money-market mutual funds that have restrictions on transferability.

1.1.7 Securities other than shares: negotiable instruments serving as evidence that units have obligations to settle by means of providing cash, a financial instrument or some other item of economic value. Some common types of securities are government treasury bills, the government bonds, corporate bonds and debentures, commercial paper and certificates of deposits issued by depository corporations.

1.1.8 Loans: financial assets that are created when (1) a creditor lends funds directly to a debtor and (2) are evidenced by non-negotiable documents.

The valuation of loans and deposits is an exception to the valuation principle based on market price or fair value. Loans and deposit values are hence based on creditors' outstanding claims without adjustments for expected loan or deposit losses.

I.1.9 Shares and other equity: instruments and records acknowledging, after the claims of all creditors have been met, claims on residual value of a corporation. This category includes proprietor's nets equity in quasi-corporations, as well as shares and equity in corporations.

1.1.9 Shares and other equity: instruments and records acknowledging, after the claims of all creditors have been met, claims on residual value of a corporation. This category includes proprietor's nets equity in quasi-corporations, as well as shares and equity in corporations.

1.2 Liabilities

1.2.1 Currency: see definition in 1.1.3

1.2.2 Deposits included in broad money: transferable deposits and other deposits issued by resident depository corporations and included in the national definition of the broad money.

1.2.3 Deposits excluded from broad money: transferable deposits and other deposits which are not included in the national definition of broad money. This category includes all deposits of the central government, depository corporations and non residents.

1.2.4 Securities other than shares included in broad money: negotiable instruments included in the national definition of broad money, and held by sectors designated as holders of the currency.

1.2.5 Securities other than shares excluded from broad money: negotiable instruments which are not included in the national definition of broad money. This category includes securities other than shares held by central government, depository corporations and non residents, as well as securities other than shares held by other sectors and which are not included in broad money.

1.2.6 Loans: comprise credits and advances granted by various sectors

1.2.7 Shares and other equity: category including:

.Funds Contributed by owners: total amount from initial and any subsequent issuance of shares, stocks or other form of ownership of corporations and quasi-corporation.

.Retained earnings: after tax profits that have not been distributed to the shareholders or appropriated as general or special reserves.

- . **Results of the period:** cumulated profits or losses, if these benefits or losses are not taken into account in the retained earnings.
- . **General and special reserves:** appropriations of retained earnings.
- . **SDR allocation:** counterpart of the SDR provided by the IMF to the central banks.
- . **Valuations adjustments:** net counterpart to changes in value of assets and liabilities on the balance sheets of financial corporations, excluding those changes in value that are recorded in net profit or loss for the period.

2. SECTORS OF THE ECONOMY

The main sectors of the domestic economy are the financial corporations, non-financial corporations, government units, households, non-profit-institutions.

Financial corporations: comprise the central bank, deposit money banks, non bank depository institutions, other financial corporations, insurance companies and pension funds, other financial intermediaries and financial auxiliaries.

Non-financial corporations: include public and private non-financial corporations.

General government: are legal entities that are established by political process and have legislative, judicial or executive authority over other institutional units within a specific area. They include central government, local governments and the social security funds.

Households: consist of individuals, families, or other groups of persons who share the same living accommodation, pool some or all of their income and wealth, and consume some goods and services collectively.

Non profit institutions: legal or social entities, created for the purpose of producing goods and services, whose status does not permit them to be a source of income, profit, or other financial gain for the units that establish, control or finance them

For the presentation of the monetary statistics, households and non-profit institutions are combined to make the position "other resident sectors".

3. BROAD MONEY LIABILITIES AND THEIR COUNTERPARTS

3.1 Broad money liabilities

Broad money liabilities comprise currency out of depository corporations, transferable deposits and the other deposits held by other domestic sector with the monetary system, excluding those held by central government. The definition of each component is in section I.

3.2 Counterparts of broad money

These are claims corresponding to broad money. Four types of them exist:

3.2.1 Net foreign assets: total amount of foreign assets less foreign liabilities of the money sector.

3.2.2 Net credit to government: total assets of the central government less it's liabilities towards the banking sector.

3.2.3 Claims on other sectors: total assets held by the banking system corresponding to the liabilities of domestic sectors other than the central government and other depository corporations. They form the main component of broad money counterparts.

3.2.4 Other items net: denotes a residual category for other liabilities less other assets, where other liabilities includes all liabilities not included in broad money.

4. Rates

4.1. Lending rate: is the interest rate charged by the banking sector on the loans they grant to the customers.

4.2. Deposit rate: is the interest rate paid by the banking sector on deposits or funds collected from the depositors/lenders.

4.3. Inter bank rate: is the interest rate charged by the banks to their colleagues, and negotiated freely on the interbank market (one of the compartments of the money market).

4.4. Rate of the money market: is the interest rate charged or paid by the central bank during its operations of open market.

4.5. Discount rate: is the interest rate at which the central bank lends its money to commercial banks facing short term needs of cash.

4.6. Rate on the market of the Treasury bills: is a weighed average resulting from the operations of tender on the Treasury bills market over a given period.

4.7. The central bank's rate: is the maximum interest rate that the Central Bank is ready to pay for its seven days' mop ups of cash or the minimum interest rate it is ready to accept for cash loans to commercial the banks if the banking system fall illiquid.

(1) Il s'agit de la créance provisionnée sur la banque du Zaïre

N.B. 1. Les provisions pour risques et charges sont classées dans les autres passifs et non dans les fonds propres

2. La participation de la BNR dans la SIMTEL est classée dans le crédit aux autres sociétés non financières conformément à la méthodologie du MSMF

3. La décote de titres en monnaies étrangère est classée dans la réévaluation, de même que la fluctuation du cours de change
