Executive Summary

Rwanda's economy in 2003 developed in an unfavourable international economic environment linked mainly to the poor performance of capital markets and the rise in energy prices, a consequence of the geo-political situation in Iraq, among other things. However, the country registered an economic growth rate estimated at 3.4% in real terms, though this represents a significant drop compared to 9.4% recorded the previous year and the performance of the first two years of the Poverty Reduction and Growth Facility (PRGF) programme.

Despite the significant progress made in the secondary and tertiary sectors, the real sector of the economy was characterized by poor performance in agriculture as a result of unfavourable climatic conditions recorded in 2003, with disastrous consequences for some regions of the country such as Bugesera which was hit by famine. Food supplies declined considerably in several households in Rwanda, total production of food commodities having dropped from 7.1 thousand tons to 6.8 thousand tons against a continuously growing population.

In this context of poor agricultural production, supply of local food products remained low for almost the whole year and, coupled with the high cost of our imports from Europe (pharmaceuticals, alcoholic drinks and children's food) as a result of the appreciation of the Euro, inflation was higher during 2003 compared to the previous year.

In spite of the low growth level of GDP, public finance enjoyed considerably better conditions in services and in public works and construction (PWC) compared to agricultural activities. In nominal terms, tax revenues and non tax revenues increased by 20.8% and stood at RWF 122.3 billion compared to 101.2 billion the previous year, thanks to the efforts made in tax collection by Rwanda Revenue Authority.

However, fiscal deficit worsened considerably to 5.5% of GDP against 4.2% in 2002 due to the high current expenditures which rose from RWF 134.6 billion or 16.6% of GDP in 2002 to RWF 163.8 billion or 19.8% of GDP, mainly due to expenses associated with the end of the political transitional period.

Parallel to the deterioration of public finance deficit, the current external deficit deteriorated also, contributing sharply to the depreciation of RWF against hard currencies. Total balance of payments fell from a positive to a negative balance between 2002 and 2003. This situation was a result, on one hand, of the reduction by about 13.8% of the capital and financial operations account and, on the other, of the trade in goods and services the balances of which fell by 14.0% and 13.6% respectively. The country's exports recorded a big decline from a FOB value of 67.4 to 63.1 million US\$ between 2002 and 2003, against imports which increased from 204.1 to 217.7 millions US\$.

Total deficit of the balance of payments was financed to a large extent through the reduction of official reserves of the Central Bank to 5.6 months of imports of goods and services, while for the year 2002, the level of this indicator represented 7 months of imports. It should be pointed out that the country received exceptional financing consisting of debt rescheduling by Kuwait Fund and debt service arrears were written-off by some bilateral donors.

Concerning the monetary sector, it is worth noting that public finance in 2003 and the mode of its financing seriously threatened the country's monetary stability, due to increased demand for domestic

financing of an inflationary nature. The exceptional increase in funding of the economy resulted in considerable monetary expansion, thus contributing to the rise of inflation estimated at 7.7% against the annual target of 4.4%. Money increased at an estimated rate of 16.1% compared to 9.2% envisaged in the monetary programme for the year. In this context, National Bank of Rwanda was compelled to increase its interventions mainly in the money market in order to keep the development of the liquidity of the banking system within limits.

With regard to its principal missions, the Bank ensured better monetary policy implementation with a view to preserving the value of the national currency and ensuring its stability. In 2003, it implemented a prudent monetary policy which was adapted to the economic conditions of the time, so as to support the Government's economic policy as defined in a comprehensive and coherent macro-economic framework.

In the field of foreign exchange, the Bank organized and managed carefully the exchange market by spelling out clearly the conditions governing exchange operations, in order to maintain the external stability of the Rwandan franc. In this regard, street money changers were organized into associations which were established and authorized by NBR. NBR's periodic interventions on the foreign exchange market aimed at meeting to the extent possible foreign exchange demand of commercial banks and other partners.

Concerning money issuing related activities, several actions were carried out by the Bank, such as the supply of banknotes and coins, the issue of new banknotes and the destruction of notes unfit for circulation, with a view to ensuring sound management of money in circulation. And in conformity with the decision of the Government to issue new currency symbols bearing the new coat of arms of the Republic, NBR initiated an intense activity of replacing banknotes and coins in circulation. Thus in 2003, a new RWF 100 banknote was put in circulation, as will be new banknotes of RWF 5000, 1000 and 500 as well as new coins in 2004. Other activities, including clearing house operations, importation of foreign currency and banknotes counterfeiting control - an operation carried out in collaboration with the National Police - were successfully implemented.

With regard to the management of foreign exchange reserves, the Bank adopted a new investment policy, 'Investment Guidelines', for foreign currency resources under its management. In order to realize a better output, the Bank carried out a reform of the operations framework of its Investment Committee and, with the support of Crown Agents, developed an advanced training programme for its employees responsible for investment in investment strategies on the international capital market.

The Bank fulfilled its statutory mission of supervising and monitoring the banking and financial system through surveillance activities (documents-based monitoring and on the spot inspection), strengthening the regulations, restructuring the Bank, streamlining banks' credit portfolio, documents-based and on the spot inspection of micro-finance institutions. The Bank strove particularly to restore the credit culture by putting in place an interbank mechanism aimed at limiting banking facilities for non performing borrowers. Finally, banks in financial difficulties were placed under strengthened supervision.

Within the framework of the modernization of the National Payment System, NBR has already developed a business plan for the Interbank Company for Electronic Banking and Clearing (SIMTEL). Likewise,

preparatory activities for the launching of the bank credit card payment operations have been accelerated and this facility might start in 2004.

With regard to the organization and management of the Bank, changes were effected and important reforms were carried out in different statutory organs in the administrative and social policy field and in training. The existing structure was not coherent with the changes made by the Bank since the introduction of important reforms in the field of financial liberalization in 1995. A new job classification was carried out and a new salary scale was put in place, based on job profiles. Likewise, new staff rules of the Bank were adopted, together with a logo for National Bank of Rwanda.

In order to continue building human resource capacity, the Bank's training policy was reviewed and priority was given to professional training courses in relation to the principal mission of the Bank. In this connection, 10 employees were admitted to the School of Banking and Finance to take vocational courses in accounting, and 7 others are doing a Masters Degree course in Finance and Banking at the same institute. Two other employees are studying a Masters Degree in other institutes. The Bank also financed short-term courses for some of its employees, locally or abroad.

Important actions have been carried out with regard to the Information and Communication System, including upgrading the computer network and BANKNET project: an interbank communication system. Through this system, the Bank will be able to improve the quality and the speed of the exchange of data with its different partners. At the same time, NBR has launched a project aimed at developing a procedures manual for all its operations, an exercise scheduled to be completed in 2004.

With a view to resolving security related problems, the Bank decided to put in place a comprehensive security system consisting of video-surveillance, anti-intrusion and fire detection. With regard to auditing of the Bank's operations, NBR, following the January 2003 restructuring, decided to set up an Internal Audit Department with the mission of ensuring control of the Bank's operations through a risk-based audit carried out in full autonomy and independence, in accordance with internationally recognized norms and good audit practices.

In February 2003, an IMF Safeguard Assessment Mission carried out a diagnosis of the appropriateness of NBR's safeguards. This diagnosis covered fields such as external audit mechanism, legal framework and independence of the central bank, financial information practices and internal control system. This exercise highlighted a number of weak points, and the mission made recommendations of priority measures to be taken in order to improve the situation.

In addition to this, the Mauritius-based audit firm, Grant Thornton (Indian Ocean) Limited, audited the financial statements and accounting procedures of NBR in 2003 for 2001 and 2002 financial years. Implementation of all these recommendations continues and has contributed positively to the improvement of internal control operations and the reporting of the Bank's financial statements. Moreover, NBR has chosen to apply international accounting standards (IAS) and from 2004 financial year, its financial statements will be prepared and presented according to these international standards.

During the financial year under review, however, NBR's activities were carried out in an unfavourable working environment, especially for investment operations on international capital markets. Between

end December 2002 and end December 2003, interest rates dropped from 1.25% to less than 1% per year for the US dollar, from 2.75% to 2% per year for the Euro, and from 3.75% to 3.37% per year for the British pound.

In addition, 2003 financial year registered a sharp depreciation of the national currency against foreign currencies. The RWF depreciated by 13.36% against the US dollar, 36% against the Euro, 23.28% against SDR and 25.5% against the British pound.

However, despite this difficult operating environment, 2003 ended with a better result than the previous year due mainly to an intensive utilization of arbitrage and a highly positive fluctuation of foreign exchange rates. The net result for the financial year increased to RWF 5.463 million against RWF 2.655 million at the end of 2002, a level that has never been attained since 1995.

In accordance with the decision of the Board of Directors of the Bank, total result on exchange rate fluctuations was allocated to the reserve account for foreign exchange rate fluctuations. In conformity with the NBR Statute, the balance, amounting to RWF 1.504 billion, was allocated to the General Reserve Fund (20%), the emoluments of the members of the Board of Directors (1%), the Social Fund (15%) and the Government Treasury Account. A sum equal to RWF 1,007,261,581 was thus paid into the Government Treasury Account against RWF 1,613,163,078 of dividends in 2002.

Chapter I: International Environment

I.1 Economic situation

The world economic growth registered a slight improvement in 2003 of about 3.2% against 3% in 2002. There was slackening of the economic activity at the beginning of the year, and this lack of buoyancy was linked to the mounting geo-political tensions generated by the Iraq conflict. Consequently, households and enterprises deferred their investment and consumption projects. However, despite this tense context, some economies picked up more quickly than others, in particular in the United States of America and, quite unexpectedly, the economy of Japan. On the other hand, the Euro zone continued to experience a gloomy economic activity.

In the United States, uncertainty linked to the situation in Iraq and the rise in oil prices restricted growth to about 2% during the first half of 2003 against 3% for the previous half. For 2003, the American economy grew at an estimated rate of 2.6% against 2.4% recorded in 2002. These developments are attributed to the improvement of household consumption, increased public consumption, coupled with the rise in defense expenditures. There was also improvement in investments and an increase in industrial production, making the American economy become once again the engine for the industrialized countries.

After the recovery recorded in 2002, the Japanese economy remained relatively sustained during the first half of 2003, resulting in a continued upward trend of exports. Indeed, imports grew more slowly than exports because of the gloomy domestic demand, but the difficulties experienced in the banking sector and the persistence of deflation did not facilitate maintenance of a strong and sustainable growth. In terms of annual average in 2003, Japan's economic growth was estimated at 2% against 0.2% recorded the previous year.

Concerning the Euro zone, economic activity slackened considerably and registered a low growth of only 0.5% in real terms, compared to 0.8% in 2002. This slowdown was linked to the appreciation of the Euro which affected external trade. In this connection, exports declined and foreign contribution to the growth of the Zone dropped markedly because investments registered a strong decline. Nonetheless, the improved economic climate in the United States was beneficial to some developed countries in the euro Zone, particularly Germany and France, due to the good performance of exports sustained by continued expansion of demand in the United States.

As for developing countries, they on the whole registered an economic growth rate of 5% against 4.6% in 2002, following the progress recorded by African countries and the western hemisphere, which consists of Central and South America, where real GDP grew by 3.7% and 1.1% respectively, compared to 3.1% and -0.1% in 2002.

In Latin America, the situation improved, particularly in Argentina where real GDP rose to about 6% after a disastrous year for the economy of this country which recorded a fall of 10.9% in real terms in 2002. However, the recovery was very gradual in this part of the world, particularly the Brazilian economy which was slowed down by high interest rates, especially the principal leading rates which were revised upwards so as to reduce the risk of inflation. In Venezuela, the stabilized situation in the oil sector led to considerable growth recovery.

The contrasting economic situation in the South and East of the Mediterranean was characterized by regional tensions. Economic activity in the region deteriorated and stood at 3.4% against 4.8% registered in 2002. For example, Israel's economy continued to be subjected to regional tensions which affected local and foreign investments as well as tourism. In this connection, the recession continued despite an external position which remained sustained.

Egypt's economy slackened due to the war in Iraq which affected tourism. However, passage fees in the Suez Canal and hydrocarbon exports yielded high revenues which led to the consolidation of the level of reserves. Since 2001, Morocco has experienced an exceptional period of favourable climatic conditions which contributed to the stabilization of GDP growth. Despite the uncertainty surrounding

tourism and the attacks of Casablanca in 2003, growth remained buoyant, driven essentially by domestic demand.

In 2003, particularly during the first half of the year, growth in Asian countries was affected by the fall in world demand, high oil prices and the SARS epidemic.

However, during the second half of the year, the mitigation of the effects of SARS led to the improvement of economic activity, with China being the growth engine in Asia. For some years, this country has in fact become a major player in international trade. On the whole, GDP growth of Asian countries, excluding China and India, was 3.4% against 6.4% if the two countries are included.

Table 1: Real economic growth in the world (in percentages)

*All Latin and Central American countries.

Source : IMF, World Economic Outlook, September 2003

Unemployment has been almost continuous since 2001. In the developed countries taken together, unemployment rate increased by 0.3% and stood at 6.7%. For most of the developed countries, the number of unemployed increased, accompanied by the low buoyancy of economic activity. In the United States and Japan, unemployment rate increased slightly from 5.8% and 5.4% respectively to 6.0% and 5.5% between 2002 and 2003. Though its unemployment rate increased slightly, Japan registered an increase of the active population and employment. For some countries, particularly Germany, France and Belgium, the rate of unemployment was high, exceeding by far the average of the developed countries.

Concerning inflation, even though it fell slightly in the European Union from 2.3% to 2.2% between 2002 and 2003, and despite its increase in the United States, all the developed countries still managed to contain the generalized increase of prices at 1.8% in 2003, compared to 1.5% the previous year. On the other hand, the deflationary spiral persisted in Japan with prices falling by 0.3% against 0.9% in 2002.

It is important to point out that the inflation observed in several countries of the world was mainly due to the increase in oil prices. The Brent crude oil prices per barrel fluctuated between 27 and 29 dollars, exceeding even 30 dollars per barrel some time in the year. This situation can be attributed to increased demand of industrialized countries and China, as well as to the decision of OPEC to reduce production. It should be pointed out that this situation affected the world trade of goods which registered a rise of 3% for the whole of 2003 against 3.3% in 2002.

I.2 Regional Environment

According to the 2003 economic report on Africa, the five regions of the continent recorded positive growth, though this was not the case for Southern Africa in 2002. The same report shows that Africa's economic growth which had slowed down slightly in 2002, recovered in 2003 at a rate of about 3.7%, driven by favourable world climatic conditions and a slightly improved international economic situation.

The economic environment of the member States of the West African Monetary Union was marked by a good agricultural season and a recovery of the major agricultural branches, following the amount and a good distribution of rainfall both in terms of space and time. Even in the Sahel countries, particularly Burkina Faso, Mali, Niger and Senegal, the trend of agricultural activity was favourable in general. However, the industrial sector in the Union registered uneven performance from one country to the other and from one field to the other, mainly due to the effects of the crisis in Ivory Coast.

Table 2: Economic growth of neighbouring countries and COMESA countries (in percentages)

Source: IMF, World Economic Outlook, September 2003

In the neighbouring countries and in the member countries of COMESA, there was general improvement of the economic activity, and Africa's performance on the whole can be attributed to the good results in some COMESA countries which recorded very high growth rates. These countries include Madagascar, Eritrea, Malawi, Tanzania, Uganda, Zambia, DR Congo and Angola. However, due to security problems or climatic difficult conditions, the economies of countries like Zimbabwe, Seychelles, Ethiopia and Burundi deteriorated compared to the year 2002.

I.3 Foreign Exchange Markets

International foreign exchange markets were characterized by the continued appreciation of the Euro against other major foreign currencies, particularly the American dollar. In fact, since its entry into force early January 1999, the single European currency reached its record level in 2003. It steadied at a parity of 1.12 dollars per Euro on average against 0.94 dollars the previous year.

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003(est.)

Table 3 : US\$ exchange rate against other major foreign currencies (in monetary units)

Source: FMI, World Economic Outlook, September 2003

The continuous appreciation of the Euro against other foreign currencies eroded the competitivity of Europe's exports sector. However, it should be pointed out that the Euro Zone received considerable inflows of international capital due to this appreciation.

As a result of good economic performance by Japan during 2003, the yen trend shows that it appreciated against the American dollar. In 2002, one American dollar was equivalent to 125.4 yens and in the following year, the American dollar fetched 118.6 yen.

I.4 Interest Rates and Capital Markets

With a view to sustaining the recovery of the economic activity, most developed countries lowered their interest rates during 2003.

In the United States, the Federal Reserve maintained its monetary easing, and its leading interest rate was revised downward from 1.2% to 1.0%. Since the beginning of the year, the Federal Reserve reduced its interest rate to the lowest level in the past 45 years. Likewise, BCE reduced its refinancing floor rate, thus maintaining the short term rate level close to zero in real terms. This easing of monetary conditions was nevertheless offset by the appreciation of the Euro. In relation to the American dollar, the Euro appreciated sharply during the first half of the year before it registered a downward trend following improved faster growth in the United States.

Despite a monetary policy characterized by nil nominal interest rates, Japan's economy is still affected by the deflationary spiral and domestic demand continues to be sharply depressed.

The market for government bonds was characterized in the first half of the year by its volatility and the fall in long term interest rates up to record low rates. This trend can be explained mainly by the reduction of short term rates, the slowdown of prices and factors of uncertainty, both geo-political and macro-economic.

Table 4: Development of interest rates in major developed countries (in percentages)

Source: FMI, World Economic Outlook, September 2003

However, it is worth noting that unlike in the United States, Japan and the Euro zone, short term interest rates in the newly industrialized countries of Asia registered a sharp increase of about 3.2% and reached 6.2%, although this situation failed to attract massive capital.

With regard to the development of capital markets, it should be noted that in an environment characterized by better prospects in terms of the recovery of the world economy, stock exchange markets, which had experienced a downward trend early in the year, registered a sharp recovery since March 2003. This development was sustained by improved corporate results as a result of restructuring efforts and continued reduction of the risk-related premiums. In fact, the clearing of uncertainty about the economic consequences of the Iraq conflict following the American - British attacks was directly beneficial to stock exchange markets, leading to the reduction of risk premiums demanded by investors and linked to the potential repercussions of the war. The removal of these risk-related premiums has therefore resulted in the upward movement of the stock exchange markets. Moreover, the improvement of economic indicators in the United States has benefited stock exchange markets. However, the results of stock exchange markets were lower than those of the corporate debentures market.

Chapter II: Development of the National Economy

II.1 Real Sector

II.1.1 Gross Domestic Product

1. Resources

Gross Domestic Product in real terms registered moderate growth of 3.4% in 2003 against 9.4% in 2002. This slowdown of economic growth was due to the moderate performance of the primary sector dominated by agriculture which was hit by climatic vagaries.

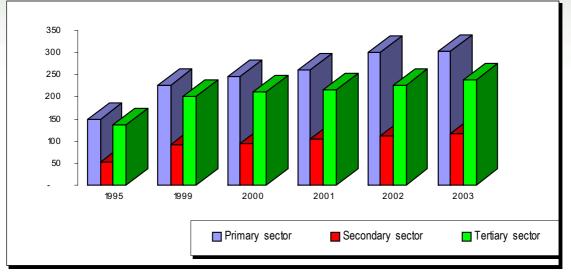

With a population growth almost equal to actual economic growth, real per capita GDP, expressed in US\$, did not change between 2002 and 2003 and remained at 206 US\$. In nominal terms, under the effect of inflation and coupled with the depreciation of the national currency, income per capita did however improve from 97.8 to 112.6 thousand RWF, an increase of 15.2% against 10.75% the previous year.

Source: MINECOFIN, Department of Statistics

During 2003, the structure of the production pattern did not change; in the formation of GDP, the primary sector maintained the first position with a share estimated at 46%, followed by the tertiary sector (36%) and the secondary sector (18%) in that order. However, it should be noted that the value added of the last two sectors registered the highest growth estimated at 6.5% and 5.1% respectively, compared to 0.8% for the primary sector, a record situation since 1995.

A. Primary Sector

Value added for the primary sector, created at 87% by agricultural activities, recorded a slight increase of 0.8% in real terms, representing a sharp slowdown compared to 15% recorded in 2002.

A.1. Agriculture

Value added for the agricultural sector increased in real terms by 0.2% in 2003 compared to 16.9% the previous year. This situation affected the production of the primary sector and, consequently, the entire national production.

a) Food production

Unlike in the previous years, value added for food production expressed at the 1995 prices was almost stagnant with an increase of 1% in 2003 against 17.3% the previous year.

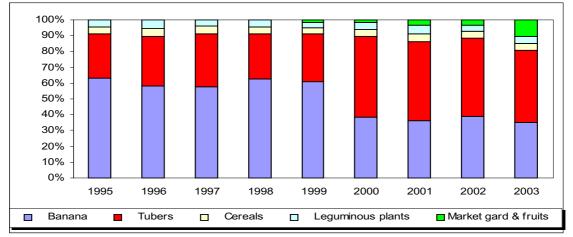

In terms of volume, total food production for 2003 was estimated at 6.82 million tons, a decrease of 4% compared to the level of the previous year. This negative performance was the result of irregular rainfall, where some regions such as Bugesera experienced even serious food shortages due to drought. In other regions, rains started very late and stopped too early, with negative effects on almost all the crops.

Only in the high altitude regions of the North did it rain more or less normally, though sometimes rains were abnormally abundant and caused damage to the crops.

Bananas

After a remarkable performance in 2002 with an annual growth rate of 32.4%, banana production, which represented 35% of total food production, fell again as it had been doing since 1999, due not only to poor rainfall in some regions, but also to bad maintenance of banana plantations in favour of other crops as well as a banana disease (black Sigatoka) which greatly affected the yield of many farms of this crop.

Leguminous plants

For this season, production of leguminous plants rose to 288 thousand tons, representing nearly 4% of total food production. During the year, it maintained its downward trend though at a markedly slow rate. In fact, after it had sharply declined by 12% in 2002, it once again fell by 1% this year.

With regard to beans production, the most important crop of this category, the yield rose to 240 thousand tons, representing 83.3% of total production and 3.5% of total food production. However, for the second consecutive year, beans production registered a drop of about 3% from 15% in 2002.

For other leguminous plants, production was quite sustained for soya beans which increased substantially during the last three years. It increased from 7 thousand tons in 2001 to 17 thousand tons in 2002 and to 20 thousand tons in 2003. This performance was to a great extent a result of the programme of supervision of soya farmers by a local NGO, DYHAMIC ADRI, with the support of districts. Soya farmers under supervision were in fact quite motivated to increase cultivated areas since all their production was bought by this NGO for industrial processing.

Also the farmers themselves were motivated to plant this income-generating crop. In addition, soya was among selected crops in the agricultural policy of MINAGRI for 2003. Garden peas production registered a slight increase of 4% in 2003, while groundnuts production fell by 1%.

Cereals

Sorghum and maize production, which provided 58% and 27% respectively of total cereal production, recorded considerable negative performance, falling by 12% and 8% due to climatic vagaries.

Concerning other cereals, rice production was relatively poor, representing about 10% of total cereal production, but it maintained substantial growth since 2002, with a rate of 24% in 2002 and 28% in 2003, due mainly to the support of the Project for the Recovery of Agricultural Production Emergency Activities of MINAGRI.

Wheat production registered also remarkable performance, increasing to 15 thousand tons in 2003, slightly more than double the production of the previous year. This performance was observed more in the northern regions (Ruhengeri, Gisenyi and Byumba) since they are the greatest producers of wheat, and the fact that this region has wheat flour production plants was an important motivator for the producers.

Tubers

The production of tubers experienced a drop of 11% in 2003. Despite this poor performance, tubers continued to rank first in agricultural food production in 2003, representing 46%. The drop in production to a large extent concerned sweet potatoes and cassava which represented together 60% of total tuber production.

It should be pointed out that these crops had already been greatly affected by poor rainfall in 2002, followed by the dry season which was longer than usual. Consequently, in 2003 crop season, farmers virtually no longer had any cuttings, particularly for sweet potatoes. As for cassava, a drought resistant crop, it was attacked by a disease called 'mosaic', particularly in the provinces of Gitarama, Butare and Cyangugu.

On the other hand, sweet potatoes production improved through considerable increase of cultivated areas and by the fact that the northern regions, which are the most productive regions for this crop, were not much affected by drought. In 2003, production rose by 6.0% against 5.0% the previous year.

Market garden produce and fruit trees

Among its priorities, MINAGRI has undertaken to promote market gardening by providing selected seeds. Production of these crops has registered exceptional results since 2001 by doubling almost every year, such that it represented 10% of total food production in 2003. It should be pointed out on the other hand that poor rainfall has been beneficial to these crops in that the crop period became longer, and the existence of several fruit juice manufacturing plants was an important factor which contributed to increased fruit cropping.

b) Export crops

During 2003, coffee and tea remained the major export crops for the country. Their production however registered poor performance, with a value added at the 1995 constant prices estimated at RWF 6.14 billion against 8.23 in 2002, representing a drop of 25.4%. However, this situation concerned coffee much more than tea.

Production of marketable coffee recorded a drop of 27.03% or 14.17 thousand tons, a fall due mainly to adverse climatic conditions in 2003 and to bad maintenance of coffee trees. It should be pointed out also that coffee trees had reached the phase of poor yields in their production cycle.

It is important to note that the on-going policy of promoting fully washed high quality coffee has started to yield results through the increase of coffee washing stations in the whole country, which already number more than ten. We can estimate that in the near future, the quantity of the fully washed coffee, which in 2003 amounted to about 334 tons, could increase significantly.

As for tea, its production experienced a slight increase of 3.5%, from 14.95 thousand tons in 2002 to 15.48 thousand tons in 2003. This increase, no matter how low, was significant because this crop had recorded a sharp drop of 16.1% in 2002 compared to the previous year.

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003

Table 8: Production of export crops (in tons)

Source: OCIR THE & OCIR CAFÉ, MINAGRI

On the other hand, pyrethrum production recorded a remarkable increase of 92.5%, or 25.41 tons, a performance resulting from the efforts of SOPYRWA which expanded its crop area in order to increase production of this crop.

A.2. Animal production

For some time, the livestock branch has been showing increased value added mainly due to the improvement of cattle keeping through the importation of a better breed of cows. This value added increased by 6.4% in 2003, against 5.3% and 4.2% in 2002 and 2001 respectively.

Table 9: Development of animal production

Source: MINAGRI, Department of Agricultural Statistics

The year 2003 was characterized by increased animal production, driven mainly by the big livestock which experienced a remarkable development, particularly in the provinces of Umutara, Gitarama and Kigali rural. Cattle population increased by 20.2%. There was increased production of meat by 16.8%, amounting to 41.5 thousand tons. Milk production registered also an impressive increase of 72%, or 127.1 million litres, through increased popularity of improved breed milk cows.

Apart from cattle and sheep populations (17.1%) which recorded great change, the other species did not increase much compared to 2002, their growth being around 2%. In general, this low growth of the populations of these other species was mainly due to the gradual modernization of traditional stockbreeding and the reduction of areas reserved for pasture.

Description	1998	1999	2000	2001	2002	2003

Source: MINAGRI, Department of Agricultural Statistics nd: non available data

A.3. Forestry

During 2003, the value added of silvicultural activity registered a low growth of 1.3% against 3.1% in 2002. This situation implied a low level of logging following measures taken recently aimed at environmental protection by restricting logging activities.

A.4. Mining

During the year under consideration, the value added of mining and quarrying observed for some years fell once again (-12.7%) on the whole, despite the high increase registered in the production of tin. This situation was a result of the continuous price drop of major minerals on the international market, and the value added in this field represented only 0.2% of GDP.

In terms of volume, the fall by 32.5% and 63.1% in the production of coltan and wolfram respectively was mitigated by the increase in the production of tin which represented more than 80% of total mineral production in 2003. Mineral production recorded an exceptional growth of 117% compared to 2002. This sharp increase can be explained essentially by the increase of the prices on the international market.

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003
Tin	198	208	155	440	359	365	555	672	1458

B. Secondary sector

In 2003, the value added of the secondary sector at the 1995 constant prices increased from RWF 110.94 billion to RWF 116.29 billion, an increase of 4.8%. This growth was to a great extent attributable to the 'public works and construction' branch, the value added of which increased by 15.0% over the period, while the "manufacturing industry" experienced a decrease of 6.7% due mainly to bad performance of the food processing industry.

Graph 4: Development of the value added of secondary sector branches (at the 1995 constant prices)

Source : MINECOFIN, Department of Statistics

B.1. Manufacturing industry

Under the effects of poor performance of the food processing industry, which was by far the most important component of the manufacturing industry but whose activity had considerably slackened due to the drop in consumption, manufacturing industries on the whole yielded a value added estimated at RWF 48.76 billion in 2003 compared to RWF 52.27 billion in 2002, a fall of 6.7%

Food processing industry, which is largely dominated by the production of alcoholic drinks and lemonades, was affected by the effects of high costs of imported raw materials linked to the depreciation of the Rwandan franc, and to the indirect effects of increased commodity taxes introduced at the beginning of 2003. In the light of the low purchasing power of the population, this situation could not but result in the reduction of consumption and, consequently, also bring down production. Over the period under consideration, the value added of this sub-branch fell by 8.3% to RWF 39.46 billion, while it had significantly increased (+5.5%) the previous year.

Table 12: Development of the value added by type of industry (in millions of RWF, at the 1995 constant prices)

Source : MINECOFIN, Department of Statistics

In terms of the volume of industrial production as shown in Table 13 below, apart from the production of cement which increased by 9.5%, the other major products experienced a significant drop, a situation which concerned particularly tea, coffee, lemonades and modern beer.

Table 13: Development in the production of major industrial products

Source : MINECOFIN (Department of Statistics).

Concerning cement, it is important to point out that as a result of an increasingly high demand at the national level and from regions neighbouring the plant of BUGARAMA, especially Eastern DR Congo, this single factory in the country increased its production significantly in 2003 to 112.2 thousand tons, a substantial increase of 23.0% in one year.

However, it should be noted that the production capacity of this plant, which is gradually regaining its regional market and as Burundi and DR Congo recover peace and stability, is very soon likely to fall short of the high demand of cement linked to the reconstruction and rehabilitation needs of the sub-region.

Some industrial enterprises experienced enormous difficulties and the volume of their production dropped considerably. Such was the case with the coffee processing plants (-29.4%) which were affected by the consequences of the fall in production, and corrugated iron sheets (-30.2%) which registered a sharp drop in terms of orders during the financial year, because local production of this material was subjected to sharp competition by imports.

B.2. Electricity, Gas and Water

For the second consecutive year, national production of electricity and water experienced significant improvement in 2003, with an increased volume of 26.7% and 13.1% respectively. On the other hand, gas production remained very marginal and recorded a sharp drop (-66.7%).

It should be noted that increased quantity of electricity produced in the country was accompanied with the reduction (-11.1%) of imports of this product, a situation which should not however be linked to the big volume of local production, but rather to the limited production capacity of the RUSIZI hydroelectric station, which is the major foreign supplier of electricity to Rwanda. In fact, following the return of peace in Eastern DR Congo which contributed, among others, to the resumption of industrial production activities in the region, the station was faced in the first place with the need to meet local demand before exporting electricity to Rwanda.

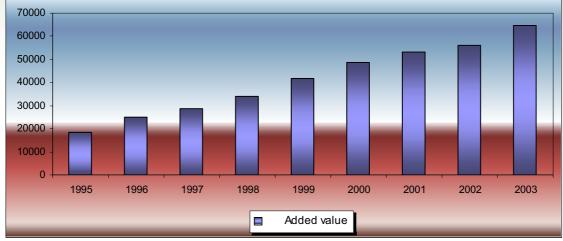

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003
1. Electricity (in million kwh)

B.3. Public works and construction

The buoyancy observed since 1995 in the construction industry and public works continued during 2003. The number and value of constructions and rehabilitation of infrastructure and other public or private buildings registered an increase, and the value added for the branch grew significantly from RWF 56.30 billion to 64.71 billion between 2002 and 2003, representing a rise of 15%.

Apart from the construction of residential houses which continued to grow, 2003 was marked by some important achievements in the framework of the rehabilitation of road and hotel infrastructure, which contributed to the growth of the value added of this field.

Likewise, with the growth of the construction activity, the share of the construction industry and public works continued to increase from one year to the other, and for the year under review, this branch registered 9.8% against 8.8% in 2002.

C. Tertiary sector

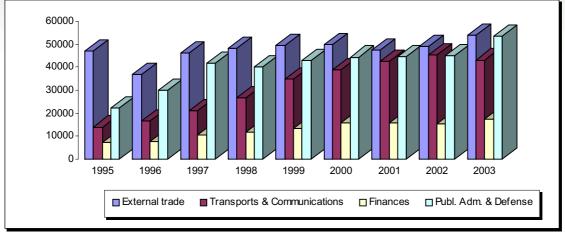

Following the example of previous years, the services sector continued to register remarkable results, and its value added once again increased by 8.3% against 3.4%, reaching RWF 241.7 billion. This performance was to a large extent attributable to non commercial services, largely dominated by public administration whose contribution to the growth of added value for the sector was about 45% against 26% for all commercial services which, nonetheless, continued to be by far the most important in the sector.

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003

C.1. Commercial services

The value added for commercially-traded services, which consist mainly of trade, transport and communications and financial services, amounted to RWF 182.56 billion in 2003 against RWF 177.72 billion in 2002, an increase of 2.7%. These services continued to be the most important branch of the services sector and their share in the total value added was about 75% against 79.6% in 2002.

For general trade, the value added grew from RWF 49.13 billion to 53.80 billion between 2002 and 2003, an increase of 9.5%, a level representing 22.3% of the total value added of the sector and 29.5% of the total value added for commercially-traded services.

Concerning financial services, their performance was considerable on the whole, and even some financial institutions which experienced serious difficulties in the previous years managed to make important progress. For 2003, the value added for financial services increased by 12.4% and stood at RWF 17.49 billion, representing 7.2% of the total value added for the sector, compared to 7% in 2002.

Although it continued to be one of the major components of commercially-traded services, the transport and communications branch was marked by a fall in its value added in 2003, dropping from RWF 45.34 billion to 43.18 billion between 2002 and 2003, a decrease of 4.8%.

C.2. Non commercial services

With regard to the services category, public administration was still the most important and its value added represented 90.5% of commercial services. It increased from RWF 45.17 billion in 2002 to 53.52 billion in 2003, an increase of 18.5%. This increase reflected the significant increase of expenditure for wages and salaries, transfers and purchase of goods and services for final consumption, in relation to intermediary consumption of goods and services by public administration which, in principle, does not produce any gross operating surplus.

The value added for services rendered by non profit making associations and organizations in 2003 also recorded an increase of about 5%, reaching RWF 5.63 billion, a level representing 2.3% of the total value added for the sector, against 2.4% in 2002.

2. Uses

Unlike the previous year which registered a significant growth of 22.8%, the level of final consumption for the year 2003 was slightly lower by 3.9%, its share in real GDP dropping from 105.4% to 97.9%. With a constant share of gross domestic investments and a reduced share of exports in GDP, the fall in final consumption reflected a reduction of external resources which contributed to final consumption in 2003 compared to the previous year. This drop concerned private final consumption which, at the 1995 constant prices, fell from RWF 623.14 billion to 595.15 billion over the period under review, a decrease of 4.5%, compared to final consumption by public entities which remained almost at the same level.

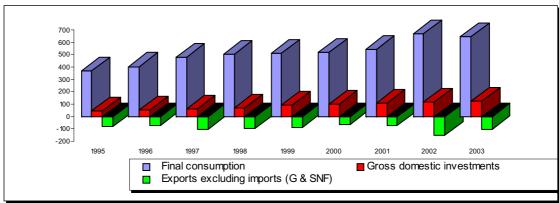

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003
A. Final consumption	109.81	105.18	109.53	105.49	99.98	94.46	93.88	105.36	97.90

GDP	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00

 Table 16: Development of the structure of GDP uses (in percentages)

Source: MINECOFIN, Department of Statistics

At the 1995 constant prices, gross domestic investments registered growth estimated at 3.8% in 2003 against 7.4% in 2002, amounting to about RWF 120.6 billion. Under the impetus of activities in real estate, the formation of fixed capital in the form of construction and other public works increased by 4.4% against 5.9% in 2002.

The level of capital investments did not change significantly and stood at RWF 11.28 billion against 11.50 billion in 2002, representing a slight decrease of 1.9%. Their share in the use of GDP remained also at almost the same level, from 1.81% to 1.72% from one year to the other.

Source : MINECOFIN, Department of Statistics

With regard to resource balance, the chronic deficit was marked by a relative mitigation in 2003, from RWF -150.23 billion to -106.77 billion from one to the other. However, this improvement was far from being qualitative because it was not a result of an increase in exports since these recorded a drop, but rather a result of a more significant fall in the value of imports expressed at the 1995 prices. In terms of current prices, imports showed marked improvement.

II.1.2 Prices

1. Prices of Agricultural Production

Based on the reports of the Ministry of Agriculture and as indicated in Table 17 below, prices of agricultural production increased for most food products whose production had significantly fallen compared to 2002.

Description	1997	1998	1999	2000	2001	2002	2003
Sorghum	80	79	75	79	86	76	72
Maize	32	38	28	30	76	55	93
Wheat	159	157	116	121	47	41	nd
Rice	123	113	97	101	233	229	nd
Beans	89	79	48	51	96	93	93
Groundnuts	270	207	164	172	305	278	376
Soya	128	100	86	90	126	139	nd
Garden peas	152	163	103	108	131	144	170
Irish potatoes	26	39	21	20	42	43	55
Sweet potatoes	19	22	13	14	25	15	42
Cassava	31	36	22	21	68	34	70
Bananas	47	45	41	41	51	34	56
Coffee	384	290	260	260	200	150	320
Теа	27	27	37	37	37	45	45

Table 17 : Development of agricultural production prices (in RWF/kg)

Source : OCIR-CAFE, OCIR-THE, MINECOFIN

Among the highest agricultural production price increases, mention should be made of those for sweet potatoes and cassava which, after falling by 40% and 50% in 2002, recorded a sharp increase of 181% and 108% respectively. Likewise, the price of maize which had fallen by 28% in 2002, increased by 69% in 2003 as a result of poor rainfall, particularly in the provinces of Gitarama, Kibungo and Umutara.

Average producer price of bananas which had dropped by 34% in 2002 due to a bumper crop, increased by 66% the following year mainly due to poor production in most of the regions of the country.

2. Consumer Prices

The almost generalized increase of producer prices had a knock-on effect on consumer prices, such that inflation stood at 7.68% against 6.17% in 2002. The generalized increase of average prices concerned local products, starting with sweet potatoes (+124%), cassava flour (+58%), Irish potatoes (+22%), plantains (+58%) and most of the other staple foodstuffs. Likewise, prices of mixed products, particularly from the food processing industry, showed considerable increase. Such was the case with lemonades and beer the average prices of which increased by 11% and 18% respectively.

In addition to the poor supply of food products on the market following poor agricultural production, the generalized increase of consumer prices in 2003 can be explained by the depreciation of the Rwandan franc against hard currencies which made imported products more costly.

Table 18: Development of prices of major products and local services in 2003 (in RWF per Kg, unless otherwise indicated)

Source : NBR, Research Department

With regard to basic services, it should be pointed out that unlike with goods, charge increase was moderate, and some charges did not even increase during 2003 compared to 2002, such as electricity and water. Consultancy fees in public hospitals fell by 1% only. Only the average price for transport registered high increase at 7% due to increased fuel prices.

During the year, the highest increases of consumer price indexes were recorded for 'Foods' (+15.46%) and 'Beverages and Tobacco' (+30.86%) for imported products; 'Beverages and Tobacco' (+16.59% and 'Other medical services and hygiene' (+7.05%) for mixed products and 'Foods' (+15.55%) for local products.

Source: NBR , Research Department

From their predominant position (44.7%) in the food basket, local products continued to play a determining role in inflation behaviour. During the year, the price level for these products underwent monthly fluctuations, sometimes downward, other times upward, but the general movement for the period was markedly an upward trend as shown in Table 19 below.

Table 19: Development of monthly CPI in Kigali urban in 2003 and by category of products (base 100 for 1982)

The index for the group of imported products had an upward trend, with an average change of 6.27%, driven mainly by drugs and other products from the European countries the currency of which, the Euro, appreciated sharply in 2003, making exports from the Euro zone very expensive.

As for mixed products indexes, they experienced monthly changes, either upward or downward, while in terms of year-over-year, the upward trend was general, though at a different rate from one month to the other.

With regard to staple products, inflation varied upward and downward from one month to another during the year under consideration. There was price increase especially for imported staple products of which the monthly variation of 0.9% in January rose to 3.2% in December. In terms of year-over-year, only prices for local products recorded a drop, from 14.13% in January to 9.52% in December 2003. For imported staple products, inflation was at 14.3% in 2003 against 5.11% recorded in January of the same year; this variation can still be explained by the depreciation of the Rwandan franc against hard currencies.

3. External Trade Indexes

A. Import Indexes

Since 1995, the imports average value index increased, except for the year 2000 when it registered a drop of 7.9%. For 2003, the average value index recorded a sharp increase (+28.6%) as average prices of imports increased much higher than their volume, 42.1% against 0.5% respectively.

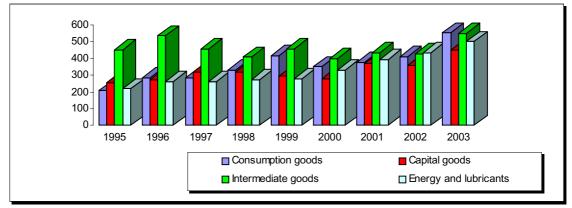

The value index of final consumption goods increased by 63.7% against 0.3% for the volume index, implying that average prices for this category of goods increased at a faster rate than their volume.

With regard to intermediate goods, though their value index increased only by 5.2%, the average value index recorded a sharp increase of 27.6% as a result of a high reduction of imports in terms of volume, the related index having fallen by 17.7%.

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003

Source : NBR, Department of Foreign Exchange Inspection and Balance of Payments

Graph 9: Average value index by categories of imported goods (base 100 in 1990)

Source : NBR, Department of Foreign Exchange Inspection and Balance of Payments

For food products, the volume index increased faster than the value index, resulting in a downward trend of the average value index for this category. Concerning Energy and Lubricants, the value index increased by 30% and the volume index by 12.8%.

B. Export Indexes

The exports average value index which had dropped by 2.4% in 2002, grew by nearly 32.0% the following year due to increased average prices of exports, driven mainly by those of coffee and tin, since the total volume of exports registered a low increase.

		6				1001	1000
Table 23 :	Development	OŤ	export	Indexes	(base	100 in	1990)

Source : NBR, Department of Foreign Exchange Inspection and Balance of Payments

The average value of the country's exports improved markedly as shown in Table 22. For the major export products, the export average value index increased by 66.9% for tin and 56.4% for coffee, two products whose unit price rose sharply.

The average value for wolfram, tea and hides and skins also grew, their value indexes increasing by 33.0%, 18.3% and 16.7% respectively. Only the average value index for pyrethrum registered a fall estimated at 8.9%, a situation resulting however from the fact the average price for this product grew faster than the exported volume.

The exports volume index also increased by 2.4 points, though export volume for coffee and wolfram declined significantly from one year to the other. Total volume was increased by the exports of tin, the volume of which in 2003 more than doubled that of the previous year.

Source: NBR, Department of Foreign Exchange Inspection and Balance of Payments

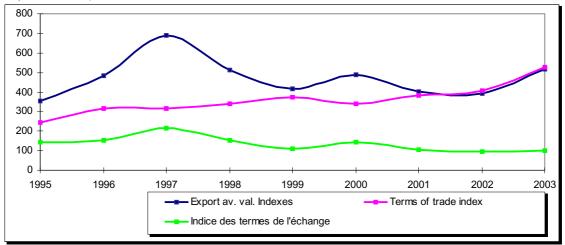

C. Terms of Trade

Despite the significant drop in the value of the country's exports, the terms of trade improved slightly during 2003, and their index increased by 2.6%. This situation was due to the increase of the exports unit value which was greater than that of imports, by 32.0% and 28.6% respectively. The country's capacity to import, illustrated by the total earnings index from trade, improved by 5.1%, marking a turn around of the trend observed since 2001.

II.2.1 Public Finance

1. General Development of the Financial Operations of Government

During 2003 financial year, the Government continued with its efforts to restore financial health by controlling expenditure and increasing tax revenues, particularly through increased recovery capacity and expanding the tax base.

The study of the financial operations of Government for this year reveals a slight increase of fiscal pressure, which however was accompanied with a relatively significant increase of public expenditure, resulting in the deterioration of budget deficit.

The current account budget deficit exceeded the objective of the fiscal Act of 2003 due to the amount of current expenditure in relation to the domestic revenues. These expenses were linked to exceptional social and political programmes, particularly transfers to the support fund for genocide survivors, allowances for demobilized soldiers, Gacaca programme and expenses linked to the end of the transitional period (Parliamentary and Presidential elections and others).

Graph 12: Development of total public revenues and expenditures (as % of GDP)

Public revenue, which represented 12.4% of GDP in 2002, was 13.0% in 2003, an increase resulting from the efforts of Rwanda Revenue Authority in tax recovery. The level of current expenditure however rose to 17.3% of GDP compared to 15.2% in 2002. However, some important expenses such as salaries were relatively controlled and social sectors continued to be given priority (health, education...).

Concerning debt service charges, they continued to affect budget performance in the year under review, even though they were brought down to 4.8% of total expenditure from 6.2% in 2002.

It should also be noted that Government strengthened its domestic credibility by honouring its financial commitments to the private sector despite the reduction of external budgetary grants in absolute terms, but whose relative share increased in 2003, representing 7.8% of GDP against 7.2% the previous year.

2. Domestic Revenue

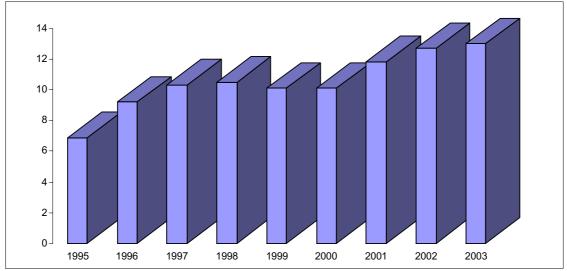

During the financial year under review, Government was able to collect both tax revenues and non-tax revenues amounting to RWF 122.3 billion, compared to 101.2 billion in 2002, representing a significant increase of 20.8%.

A. Tax Revenues

Tax revenues in 2003 improved in all categories of duties and taxes. Import duties and taxes on domestic trade recorded considerable increase of 32.3% and 20.8% respectively. Taxes on income and profits registered also an increase of 16.6% while taxes on property did not change.

A.1. Taxes on goods and services

During 2003 financial year, taxes on goods and services represented an important share in tax revenues, i.e. more than 50%. Compared to 2002, it increased by 20.8% from RWF 47.6 billion to 57.5 billion. This category of taxes was largely dominated by VAT and general turnover taxes which accounted for 66%. Excise duties on beer, fuel, cigarettes, lemonades, soft drinks and mineral water represented a non negligible share (28%).

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003
Taxes on goods and services	9.9	14.4	21.9	28.5	33.6	35.2	41.0	47.6	57.5

Table 28: Development of tax revenues, 1995-2003 (in billions of RWF, unless otherwise indicated)

Source: MINECOFIN, Budget Department

A.2. Taxes on external trade

Taxes on external trade still accounted for an important part of the country's tax revenue, and for 2003 financial year, they accounted for 19.3% of total tax revenue against 17.7% in 2002. These taxes consist for the most part of import duties, of which customs duties, tax on oil and surtax.

Import duties increased by RWF 4.8 billion in 2003 and stood at 18 billion, accounting for an important share of more than 15.7% of total tax revenues, against 13.9% the previous year. However, it should be noted that this increase was not the result of the increased volume of imports, but rather and to a large extent, of the depreciation of the national currency which had a knock-on effect on the value of imports expressed in RWF and, to a lesser degree, of the upward review of tax rates for certain categories of goods.

A.3. Taxes on income and profits

Taxes on income and profits ranked second in total tax revenues, coming after taxes on goods and services. They represented 30% of total tax revenues against 31.2% in 2002. This situation was due to considerable growth of income and profits of personal income tax which increased from RWF 11 billion to 16.5 billion from one year to the other, while for the same period, taxes on profits of private companies fell by 3.2% and stood at RWF 17.9 billion.

A.4. Taxes on property

Tax revenues realized from taxes on property (buildings, vehicles) did not vary between 2002 and 2003. They were estimated at RWF 0.7 billion and their share in total revenues remained negligible at 0.6%.

B. Non-tax revenues

Non-tax revenues, consisting of payments of dividends from public and parastatal companies and administrative fees, recorded considerable growth of about 16.7%, amounting to RWF 7.7 billion, though this was still a low level compared to other sources of domestic revenues. They in fact represented 6.3% only of total revenues against 6.5% in 2002. This situation was due particularly to poor performance of public enterprises which in any case the Government is trying to privatize.

3. Public Expenditure

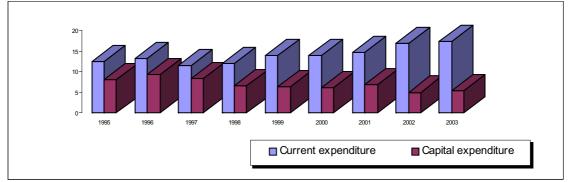

Total public expenditure have been increasing significantly for some years, due mainly to the acquisition of goods and services and the repayment of public debt. On the whole, the state of public expenditure has not improved really. Budget deficit is still at a relatively high level and current expenditure account for a predominant share in this at the expense of capital expenditure which ought to be at a much higher level, given the amount of the country's investment needs.

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003
Current expenditure	42.1	55.9	64.0	75.3	87.1	94.3	107.5	123.7	162.7
as % of total expenditure	60.7	58.7	58.4	64.1	68.3	69.0	68.0	70.3	76.1
as % of GDP	12.5	13.1	11.4	12	13.8	13.8	14.7	15.2	17.3
Capital expenditure	27.3	39.4	46.1	42.3	40.8	42.1	50.0	40.7	51.1
as % of total expenditure	39.3	41.3	42.1	36	32	30.9	31.6	23.1	23.9
as % of GDP	8.1	9.2	8.2	6.7	6.4	6.2	6.8	5.0	5.4
Total expenditure	69.4	95.3	110.1	117.6	127.9	136.4	157.5	175.9	213.8
as % of GDP	20.6	22.3	19.5	18.7	20.2	20.0	21.6	21.6	22.8

 Table 29:
 Development of public expenditures (in billions of RWF, unless otherwise indicated)

Source: MINECOFIN, Budget Department

In relative terms, it should be noted that 2003 was marked by a slight increase of the share of these domestic expenditure in GDP. They increased from 21.6% in 2002 to 22.8%, an increase which cannot however be qualified as qualitative because it is much more associated with the increase of current expenditure than with capital expenditure, which nonetheless stood at 51.1 billion RWF against 40.7 billion RWF in 2002, representing 5.4% and 5.0% respectively of GDP. Over this period, the share of current expenditure in GDP increased noticeably by 2.1 percentage points and stood at 17.3%.

Source : NBR, Research Department

A. Current expenditure

During 2003 financial year, all categories of current expenditure recorded an upward movement compared to the previous year. The most significant increases were recorded at the level of exceptional expenditure (+33.5%), followed by expenses for the acquisition of goods and services (+30.4%).

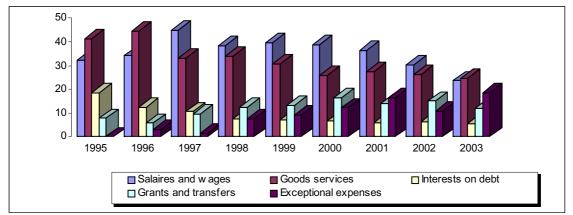

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003
Wages and Salaries	13.6	19.1	28.7	28.9	34.4	36.7	39.0	40.6	44.0
As % of total public expenditure	32.3	34.1	44.9	38.4	39.5	38.9	36.3	30.2	23.6
Goods and services	17.4	25.0	21.2	25.5	26.8	24.4	29.4	35.2	45.9
As % of total public expenditure	41.3	44.6	33.2	33.9	30.8	25.9	27.3	26.1	24.7
Interests on public debt	7.8	6.9	6.8	5.7	6.4	6.1	6.3	8.3	10.2
As % of total public expenditure	18.5	12.3	10.6	7.6	7.3	6.5	5.9	6.2	5.5

As % of total public expenditure	7.8	5.7	9.7	12.4	13.3	16.5	14.0	15.1	12.0
Exceptional expenditure	0.0	1.8	1.0	5.8	7.9	11.5	17.7	19.2	40.2
As % of total public expenditure	0.0	3.2	1.6	7.7	9.1	12.2	16.5	10.9	18.4
Current expenditure	42.1	56	63.9	75.2	87.1	94.3	107.5	123.7	162.7
As % of GDP	12.5	13.1	11.3	12	13.8	13.8	14.7	15.2	17.3

Table 30: Development of current expenditure (in billions of RWF, unless otherwise indicated)

Source: MINECOFIN, Budget Department

With regard to their structure as illustrated in graph 15 below, it is worth noting that, like in the previous years, expenditure for the acquisition of goods and services as well as wages and salaries still occupied an important place in total current expenditure, ahead of those called exceptional expenses which gained in importance during the last three years.

It should be noted that these exceptional expenditure were linked to the Government programme which had to grapple with some urgent but temporary budgetary constraints. In 2003, they covered, among others, Government contribution to the Genocide Survivors Assistance Fund (FARG), GACACA programme, the demobilization of soldiers and their reintegration in ordinary life, purchase of food for prisoners, assistance to orphans and other vulnerable groups, as well as expenses linked to the end of the political transition, as mentioned earlier.

Graph 15: Development of the current expenditure structure (as % of total public expenditure)

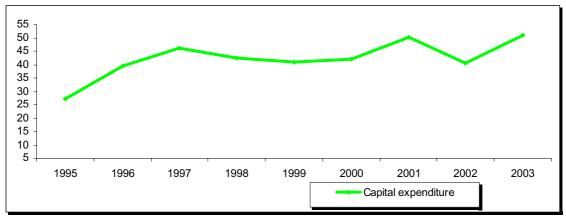

Source: MINECOFIN, Budget Department

Subsidies and transfers accounted also for an important share in public expenditure. Like in the previous financial years, they consisted of expenses incurred by the State in the running of some public institutions, financing the community development fund, assisting districts, towns and some non profit making associations and organizations, paying scholarships and contributions to international organizations and others.

B. Capital expenditure

During 2003 financial year, capital expenditure, funded mainly by donors who finance almost all investment projects, accounted for 31% of budget allocations for the year, a decrease of 2 percentage points compared to their level in 2002.

This situation can be explained not only by the conditionalities which have been more stringent with regard to external disbursements as programmed, but also by delays in the preparation of projects for financing, despite the Government's efforts to strengthen its implementation and monitoring capabilities of public investments.

Graph 16: Development of capital expenditure (in billions of RWF)

4. Budget Deficit and its Financing

A. Budget deficit

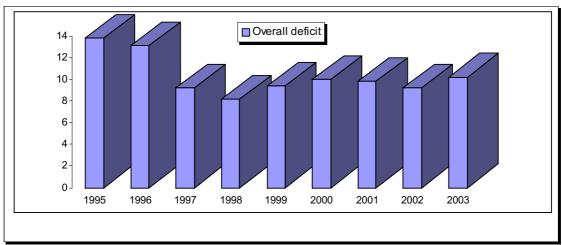

Despite the efforts made to control public finance since 1995, the size of the persistent budget deficit denotes, on one hand, the limited progress made in the recovery of domestic revenues and, on the other, the serious difficulties facing the Government in its efforts to control expenditure. Public expenditure continue to increase faster than revenues which rely on a taxable base which is still limited by the small tax base and the buoyancy of the economic activities of the private sector.

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003
Total revenues	23.1	39.4	58.1	66.0	63.6	68.7	86.2	101.2	122.3
Current expenditure	42.1	55.9	64.0	75.3	87.1	94.3	107.5	123.7	162.7
Current deficit	-19.0	-16.5	-5.9	-9.3	-23.5	-25.6	-21.3	-22.5	-40.4
As % of GDP	-5.6	-3.9	-1.0	-1.5	-3.7	- 3.8	-2.9	-2.9	-4.3
Capital expenditure	27.3	39.4	46.1	42.3	40.8	42.1	50.0	40.7	51.1

Overall deficit	-46.3	-55.9	-52.0	-51.6	-64.3	-67.7	-71.9	-74.8	-95.5
As % of GDP	-13.8	-13.1	-9.2	-8.2	-9.4	-10.0	-9.8	-9.2	-10.2

Table 31: Development of budget deficit (in billions of RWF, unless otherwise indicated)

Source: MINECOFIN, Budget Department

It is worth noting that the level of budget deficit remained quite high during 2003 and that its share in GDP increased from 9.2% to 10.2% between 2002 and 2003.

Graph 17: Budget deficit (as % of GDP)

Source : NBR, Research Department

B. Deficit financing

As in the previous financial years, budget deficit in 2003 was financed mainly from external sources, consisting of drawings on loans and disbursements of external budget support. As indicated earlier, these external resources have been declining sharply, from RWF 30.5 billion to 21.9 billion between 2002 and 2003. Over this period, aid flows not tied to projects fell sharply from RWF 27.7 billion to 5.5 billion and, as a result of this situation, domestic financing increased considerably compared to recent years, increasing to RWF 5.2 billion against 0.7 billion in 2002.

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003
Overall deficit (payment orders excluding grants)	-46.3	-55.9	-52.0	-51.6	-64.3	-67.7	-71.9	-74.8	-95.5
Overall deficit (payment orders including grants)	-7.9	-24.5	-14.2	-18.6	-25.4	-3.6	-9.9	-15.7	- 22.3

II.2.2 Domestic Public Debt

To deal with the problem of both insufficient revenues and the size of the budget deficit, the Government had to resort to loans. Domestically, it borrowed from the Central Bank, deposit banks and from the non banking sector.

Table 33: Development of domestic debt (in billions of RWF)

Source : BNR, Département des Etudes

Domestic public debt currently consists of the consolidated debt, overdrafts granted to Government by the Central Bank, former restructured Development and Treasury bonds, as well as Treasury bills issued on behalf of the Government and to which subscribe commercial banks and other financial and non financial institutions, and individuals though to a very limited extent.

In 2003, domestic public debt decreased by RWF 6.7 billion compared to 2002, a development explained by considerable repayments effected to the commercial banks which had subscribed to Treasury bills. In fact, the public debt stock covered by Treasury bills amounted to RWF 8.6 billion in 2003 against 20.0 billion in 2002.

Source : NBR, Research Department

In terms of outstanding debt, domestic public debt dropped to RWF 70.8 billion in 2003, compared to 75.3 billion in 2002.

Table 34: Development of outstanding domestic public debt (in billions of RWF)

Source : NBR, Research Department

As shown in Table 34 above, despite the repayment of part of the debt owed to National Bank of Rwanda and to commercial banks during 2003 financial year, the level of the domestic debt remained high. Outstanding debt to the banking sector decreased considerably indeed, but debt owed to the non banking sector, which was much higher than that owed to banks, recorded a rise compared to 2002.

With regard to overdrafts from the Central Bank to Government, it is worth noting that the amounts varied depending on the evolution of Government finance. As at 31/12/2003, Government finance stood at RWF 1.5 billion, thanks to a budget support of more than RWF 6.0 billion disbursed during the month of December 2003.

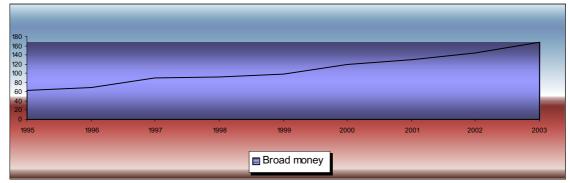

II.3 Monetary and Financial Sector

II.3.1 Money

As in the past, the development of the monetary situation in 2003 was determined by the evolution of the financing needs of the economy in general, and those of the Government in particular. Government needs were particularly felt as a result of the need to finance specific activities in the political field linked to the end of the political transition.

1. Money Supply

In such context, monetary expansion exceeded markedly the level initially anticipated, the financial year under review having been marked by an over expansion of money supply estimated at 16.1% against real GDP growth of 3.4%. Owing to the very high domestic financing of budget deficit, the growth of money supply exceeded the target of 9.2% anticipated in the monetary programme for the year.

During the year, however, money supply recorded a saw tooth development during the first half of the year, and a strong and continuous growth during the second half. By end of May 2003, money supply stood at RWF 150.5 billion, an increase of 4.5% compared to the situation at the end of December 2002. The development observed during the first half of the year was in keeping with the growth of 9.2% targeted for the whole year.

During the second half of the year, however, money supply recorded a fast and sustained evolution. This development was a result mainly of the Government resorting to increased financing by the banking sector due to increased expenditure necessitated by the political timetable and irregular external financing. This led to public deficit (including grants and on the basis of payment order) amounting to RWF 41.5 billion, against 33.4 billion the previous year.

Concerning credit to the economy, its development was largely influenced by loans granted to Hotel Prime Holding.

During the period under review, M1 aggregate registered an increase from 75.4 billion RWF by end December 2002 to RWF 87.2 billion a year later, representing a rise of 15.6%. This improvement was particularly linked to the increase of the currency in circulation from RWF 28.0 billion to 34.1 billion, representing a rise of 21.8% against 12.0% in 2002.

Source : NBR, Research Department

As to quasi-money assets (fixed term deposits and related items and foreign currency deposits), they rose to RWF 80.4 billion against 68.9 billion the previous year, an increase of 16.7%.

II.3.2. Money Supply Counterparts

A. Foreign Assets

By end December of the period under review (2003), the country's foreign assets rose to RWF 104.2 billion against 103.7 billion in December 2002, representing a modest increase of 0.5%. In terms of foreign exchange, however, they recorded a fall of 11.4%, amounting to the equivalent of 179.6 million US\$.

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003
NBR net foreign assets	13.7	18.8	27.7	28.0	27.0	37.4	51.3	72.5	65.5
Assets	29.6	32.4	46.7	54.3	60.9	82.1	97.1	124.7	124.3
Liabilities	15.9	13.6	19	26.3	33.9	44.7	45.8	52.2	58.8
Banks net foreign assets	14.4	18.8	18.5	20.2	17.8	29.5	29.7	31.2	38.7
Assets	15.6	20.2	22.3	24.0	19.7	32.9	34.3	39.1	49.8
Liabilities	1.2	1.4	3.8	3.8	1.9	3.4	4.6	8.0	11.1
Total net foreign assets	28.1	37.6	46.2	48.2	44.8	66.9	81.0	103.7	104.2

Table 36: Development of the country's foreign assets (in billions of RWF, end of period)

Source : NBR, Research Department

Compared to end December 2002, net foreign assets of National Bank of Rwanda showed a downward trend of 9.7%, from RWF 72.5 billion to 65.5 billion by end December 2003. When expressed in US\$, this decrease was higher since these foreign assets fell sharply from RWF 141.6 million to 112.9 million, representing a fall of 20.3%. It should be noted that with the liberalization of foreign exchange, from the resources point of view, the trend of net foreign assets of NBR is mainly linked to the rate of external disbursements. From the use point of view, this trend is linked to the rate of foreign currency

expenditure to meet Government's external commitments and requirements of the partners of National Bank of Rwanda, particularly local commercial banks.

Net foreign assets of commercial banks increased from RWF 31.2 billion by end December 2002 to 38.7 billion by end December 2003, representing a rise of 24.0%. In US\$ terms, these assets recorded an increase of 9.5% only, from 60.9 to 66.7 million US\$.

B. Domestic Credit

After a contraction of 6.0% in 2002, domestic credit increased considerably by 33.3% during the period under review, an increase which concerned simultaneously its two components, namely net credit to Government and credit to the economy.

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003
Net credit to Government	22.5	22.4	23.0	19.4	26.2	24.3	18.7	1.2	17.0
Claims	49.3	52.3	49.7	51.4	58.5	50.8	50.8	57.8	59.0
Dépôsits	26.8	29.9	26.7	32.0	32.3	26.4	32.1	56.6	42.0
Credit to the economy	29.8	29.9	46.0	56.1	61.7	70.2	76.2	88.1	102.0

Autonomous agencies	-	-	-	-	-	-1.1	-1.3	-0.9	-0.6
Total	52.3	52.3	69.0	75.5	87.9	94.5	94.9	89.3	119.0

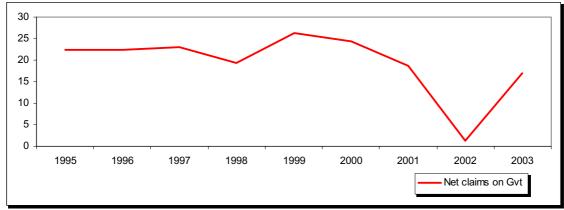

Table 37: Development of domestic credit (in billions of RWF)

Source : NBR, Research Department

B.1. Net credit to Government

During the period under review, the growth of the net credit to Government was fast due to a considerable volume of expenditure not covered by foreign budgetary resources which had become very irregular. Thus, the level of the net credit to Government rose from RWF 1.2 billion to 17 billion between December 2002 and December 2003.

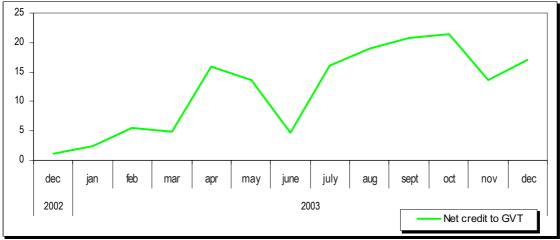

In fact, the year 2003 was marked by a significant slowdown of external disbursements compared to previous years. As a result, Government made an intensive use of resources from the banking sector to meet its expenditure which rose particularly starting from July, with a sharp expansion in October 2003.

Graph 20: Development of net credit to Government (in billions of RWF)

Source : NBR, Research Department

During the year under consideration as illustrated by graph 21 below, net credit to Government showed erratic trends with a very sharp fall in June and a strong increase in October 2003. The fall in June was due to Government's considerable cash in hand consisting of budget support of RWF 1.8 billion received from Great Britain, inflows of tax revenues amounting to RWF 12.8 billion and the issue of Treasury bills to the tune of RWF 7.3 billion.

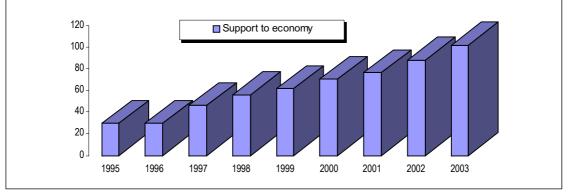

As pointed out earlier, the expansion of net credit to Government observed between June and October was a result of Domestic expenditure which were particularly high during this period, when expected budget support for the period took time to come.

B.2. Credit to the economy

During the period under review, total credit to the economy from the banking system rose from RWF 88.1 billion in 2002 to 102.0 billion, an increase of 15.8% against 15.6% the previous year. With 95.8% of total credit to the economy, the private sector maintained its predominant place.

Source: NBR, Research Department

Source : NBR, Research Department

It is worth noting that for the second year running, public companies received increasing attention from the banking system. They were financed to the tune of RWF 4.9 billion against 3.5 billion in 2002.

New credits granted during 2003 increased by 22.3%, amounting to RWF 58.23 billion. The sector 'Trade, Restaurants and Hotels' was leading among the beneficiaries of this financing, having received new credits to the tune of RWF 28.22 billion, compared to 17 billion the previous year, representing an increase of 66%. This increase was due to the amount of financing granted to two big projects concerning hotel construction and rehabilitation.

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003

TOTAL	13.56	22.50	23.48	47.44	51.39	47.80	40.30	47.60	58.23

Table 38: Distribution of new credits by sector of activity (*) (in billions of RWF)

Source : NBR, Department of Monetary and Financial Markets

The public works and construction sector ranked second, recording a significant increase of 13.2% of financing by the banks. New credits for other sectors were insignificant, with the 'manufacturing industry' sector receiving even less new credits than the previous year.

Agriculture indeed received more new bank credits during 2003, but the level remained insignificant compared to the importance of this sector in the economy and the financial needs required for modernizing production in this sector.

II.3.3. Interest rates

Description		2002				2003		
	March	June	Sept.	Dec.	March	June	Sept.	Dec.
Deposit rates	10,15	10,05	8,96	9,02	8,88	9,19	9,30	9,43
Lending rates	16,75	16,67	17,25	16,37	14,87	16,85	16,35	16,45
NBR money market rate								
- mopping up	8,44	7,51	9,82	10,5	10,24	9,29	11,01	11,63
- injection of funds	-	-	-	-	-	-	-	-

Weighted average on treasury bills rate	8,50	8,35	9,84	10,49	10,52	10,69	11,50	12,68

Table 39 : Trend of interest rates (in percentages)

Source : NBR, Research Department

A. NBR money market rate

The money market rate concerned here is the rate applied for cash mopping up since there were no cash injections during 2003. This rate increased by 1 percentage point to 11.63% from one year to the other. This trend was a result of the situation of overliquidity which persisted in the banking system, pushing the Central Bank to increase its mopping up intervention in order to regulate banks' liquidity as per NBR objective.

B. Deposit and lending rates

Since June 2003, average deposit rate showed a stable trend revolving around 9%. In December 2002, it rose to 9.02%. The average lending rate was also more or less stable, ranging between 16% and 17%.

C. Discount rate

In accordance with Article 1 of Directive No. 02/2002 of 14th June 2002 fixing the discount rate, the latter is indexed to the monthly interbank money market average rate, based on the operations registered on the interbank money market for the previous month, to which is added a number of percentage points determined by the Central Bank, which can increase or decrease depending on the profile which the Central Bank wishes to give to the use by the banks of the pension window and, thereby, discourage or encourage credit expansion indirectly.

Thus, faced with the sharp increase of credit observed since June 2003, NBR decided in August 2003 to fix this rate at 14.5% up from 13.5% which was in force up to the month of July of the same year.

D. Interbank money market rate

On the interbank money market, rates are freely negotiated between the lending and the borrowing parties. They slightly varied during the last two years, increasing from 9.91% in December 2002 to 10.38% in December 2003.

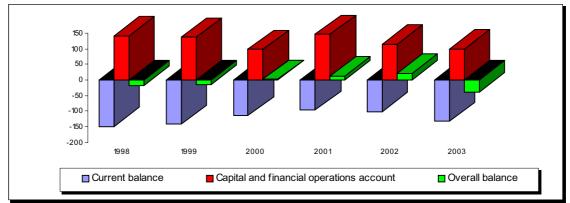

II.4 External Sector

II.4.1 Balance of Payments

1. General situation

In 2003, the overall balance of payments deteriorated significantly and stood at -36.7 million US\$ against a positive balance of 18.1 million the previous year. This deterioration was observed both at the level of the balance of trade and balance of services, worsening further the current deficit, despite an increase of net current transfers by 3.9%.

The capital and financial operations account stood at 99.7 million US\$ only, against 115.7 million the previous year, representing a decrease of 13.8%, which contributed largely to the worsening of the overall deficit in 2003.

Graph 22: Development of major balances of the balance of payments (in millions US\$)

Source : NBR, Foreign Exchange Inspection and Balance of Payments Department

It was possible to finance the overall deficit largely through the reduction of the level of the Bank's official reserves which came down to the equivalent of 5.6 months of imports when in 2002, this level represented 7 months of imports of goods and services, and through exceptional financing consisting of Kuwait Fund debt rescheduling and writing-off of debt service arrears with some bilateral donors.

Description	1998	1999	2000	2001	2002	2003
Trade balance	-169.4	-187.9	-157.8	-131.5	-136.8	-154.7

Table 41: Development of current transactions (in millions US\$)

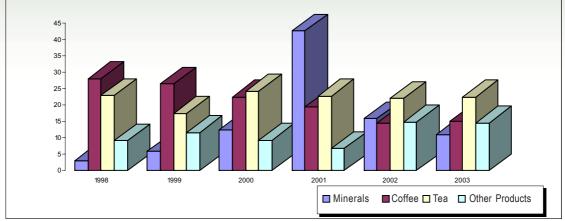

Source: NBR, Foreign Exchange Inspection and Balance of Payments Department

A. Trade balance

Once again, the year 2003 was characterized by a deficit trade balance standing at -154.7 million US\$ against -136.8 in 2002, representing a fall of 13.1%. The major reason for this situation was the drop in exports and increased imports necessary to meet the needs of the country for various economic activities.

A.1. Exports

Since the continuous fall in coffee prices in 1989 followed by that of coltan prices in 2002, the export sector became sluggish and was marked by a continuous decrease of revenues which fell to 63.1 million US\$ from 67.4 million US\$ in 2002, a drop of 15.3%.

Graph 23: Development of major exports (in millions US\$)

Source : NBR, Foreign Exchange Inspection and Balance of Payments Department

The expected revitalization of non traditional exports was mitigated as a result of transport problems with transport costs discouraging economic operators, causing a slowdown of the volume of exports, particularly fruits, vegetables and flowers.

On the other hand, exports of hides and skins, tin and pyrethrum registered a relative boom in 2003, offsetting slightly the loss of income incurred on coltan and coffee.

Table 42: Development of the value and volume of major exports (value in millions US\$; volume in tons)

* For pyrethrum only

Source: NBR, Foreign Exchange Inspection and Balance of Payments Department.

Coffee

Though there was a marked improvement compared to 2002, the value of coffee exports by the end of 2003 amounting to 15.01 million US\$, or an increase of 2.5%, was still low compared to 2001 and previous years.

Despite a sharp drop in the volume of coffee exports (-25.75%), the observed rise in the value of exports was mainly linked to the good prices offered for "fully washed" quality coffee (2.45 US\$/Kg), which raised the average price to 1.01 US\$/Kg in 2003 against 0.74 US\$/Kg in 2002.

However, the volume of production of the fully washed good quality coffee is still too low due to the fact that there are still no sufficient modern washing stations. The objective of the Government in the years to come is to inject sufficient financial resources in this sector with a view to significantly increasing production.

Теа

Compared to the previous year, the volume of tea exports in 2003 recorded a slight drop of 1.7% from 14,574 to 14,331 tons. As for the average price, there were some improvements from 1.51 US\$/Kg to

1.57 US\$/Kg in 2003, representing an increase of 3.9%. This price improvement contributed to offsetting the effect of low volumes on sales value which increased by 2.3%, from 22.02 million US\$ in 2002 to 22.52 million US\$ in 2003.

Minerals

Since the fall of the coltan fever in 2001, the mining sector recorded a sharp slowdown of its exports in 2002 and 2003. Apart from tin the demand of which allegedly revitalized the market, exports of the other major mineral, the coltan, continued to fall both in terms of volume and price. This had a negative impact on the value of mineral products exports which fell to 11.09 million US\$ compared to 15.87 in 2002, representing a drop of 17.59%. Exports of coltan earned 13.95 million US\$ in 2002 compared to 6.37 million in 2003, representing a fall of 54.3%, a result of the fall in volume by 32.6% and in price by 32.2%.

The performance recorded in terms of the value of tin exports (more than double in 2003 compared to 2002) could not offset the losses recorded with coltan due to the fact that the volume of tin exports in mining products is still very low.

Hides and skins

Since 2002, the value of hides and skins exports started to gain more importance in the structure of exports, their share amounting to 0.8% in 2001, 3.9% in 2002 and 6.0% in 2003. This trend denotes a more active intensity of the market and an increasingly important demand on the international market as reflected by the evolution of price and volume which stood at 1.39 US\$/Kg and 2,728 tons in 2003 against 1.33 US\$/Kg and 1,984 tons in 2002 respectively, representing an increase of 4.5% and 37.5% from one year to the other.

Pyrethrum

Despite a fall of 20.23% in the average price for 2003, the pyrethrum sector performed well as a result of the big volume of exports which increased from 13.1 tons in 2002 to 20.0 tons in 2003. The value of exports of pyrethrum extracts rose to 1.28 million US\$ in 2003 against 1.05 million in 2002, a rise of 40.2%.

Other exports

The value of other exports, which consist mainly of re-exports to the tune of about 75%, amounted to 9.37 million US\$ in 2003 against 11.14 million in 2002, a fall of 15.9% attributable to the fall in the value of non traditional exports (-13.5%) and electricity (-90.0%), while the value of re-exports registered an increase of 16.8%, from 5.79 million US\$ in 2002 to 6.75 million in 2003. These re-exports consisted mainly of fuel, secondhand clothes and vehicles.

A.2. Importations

Given the considerable needs in capital and intermediate goods as well as in foodstuffs, the CIF value of imports recorded at the two major entry points, namely Kanombe International Airport and Magasins Généraux du Rwanda (MAGERWA) where pass goods entering by land, registered an increase of 4.5% in 2003 and stood at 259.27 million US\$ against 248.03 million in 2002¹.

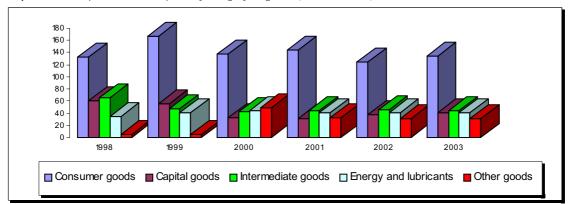

When account is taken of imports passing through secondary entry points and imports of electricity, total CIF value of imports was estimated at 290.25 million US\$ in 2003 against 278.51 million in 2002, representing an increase of 4.2%.

 $[\]frac{1}{1}$ In order to take into consideration imports entering through other border posts, Customs started, by early 2003, to systematically capture customs declarations for 2002 and 2003. However, the exercise is not yet over. For 2001, these data were estimated on the basis of analysis of these declarations. The CIF value of these imports is estimated to represent 8% of imports registered at Kanombe and MAGERWA.

B. Balance of services

With regard to non factor services, the services balance deficit is chronic just as is the trade balance, due to the persistent imbalance between the charges paid to residents for imports and exports related services, but also to the fact that technical assistance services provided by non residents are still significant.

Receipts related to factor services are realized mainly from interests charged by the banking system on their foreign investments. This source of foreign exchange has a tendency of drying up as a result of the significant fall in interest rates on most capital markets, particularly in Europe and United States, while revenue on services payable on public foreign debt and labour incomes collected by non residents remain significant. The value on net imports of services amounted to 170.10 million US\$ in 2003 against 159.7 million in 2002, representing a deterioration of the balance of services deficit of 6.5%.

The balance of non factor services, which is structurally predominant in overall services (+85.2% of the balance of net services), stood at -145.0 million US\$ in 2003 against -140.6 million in 2002, representing a deterioration of 3.1%. This is attributable to increased expenditure in all categories of non factor services, of which charges related to importation of goods, technical assistance and operating expenses of our diplomatic and consular representations abroad constitute the great share (+87.0% of non factor services expenditure).

Table	44:	Development	of	trade	in	services	(in	millions	US\$)
							· · · ·		

Source: NBR, Foreign Exchange and Balance of Payments Department

The balance of factor services deficit rose to 25.1 million US\$ in 2003, representing a deterioration of 3.1% compared to the previous year and contributing to the worsening of the overall balance of services deficit.

C. Unrequited transfers

Compared to 2002, current transfers registered in 2003 were relatively high, rising to 203.5 million US\$ from 195.3 million US\$, representing an increase of 4.2%.

Net official transfers, which consist mainly of current budgetary support and humanitarian aid, recorded a slight increase of 1.6% attributable to the 13.6% increase of budgetary support in the form of grants which increased from 57.9 million US\$ in 2002 to 65.7 million US\$ in 2003. This support came mainly from United Kingdom, the European Union and Sweden. Though it was of less significance in 2003 than in 2002 (-7.5%), debt service reduction under HIPC Initiative of about 23.6 million US\$ contributed to the increase by 1.9% of net current official transfers between 2002 and 2003.

Description	1998	1999	2000	2001	2002	2003
Private transfers	19.35	18.15	11.03	21.74	24.52	29.37
Credit	34.56	29.70	27.32	38.14	43.55	47.36
Debit	15.21	11.55	16.29	16.40	19.03	17.99
Current official transfers (net)	148.71	180.55	206.71	170.86	170.80	174.09
Credit	150.11	181.80	207.60	172.20	172.71	175.97
1. Current budgetary support	11.11	44.70	102.60	78.20	83.41	89.36
2. Humanitarian assistance	139.00	137.10	105.00	94.00	89.30	86.61
Technical assistance	50.00	50.00	45.00	40.00	38.00	39.00

Debit						
Contribution to international organisations	1.40	1.25	0.89	1.34	1.91	1.88
Current transfers (net)	168.06	198.70	217.74	192.60	195.32	203.46

Table 45: Development of unrequited transfers (in millions US\$)

Source : NBR, Foreign Exchange and Balance of Payments Department

Net private transfers increased by 19.8%, from 24.5 million US\$ in 2002 to 29.4 million US\$ in 2003. This increase was due to grants and other subsidies, which were relatively more substantial in 2003 than in 2002, granted by non residents to Non Governmental Organizations and religious missions established in Rwanda.

As a result of the reduction of humanitarian interventions by one of the major Non Governmental Organizations operating in Rwanda, humanitarian aid support fell by 3.0%, from 89.30 million US\$ in 2002 to 86.61 million US\$ in 2003.

3. Capital and Financial Operations Account

Compared to the two previous years, 2003 was characterized by a reduction of the balance of the capital and financial operations account which amounted to 99.74 million US\$, compared to 115.66 and 146.72 million US\$ in 2002 and 2001 respectively.

This reduction occurred at the level of the financial operations account, particularly transactions by the Government in relation to budget support in the form of loans, of which the actual drawings in 2003 amounted to 10.5 million only granted by the World Bank (IDA) and OPEC, against 50.73 million US\$ in 2002 granted by the World Bank as budget support and support to the demobilization exercise.

The increase of 6.7% compared to 2002 of foreign support for development projects, or 35.4 million US\$ against 33.17 million in 2002, did not offset the reduction registered at the level of balances of long term capital transactions (-63.2%) on one hand, and short term transactions (-9.7%) on the other. The balance of financial transactions amounted to 34.43 million US\$ against 73.96 million US\$ in 2002, representing a drop of 53.4%.

Description	1998	1999	2000	2001	2002	2003
Capital account	67.29	70.70	62.67	68.70	41.70	65.31

Capital and financial operations account	141.03	137.32	98.58	146.72	115.66	99.74

Table 46: Development of capital and financial operations account (in millions USD)

Source: NBR, Foreign Exchange and Balance of Payments Department

It should be pointed out that debt service for the principal due in 2003 amounted to 27.1 million US\$, representing an increase of 4.2% compared to the service owed the year before, the most important part of which is for multilateral donors (82.0%), particularly the World Bank (IDA), the African Development Bank (AfDB) and BADEA. Debt service owed to bilateral donors (28.0%) concerns mainly the French Development Agency, Japan and China.

4. Overall Balance Deficit Financing

Unlike in the two previous years, the overall external situation worsened significantly in 2003, the overall balance of payments recording -36.7% million US\$ against positive balances of 18.1 and 13.2 million US\$ in 2002 and 2001 respectively, as a result of the deterioration of the current balance and the reduction of the general level of foreign aid.

Description	1998	1999	2000	2001	2002	2003

Table 47: Financing the balance of payments deficit (in millions US\$)

Source : BNR, Département de l'Inspection du Change et de la Balance des Paiements

It was possible to finance the known deficit to a large extent by a big withdrawal from the net official reserves of 28.2 million US\$ and an exceptional financing of about 24.7 million US\$ mainly by the Kuwait Fund (20.0 million US\$) and other bilateral donors.

II.4.2 External Debt

Composed mainly of public loans, the country's foreign debt consisted of external loans contracted by the private sector, with or without Government's security, besides IFM debts managed by National Bank of Rwanda. Although it is still moderate and not monitored exhaustively, the debt of the private sector might gain in importance in a quite near future.

1. Foreign Public Debt

For some years, the foreign public debt has been restrictive since it has become a heavy burden compared to the country's economic capacity. The inadequate level of domestic savings, combined with the need to finance development programmes, has brought foreign public debt to levels which are currently unbearable. Moreover, the unfavourable international trade on the markets of major export products and the low levels of domestic resources limited the country's capacity to repay.

The international community's assistance through the Multilateral Debt Fund following the visit to the Paris Club in 1998, and the interim debt relief's obtained since 2001 following the country's eligibility to the decision point of HIPC Initiative enabled it to enjoy greater flexibility in terms of the budget. However, external payments for public debt service continue to cripple the Treasury, denying it of considerable amounts of resources which it needs to finance its poverty reduction programme.

In this context, the postponement to a later date of the completion point of HIPC Initiative earlier planned for end 2003 contributed to the worsening of the already precarious financial situation. Even if it could not resolve directly the problem of foreign debt repayment, the country's eligibility at this stage would certainly have had an important positive impact in terms of liquidity.

A. Foreign Public Debt Characteristics

In general, Rwanda's foreign debt has enjoyed highly concessional terms. Its cost as expressed by the average interest rate weighted by contracted debt is 1.27%, while the average maturity period is 26 years. More than half the debts contracted are charged an interest rate of less than 1% and enjoy a maturity period of more than 40 years, and only 16 loans have an interest rate of more than 5%.

		Weighted average interest rate	Average maturity	Source of fina	ncing (in %)
Interest bracket	Number of loans	(in %)	(in years)	Multilateral	Bilateral
[0-1]	126	0,71	41,84	93,0	7,0
[1-3]	43	1,62	27,88	48,8	51,2
[3-5]	19	3,29	19,68	63,2	36,8
[5-9,5]	16	6,01	16,13	12,5	87,5
Total/Average	204	1,27	26,38	74,5	25,5

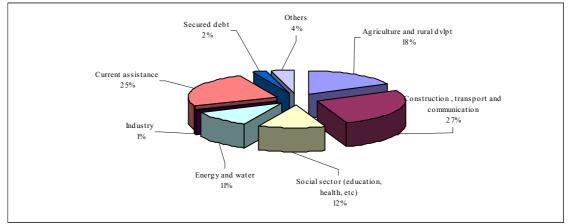

Table 48: Interest rates and average maturity period of foreign debt

Source: NBR, Foreign Exchange and Balance of Payments Department

The public loans portfolio consists to a large extent of multilateral loans, the number of which represents about 75% against 25% for bilateral loans.

With regard to financed sectors, it should be pointed out that a considerable share of public debt has been directed to consumption. This sector alone has taken 25% of public foreign loans. This situation took on a large scale especially after the war and can be explained by the need to revitalize the economy which had been ruined by the sad events of 1994.

Nonetheless, in spite of this situation, the infrastructure sector, namely construction, transport and communications, ranked first with 27% of total financing, while agriculture and rural development came third with 18%.

Graph 25 : Foreign financing by sector of activity

Source : NBR, Foreign Exchange Inspection and Balance of Payments Department

Despite the importance of the social sector in the development of the country, it appears that in the case of Rwanda, this sector, which consists mainly of education and health, did receive only a relatively low share of financing, amounting to 12% only of foreign public loans.

B. Debt Stock and Debt Outstanding

B.1. Debt stock

The stock of foreign public debt amounted to 1430.2 million US\$ at the end of 2003 against 1307.0 million at the end of 2002, representing an increase of 9.4%. This was the second year when foreign debt registered an increase. Debt stock owed to multilateral and bilateral creditors amounted to 1259.0 and 171.8 million US\$ respectively, representing 88% and 12% of total public debt.

Multilateral debts increased by 8.6% to 1259.0 million US\$ at the end of 2003, while bilateral debts grew by 7.6% in the same period.

The increase of multilateral debt is attributable both to new disbursements made by some multilateral creditors and the depreciation of the US dollar against other debt currencies for Rwanda, mainly the SDR and the Euro, while that of bilateral debt was the result of the depreciation of the dollar against some lending currencies, particularly the Euro and the Yen. There were no new disbursements by bilateral creditors in 2003.

Table 49: Development of foreign public debt stock (in millions US\$)

Source : NBR, Foreign Exchange Inspection and Balance of Payments Department

The structure of the public debt in relation to loan currencies reveals great exposure to exchange risk associated mainly with the SDR. In fact, this currency dominates the public debt portfolio up to 77%. This predominance can be explained by the reduced margin available to Government to contract new loans since it can resort only to a smaller number of creditors, mainly IDA and AfDB whose currencies are the SDR and the Unit of Account respectively, the latter being equivalent to the former. Thus the weight of the SDR continues to increase while the value of other foreign currencies reduces gradually because of repayments and the absence of new loans.

B. 2. Debt Outstanding

Debt outstanding differs from debt stock by the amount of interest arrears. These arrears continued to increase with the restructuring of Rwanda's foreign debt carried out successively in the past. They stood at a low level of about 2.7 million US\$ at the end of 2003 and, as a result, the debt outstanding presented the same characteristics as the debt stock, both at the structure level and in its development.

It is however worth pointing out that foreign public debt continues to be a burden on the national economy and constitutes an obstacle to the development of the country. The country's debt-to-GDP ratio and debt-to-exports ratio highlight the problems of solvency of Rwanda's economy. In fact, in 2003, public debt accounted for about 82% of GDP, a ratio largely exceeding the critical threshold fixed at 50%. The debt-to-exports ratio for goods and services was 1140% against 1161% the previous year. This is by far higher than the acceptable level of 250%, and it virtually did not improve despite the relief obtained under the HIPC Initiative during these last years.

The eligibility of the country to the completion point of the HIPC Initiative which would have brought some relief following the cancellation of the debt owed to some bilateral donors was postponed as a result of the temporary suspension of our programme with IMF.

C. Drawings on Loans

Disbursements on loans recorded in 2003 decreased compared to 2002, from 89.3 million US\$ at the end of 2002 to 40.4 million US\$, corresponding to a drop of 55%. Total loans came from multilateral creditors, where IDA provided more than half amounting to 26.4 million US\$. The rest came from AfDB, IFAD and OPEC.

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003
Multilateral donors	47	54.9	64.8	85.1	81.5	47.1	71.8	87.9	40.4
- of which : IDA	24.5	41.9	53.0	68.0	69.5	37.8	53.5	73.3	26.4

Total	47	56.1	64.8	85.4	81.6	47.3	72.9	89.3	40.4

Table 51: Development of drawings on foreign loans (in millions US\$)

Source: NBR, Foreign Exchange Inspection and Balance of Payments Department

The decrease of disbursements was primarily at the level of budgetary support the disbursement of which fell from 50.3 to 11.4 million dollars from one year to the other. Disbursements for project financing recorded the same rhythm and amounted to 28.2 million dollars only in 2003 against 40.8 million the previous year.

Apart from some conditionalities which were not complied with, the fall in external disbursements reflected the slowdown of implementation of the projects financed from external funds due, among others, to the cumbersome bureaucracy and long and complicated procedures used by some creditors, the poor competence of project managers, etc.

Table 52: Development of outstanding public debt service (in millions US\$)

Source : NBR, Foreign Exchange Inspection and Balance of Payments Department

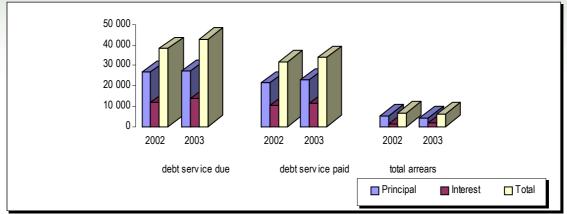

D. Public Debt Service

In 2003, external public debt service amounted to 40.8 million US dollars, 27.1 million dollars of which represented the principal and 13.7 million dollars the interest. Compared to 2002, this represented an increase of 10% since the debt service amounted to 37.1 million dollars, but this increase concerned mainly the debt service owed to IDA.

Debt service owed to multilateral donors increased by 25% compared to the previous year, from 26.4 to 33 million dollars. In the absence of new disbursements and as a result of the restructuring of the debt under the HIPC Initiative, the debt service owed to bilateral donors decreased compared to the previous year. It fell slightly from 7.7 to 7.1 million US dollars, representing a decrease of 7.8% compared to the previous year.

External public debt services paid at the end of 2003 amounted to 34.8 million US\$. The comparison with outstanding debt service for that year shows that the country has accumulated payment arrears of 6.0 million US\$ in 2003, representing a slight improvement compared to 2002 where they amounted to 6.6 million dollars.

Payment of the public debt service in 2003 was done through the assistance of HIPC debt relief up to 23.6 million US\$ and Treasury by 13.1 million US\$, representing 64% and 36% respectively of total debt service paid, and 58% and 32% of outstanding debt service.

Graph 26 : External public debt service due and paid (in thousands US\$)

Like in the previous two years, the assistance received from the HIPC Initiative in 2003 represented a capital contribution for the country which enabled it to honour its public debt commitments and offered some flexibility to Treasury, which otherwise would have faced a serious problem of liquidity due to the high level of the debt service.

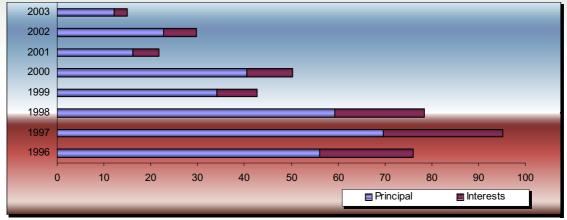

In fact, public debt service represented 19% of budgetary revenues and 32.6% of export earnings from goods and services in 2003. These percentages exceed largely the levels considered viable which must be lower than the thresholds of 12% for domestic revenues and 15% to 20% for exports.

E. Stock of Arrears

In 2003, the arrears on external public debt continued their downward trend started since 1998, following the restructuring of the debt which was reflected by debt rescheduling or cancellation of accumulated arrears.

At the end of 2003, the stock of arrears owed to external creditors reduced by half and stood at 14.8 million US\$, compared to 29.7 million in 2002. This decrease is attributable primarily to the rescheduling of about 20 million US\$ of arrears owed to Kuwait Fund and, to a lesser extent, to the discharge of arrears previously owed to Austria, Holland, United States of America and Canada, following the signing of bilateral agreements for the adjustment of the debt owed to these countries.

The situation of arrears could have improved further were it not for the delay in concluding similar agreements with France and Japan, the only countries of the Paris Club yet to sign the agreement with Rwanda. Among the countries non members of the Paris Club, Abu Dhabi is the only country in respect of which arrears continue to accumulate for the same reason of not concluding an agreement for debt restructuring.

Graph 27 : Development of the stock of arrears on external debt (in millions US\$)

Source : NBR, Foreign Exchange Inspection and Balance of Payments Department

F. Debt Relief

Like in the previous years, the country received debt relief provided for under the interim period of the HIPC Initiative in the form of flows or stock processing. These debt reliefs, which were granted through cancellations or rescheduling, doubled compared to 2002 and amounted to 54.2 million US\$. This increase was the result of the restructuring of the Kuwait debts and debts of some of the already mentioned members of the Paris Club.

The rescheduling carried amounted to 28.8 million US\$, of which 20.2 million for arrears, 2.3 million for debt service and 6.3 million for the not yet due debt. Debt relief amounted to 25.4 million US\$ and concerned mainly current debt service owed to some multilateral creditors.

With cancellations of part of the debt service owed to them, these multilateral creditors contributed 22.9 million US\$, IDA being in the lead with 15.0 million, followed by the AfDB Group with 6.2 million and the European Union with 1.7 million. These grants could have been more significant but for the temporary suspension of the economic programme agreed with the Bretton Woods Institutions, a situation which constituted a cost to the economy estimated at 3 million US\$ due to outstanding debt reliefs.

Description	2001	2002	2003							
IDA	12.14	14.00	15.03							
IMF	8.59	4.22	0.00							
AfDB Group	3.17	6.12	6.20							
European Union	-	1.23	1.70							
Total	23.90	25.57	22.93							

Table 53 : HIPC debt relief granted by multilateral creditors (in millions US\$)

Source: NBR, Foreign Exchange Inspection and Balance of Payments Department

With regard to bilateral creditors, the most significant grants came from Kuwait Fund which offered a debt rescheduling of 28.5 million US\$, of which about 20 million were for the stock of arrears. Following bilateral agreements concluded with some creditors members of the Paris Club, namely Austria, Holland, Canada and the United States of America, the country received debt relief from

these countries amounting to about 2.8 million US\$, for both debt rescheduling and debt cancellations put together.

2. Debt Owed to IMF

The debt owed to IMF, which is managed by the National Bank of Rwanda, consists of two unserviced loans obtained respectively in 1998 from Poverty Reduction and Growth Facility (PRGF) amounting to 71.4 million SDR, of which disbursements made amount to 61.9 million and the loan, in the process of disbursement, to 4 million SDR given in support of the current economic programme. These loans, considered by IMF as concessionary despite their short term, were granted within the framework of PRGF at an annual interest rate of 0.5%, repayable over a ten-year period with 5½ years of grace period.

At 84.3 million US\$ at the end of 2003, the debt stock owed to IMF has been changing slightly since 2001. This apparent stability of the debt expressed in US\$ is however in contrast with the reality and is a result of the effect of the exchange rates. In fact, the debt in SDR, which is IMF debt currency, has recorded a fall since 2001, from 67.1 million SDR to 62.4 million in 2002 and 61.8 million at the end of 2003.

During 2003 financial year, disbursements made by IMF under the Facility granted to the country amounted to 0.8 million US\$, bringing total disbursements of this loan to 1.6 million US\$ (1.15 million SDR).

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003
Drawings			20.4	15.8	29.3	24.9	12.1	0.7	0.8
Service		2.3	3.5	3.1	9.9	12.5	11.5	7.3	2.2
of which : -Principal		1.3	2.4	2.4	8.5	11.1	10.6	6.7	1.7
-Interests		1.0	1.1	0.7	1.4	1.4	1.0	0.6	0.5
Outstanding	26.3	24.0	40.4	56.3	78.8	85.8	83.9	84.0	84.4

Table 54: Development of the debt owed to IMF (in millions US\$)

Source: NBR, Foreign Exchange Inspection and Balance of Payments Department

Debt service paid to IMF during the year amounted to 2.2 million US\$, of which 1.7 million was the principal and 0.5 million as interest. Compared to 7.3 million US\$ paid in 2002, this represents a fall of 70%. Unlike the previous two years where the principal was covered by the relief under the HIPC Initiative, the entire amount due in 2003 was settled with the resources of NBR.

3. Private External Debt

Private external debt was not high and represented 2% only of the total external debt. It consisted of loans contracted with or without Government guarantee by private sector enterprises.

A. Debt Stock

By the end of 2003, the private debt stock was estimated at 33.8 million US\$, of which 12.3 million for Government guaranteed debt and 21.5 million for unsecured debt, representing 37% and 63% respectively. This debt consisted of short-term loans, i.e. a maximum of one year, and long-term loans of more than one year, amounting to 14.5 million and 19.1 million US\$ respectively, or 43% and 57%.

Among the debtors of this category in 2003, Rwanda Development Bank (BRD) takes the lead with a debt estimated at 14.5 million US\$. While it had registered a downward trend the previous years, BRD debt started going up in 2003 reaching twice its level of the previous year, as a result of considerable disbursements from the loan it received recently from the European Investment Bank. KABUYE SUGAR Co. came second with a debt of 7.9 million US\$, followed by BCDI with about 6.0 million US\$.

Guaranteed debt

Guaranteed debt was composed of eight lines of credit of which six were granted in their past by PTA Bank to BRD and two to GOBOKA Asbl (a non profit making organization) for a total amount of 900 thousand US\$, and BCDI for 5.8 million US\$.

As a result of the guarantees by Government to two new enterprises, namely GOBOKA and BCDI/ PRIME HOLDING, the secured debt stock doubled compared to 2002 to reach 12.3 million US\$ at the end of 2003 against 6.5 million in the previous year. Thus by the end of 2003, BCDI and BRD were the main beneficiaries of the guaranteed debt at 5.8 million and 5.6 million US\$ respectively.

Description	1995	1996	1997	1998	1999	2000	2001	2002	2003
EIB 1	0.60	0.60	0.50	0.60	0.50	0.40	0.40	0.50	0.58

TOTAL	14.10	12.80	11.20	11.10	11.20	10.00	8.60	6.61	12.32

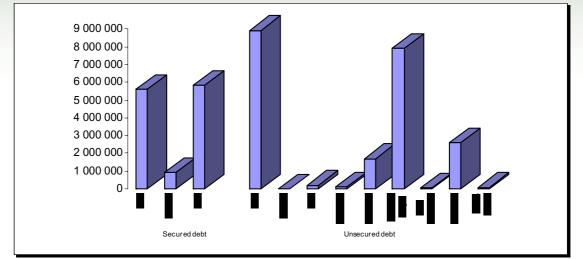

Table 55: Development of outstanding guaranteed private debt (in millions US\$)

Source: NBR, Foreign Exchange Inspection and Balance of Payments Department

Unsecured debt

Unsecured debt consisted mainly of foreign loans contracted directly by private sector enterprises on their own account without any intervention of the Government. These loans included a number of short-term credits meant to finance imports of debtor enterprises.

To date, recorded unsecured foreign loans amount to a total of 21.5 million US\$. KABUYE SUGAR WORKS debt is the greatest with a total of 8.9 million US\$, or 37% of total unsecured debt, followed by SINELAC with a debt estimated at 2.5 million US\$.

Graph 28: Private debt stock structure in 2003 (in US\$)

Source: NBR, Foreign Exchange Inspection and Balance of Payments Department

B. Private Debt Disbursements and Service

Disbursements registered under private debt in 2003 were estimated at 13.1 million US\$, of which 6.5 million for guaranteed debt and 6.6 million for unsecured debt. BCDI was the greatest beneficiary with an amount of 8.2 million US\$, including mainly drawings made on the line of credit granted by PTA Bank. BRD received also substantial disbursements in 2003 amounting to 4.1 million US\$ drawn on the credit granted by the European Investment Bank.

The debt service due under private debt was estimated at 5.8 million US\$ in 2003, of which 4.6 million as principal and 1.2 million as interest. It was divided in short term and long term liabilities, amounting to 2.4 and 3.4 million US\$ respectively, or 41% and 59% of the total.

With 2.4 million US\$ outstanding during the financial year under review, BCDI had the highest liabilities, followed by KABUYE SUGAR WORKS and BRD at 1.6 million and 1.4 million US\$ respectively.

Paid debt service was estimated at 3.8 million US\$, of which 3.4 million for paying-off the principal and 0.4 million for interests. Compared to outstanding debt service, this brought to 2.0 million US\$ the arrears accumulated by the private sector in 2003.

II.4.3 Exchange Rates Development

Exchange rates management in 2003 continued to be a prudent management of foreign exchange needs and available resources of the country. But despite this prudence, the rate of depreciation of the Rwandan franc could not be maintained within the desired limits, due to the very low level of export earnings in 2003 (a decline of 6.3% compared to 2002) and to insignificant foreign support compared to the previous year, while foreign exchange needs continued to increase.

Description	Buying rate	Average rate	Selling rate
Annual average 2002	473.0003	475.3899	477.7351
Jan-03	508.6607	511.2168	513.7728
Feb-03	510.0439	512.4781	515.0405
Mar-03	510.8693	513.4365	516.0037
Apr-03	517.2011	519.8001	522.3991
May-03	522.2989	524.9235	527.5481
June-03	529.0943	532.1001	534.4118
July-03	536.6737	539.3706	542.0674
Aug-03	545.2288	547.9686	550.7307

Nov-03	561.6009	564.4231	567.2452
Dec-03	571.9624	574.8366	577.7108
Annual average 2003	535.2011	537.9087	540.5711

Table 56: Development of foreign exchange rates USD/RWF at NBR

Source: NBR, Foreign Exchange Inspection and Balance of Payments Department

This situation reflected the trend of foreign exchange deficit in commercial banks in 2003. Indeed, the available data for the first three quarters of 2003 show that the balance between foreign exchange resources and their expenditure was negative. Even if it is true that this deficit was less than at the same period in 2002 (-29.8 million US\$), it amounted to a total of 27.5 million US\$ at the end of September 2003.

Continued interventions by NBR on foreign exchange market in the form of foreign exchange auctions to commercial banks contributed to the reduction of the imbalance between supply and demand, by injecting 74.9 million US\$ on the market in 2003 against 53.3 million US\$ in 2002, representing a substantial increase of 28.5%.

Thus, based on the most demanded hard currency on the domestic market, i.e. the US\$, the Rwandan franc underwent depreciation again, the annual average exchange rate with the dollar having increased to RWF 537.91 against RWF 475.37 in 2002, representing a depreciation of 11.6% from one year to the other.

Chapter III: Activities Related to the Main Missions of the Bank

III.1 Implementation of the Monetary Policy

III.1.1 Monetary and Exchange Policy Committee

The aim of the monetary policy is to preserve the domestic and external value of the currency and to safeguard macro-economic balances. In implementing and monitoring monetary and exchange policies, the Bank Management set up a committee called "Monetary and Exchange Policy Committee: MEPC". The main functions of this Committee are as follows:

- Carrying out a review of the monetary situation and assess the degree of adaptability of the existing monetary policy instruments to the imperatives of liquidity adjustment;
- Carrying out weekly projections for the following week of the overall level of liquidity and determine the nature and scope of the Bank's interventions on the money market in order to preserve the state of balance;
- Making proposals of concrete remedial monetary policy measures in case of slippage of financial intermediation activity;
- Monitoring the position of the Rwandan franc in relation to the major settlement currencies and propose, as necessary, appropriate remedial measures;
- Carrying out weekly forecasts for the following week of transactions on the foreign exchange market and determine the nature and scope of interventions to carry out in this connection;
- Monitoring the existing exchange regulations and, in the end, propose new adjustment measures.

III.1.2 Monetary Policy Implementation Activities

To avoid moving in the dark, National Bank of Rwanda set for itself at the beginning of the year some objectives of monetary aggregates growth to realize by the end of 2003 in keeping with the macroeconomic framework adopted by the Government.

To attain these objectives, National Bank of Rwanda continued to use indirect tools for controlling monetary aggregates, namely reserve requirements, interventions on the money market and leading interest rate of National Bank of Rwanda.

Using these instruments and in accordance with the already set objectives, MEPC decided on interventions on the money and exchange market and adjustments of rules and regulations for possible corrections.

Thus, in order to reduce taxes levied on banks during the constitution of reserve requirements in RWF on exchange deposits, the Bank amended the related instruction by stipulating that reserve requirements be constituted separately for deposits in RWF and deposits in foreign currency, maintaining the rate of reserve requirements at 8%. Concerning the discount rate, it was indexed to the monthly weighted average rate of interbank money market, reflecting better the market conditions.

As for the interventions of the Bank on the money market, it is worth pointing out that in addition to surplus liquidity loans, there was a high frequency of issuing Treasury bills for purposes of monetary policy and on behalf of the Government Treasury.

1. Regulatory Provisions

In order to create an environment characterized by perfect transparency of the bank requirements in a context of the liberalization of financial intermediation, National Bank of Rwanda issued instruction No. 01/2003 dated 6th January 2003 relating to the banking requirements tariffs, by requiring banks

and other financial institutions governed by law 08/99 of 18th June 1999 to publish the schedule of minimum and maximum requirements applied to their clients.

For the purpose of stimulating the secondary market of public securities, National Bank of Rwanda decided in January 2003 to give effect to Treasury bills, replacing proofs of claims which used to be given to subscribers by Treasury bills certificates. The aim of this measure was to facilitate the negotiation mechanism of Treasury bills on the secondary market.

Moreover, in order to attract big public and private enterprises and other potential subscribers to participate in bid competitions, National Bank of Rwanda amended instruction No. 05/98 of 24th September 1998 establishing modalities for the issue and negotiation of Treasury bills by fixing the threshold to RWF 50 million for competitive bids. Moreover, the periodicity of Treasury bill issues was reviewed and became weekly instead of monthly, with a single maturity starting from the first week of August 2003. Note also that the first three weeks were devoted to the issues of 4 weeks while the last week of the month had a maturity of 26 weeks.

2. Development of Bank Liquidity

Bank liquidity is defined as being the immediately available funds. The level of liquidity is considered acceptable when it does not cause imbalance at the level of money base, which is the operational objective sought. Surplus liquidity or overliquidity leads to loss of control of the money base and the ensuing harmful effects. The evolution of liquidity is the consequence of its major factors, namely: net foreign assets, Treasury current account, banknotes and coins in circulation, balance of banks' accounts at NBR and other net items.

In fact, the upward change of net foreign assets has a positive impact on the banks' funds. Concerning the Treasury account, its upward movement due either to inflows of budgetary revenues or to a disbursement of budgetary support has a restrictive effect on the banks' liquidity. Conversely, budgetary expenditure increase the banks' funds. For currency in circulation, or money outside the banking system, its upward change has a restrictive effect on the banks' liquidity. As for "other items net" in which are recorded assets and liabilities not classified elsewhere, its increase has a positive impact on the bank liquidity because it reduces the volume of liabilities. The impact of change of these monetary aggregates on bank liquidity is summarized in Table 55 below.

Table 55: Impact of the change of bank liquidity factors

Factors	Change of period n to period n+1	Impact on bank liquidity
Net foreign assets	+	+
Treasury current account	+	-
Banknotes and coins in circulation	+	-
Balance of banks' accounts at NBR	+	+
Other items net	+	+

Source: NBR, Department of Monetary and Financial Markets

During 2003 financial year, the state of overliquidity observed in 2002 continued to improve. However, this expansion of the banks' liquidity conceals divergent developments according to autonomous factors which make up its major determining elements.

Table 56: Development of bank liquidity factors (in billions RWF and end of period)

Source: NBR, Department of Research

In fact, net foreign assets registered a gradual decline and had a restrictive impact on the banks' liquidity, dropping from RWF 72.6 billion in December 2002 to 65.5 billion by the end of December 2003. This reduction is attributable to the big volume of assets sold under the weekly auctions of foreign currency and to the delay in the disbursement of foreign aid and foreign loans.

On the other hand, the debit balance of the account of the Government Treasurer (OTR) at NBR increased to RWF 1.5 billion by the end of December 2003 against a debit balance of 4.8 billion RWF in December 2002. The highest level of Government overdraft was registered at the beginning of October 2003 when the Treasury balance recorded a debit balance of RWF 9.9 billion. This deterioration of the Treasury account was particularly the reason for the expansion of banks' liquidity.

Likewise, banknotes and coins in circulation, which amounted to RWF 30.7 billion by December 2002, rose significantly to RWF 36.5 billion by the end of 2003, representing an upward change of 19%, having thus a restrictive impact on the banks' liquid assets. The "other items net" amounted to RWF -25 billion by end December 2002, and they changed significantly to RWF -30.7 billion by end December 2003, representing an increase of RWF 5.7 billion. This development had the effect of squeezing the banks' liquidity.

Finally, the balance of the banks' accounts at the Central Bank, which amounted to RWF 10.5 billion by December 2002, increased at a moderate rate and stood at 11 billion RWF by December 2003.

The net result of the combined effects brought about by all these factors of liquidity was reflected in increased banks' liquidity which called for regular liquidity draining actions combined with the issue of Treasury bills.

3. Operations on the Money Market

A. Interbank Money Market

During 2003 financial year, liquidity trading on the interbank money market increased to a total amount of RWF 81.5 billion against 40.9 billion the previous year, at the rate of a monthly average of RWF 6.8 billion compared to 3.4 billion. This increase is attributable to the rise of the leading interest rate of NBR and its constant re-organization aimed at consolidating good interbank relationship. The local agreement, a document governing the functioning of the interbank money market signed on 21st March 2003, played a significant role in consolidating the operations of liquidity trading among the banks.

Description	2002						2003								Change

Table 57: Development of money market operations (in millions of RWF)

Source: NBR, Department of Monetary and Financial Markets

B. NBR Intervention on the Money Market

In order to correct the monetary imbalance caused by the continuous expansion of the banks' liquidity, NBR, besides its ordinary negative bids, carried out limited operations of liquidity draining, combined with issues of Treasury bills.

B.1 Liquidity Bids

During 2003, 66 operations of liquidity draining were registered for a total amount of RWF 133.3 billion, of which RWF 88.5 billion were ordinary loans and 44.8 billion for smoothing operations. It is worth pointing out that in 2002, 42 operations of liquidity loans were registered for a total of RWF 70 billion, representing a monthly average of RWF 5.8 billion against 11.11 billion in 2003. As for positive bids, it can be pointed out that no operation was carried out following the abundance of cash observed throughout 2003.

B.2 Pension Window

During 2003, the Central Bank recorded 12 operations of refinancing, of which 10 were for a single bank. Total pension payments amounted to RWF 11.6 billion against 12.5 billion in 2002, representing a downward change of 7%. The overliquidity situation of the banking system explains the poor use by the banks of the pension window of the Central Bank.

C. Securities Market (Treasury Bills)

During 2003, National Bank of Rwanda was able to mobilize on the Treasury bills market, a total of RWF 74.6 billion compared to 58.9 billion in 2002, representing an increase of 27%. Of this amount, RWF 69.4 billion were in the form of Treasury bills on behalf of the Government Treasury account, and RWF 5.2 billion for monetary policy purposes. This big volume was due to the frequency of Treasury bills issues and the adjustment of the related regulatory base which enabled economic agents other than the banks to take part in competitive bids.

D. Interest Rates Development on the Money Market

Compared to the year 2002, the interest rates applied on the money market continued to rise. Standing at 10.5% in December 2002, the rates applied to negative bids operations increased by one percentage point to 11.63% by end December 2003. This increase of bid rates was due to the big volume of monies borrowed by the Central Bank in order to fulfill the objectives of the 2003 monetary programme on one hand, and the quasi-monopoly of one local bank in terms of the liquidity held, on the other.

Graph 29 : Money market rates development in 2003

Source : NBR, Department of Monetary and Financial Markets

With regard to the rate applied to refinancing applications, NBR introduced restrictive conditions by adjusting upwards the leading interest rate so as to slow down the growth rate of credit to the private sector. This rate rose to 14.5% since September 2003 against 13% in 2002.

Concerning the weighted average rate of the interbank money market, it is worth pointing out that it recorded a serrated development since it stood at 9.91% in December 2002, rose to 11.82% in November 2003 and fell back to 10.38% in December 2003. This rise of the rate applied on the call money operations was due to the high demand of liquidity on this market by those banks experiencing tight liquidity.

The rates applied on the Treasury bills market followed the same upward trend. Standing at 10.49% in December 2002, the weighted average rate on this market continued to rise and reached its highest levels of 12.74% and 12.68% in November and December 2003 respectively, representing an increase of more than two percentage points compared to the previous year.

III.1.3 Management of Special Funds and Lines of Credit

Special funds and lines of credit are managed by NBR on behalf of the Rwandan Government, following the signing of a Management Protocol or a Subsidiary Financing Agreement. Currently, NBR manages three (3) Special Funds and five (5) Lines of Credit.

1. Special Funds

A. Guarantee Fund of the Dairy Cattle Breeding Development Support Project

The aim of the Dairy Cattle Breeding Development Support Project (PADEBL) is to contribute to the improvement of food security and the reduction of poverty by meeting domestic demand of milk and meat and increasing the incomes of the operators. The fund of RWF 300 million was earmarked for Participating Financial Institutions (PFI) to cover financial risks up to 50% through compensation in

case of failure by the investor, i.e. 50% of the principal and interests over a maximum period of three years as a guarantee for each secondary loan granted to operators in the livestock sub-sector.

The Loan Agreement between the Government of Rwanda and the African Development Bank was signed on 16th January 2001. The Management Protocol of the Guarantee Fund between the Government and NBR was signed on 7th February 2003. To date, two projects have been guaranteed to the tune of RWF 5.075 and 7.250 million respectively.

B. Housing Finance Fund

The Housing Finance Fund was established by Act No. 06/01 of 22nd June 1998 to provide best terms finance to households wishing to build their first house of a suitable standing or to rehabilitate their existing house. The management of the fund was entrusted to NBR through the management agreement between the Government and NBR. At the Cabinet meeting of 31st July 2003, Government decided to transfer this fund to Rwanda Mortgage Fund (CHR) and a technical commission was set up to study the practical modalities of this transfer. In 2003, NBR granted refinancing from this fund to the tune of 111 million RWF.

Table 59: Housing Finance Fund (in RWF)

	Construction	Completed	Total
Number of houses	15	1	16
Amount	107 047 240	4 000 000	111 047 240

Source: NBR, Department of Monetary and Financial Markets

C. Special Guarantee Fund

The Special Guarantee Fund is in liquidation since 2002, and a liquidation commission was set up under the chairmanship of the Privatization Secretariat. In 2003, NBR compensated a client of BCR to the tune of 48.2 million RWF. Cases that were guaranteed in terms of the principal by the Special Guarantee Fund as at 31/12/2003 amounted to 56.5 million RWF.

Source: NBR, Department of Monetary and Financial Markets

2. Lines of Credit

A. Rural Investment Facility

According to the Credit Agreement signed between the Government of Rwanda and the International Development Association (IDA) on 25 April 2001, Rwanda received a credit of 37.2 million SDR (first phase) to finance the Rural Sector Support Project (RSSP).

RSSP has several components, including the "Rural Investments Facility -RIF" with a funding of 5.62 million SDR for the first phase, running from 2001 to 2005. RIF is managed by National Bank of Rwanda and is used to finance partially medium and long term credits granted by Participating Financial Institutions (PFI) for rural development projects. The mission of RIF is:

- To contribute to investments of private operators who take the risk of investing in agrobusiness activities;
- To reduce interest charges on bank loans for such activities.

The project took off officially on 24th October 2001 and as at 31st December 2003, 161 projects had been financed to the tune of RWF 1 186 531 347, of which RWF 767 518 885 were released in 2003.

N°	Type of Activity	Financing granted	%
1	Livestock (cattle)	446 804 085	58.21
2	Livestock (small animals)	26 286 600	3.42
3	Cash crops	118 667 640	15.46
4	Food crops	28 840 000	3.76

6	Marketing of agricultural produce	12 000 000	1.56
7	Fisheries	6 576 560	0.86
TO	ſAL	767 518 885	100

Table 61: Activities financed under RIF in 2003 (in RWF)

Source: Department of Monetary and Financial Markets

B. Preferential Financing Facility for Long Term Loans to Agricultural Exports and Agro-industries

National Bank of Rwanda established this financing facility on 27th June 2003 for long term investment loans to agricultural and agro-industrial activities - for exports or imports substitution - which contribute to foreign exchange savings.

Resources for this fund come from the repayments of Government's consolidated debt to National Bank of Rwanda. Long and medium term loans to agricultural and agro-industrial projects (including livestock) considered bankable by participating banks and which produce easily measurable net savings of foreign exchange are eligible for financing by this facility. This includes financially viable import substitution activities. However, priority is given to export activities if resources are found to be insufficient to cover potential needs. The amount of participation of the Facility in a project considered eligible is limited to two hundred million RWF in order to expand the beneficiaries' base. However, NBR can disregard this limit depending on available resources and expressed needs.

To date, only one project has been financed to the tune of RWF 77 920 000 on 14th October 2003. A second request for financing was rejected because the project was not eligible. It concerned a financing deviation for a project for the establishment of a unit for beryl processing.

C. Cash Crop Development Project

The aim of the project is to maximize and diversify income for cash crop farmers through the development of commercial processing activities and financially viable trading activities. To this end, the project will concentrate on cash and/or export crops such as coffee and tea. It will be implemented in four provinces: KIBUYE, GIKONGORO, KIGALI-NGALI and KIBUNGO.

The Government entrusted to NBR the management of 2 910 000 SDR, of which 1 200 000 SDR were for long term loans, 660 000 SDR for short term loans and 1 050 000 SDR for overdraft facilities.

NBR undertook to refinance PFIs for eligible projects up to:

- 100% for long term credits;
- 100% for short term credits for small and medium scale enterprises (SME);
- 75% for short term credits for producers of tea and coffee;
- 75% for overdraft facilities.

According to the 2004 business plan adopted by the Board of Directors of the project, the line of credit component will start its activities early 2005.

D. Agricultural and Rural Market Development Project -PDMAR (IDA 3270-RW)

The Line of Credit IDA 3270-RW is one of the components of PDMAR signed on 16th July 1999 between the Government of Rwanda and IDA. This line of credit is meant for improving farmers' access to seasonal credits for purchase of modern agricultural inputs.

With an initial capital of 1 495 000 SDR and under the management of NBR, this line of credit was used to finance short term credits in Rwandan francs granted by PFIs to commercial sub-projects involved in the importation of modern agricultural inputs.

As a result of lack of sufficient use of this facility, the line of credit was reduced from 1 495 000 SDR to 1 330 000 SDR in March 2002 and ended up at 922 045 SDR in June 2003. The latter amount was absorbed at 99.2%. National Bank of Rwanda returned the difference of 6 540.79 US\$ to IDA on 15th December 2003. It will be recalled that the "Line of Credit" component wound up its activities on 30th June 2003 and PDMAR closed on 30th December 2003.

E. Projet d'Appui au Développement du Secteur Privé (IDA 2541-RW)

The line of credit ended in December 2000. Currently, NBR is monitoring repayments by PFIs. The specific objective of the line of credit was to make available refinancing funds so as to enable PFIs to finance new and existing private investment sub-projects. Fourteen sub-projects were financed and half of them have already reimbursed all their commitments.

III.2 Exchange Policy and Operations

III.2.1 Exchange Policy

La Politique de change a été marquée par la révision de la réglementation des changes pour y opérer des réformes visant essentiellement à canaliser dans le circuit officiel la demande de devises adressée au marché parallèle, à lever certaines entraves à l'amélioration de l'environnement des affaires, à expliciter certains passages de la réglementation des changes à caractère ambigu en vue de lever toute éventualité d'équivoque et à substituer le contrôle par sondage au contrôle systématique jadis effectué sur toutes les opérations de change validées par les intermédiaires agréés. Parmi les réformes opérées, il y a lieu de relever:

- Introduction of provisions enabling banks and forex bureaux to finance low cost imports mainly from neighbouring countries and sell to their clients foreign currency to carry out various transactions involving small amounts with minimum formalities ;
- Specification of procedures to follow in international trade ;
- Demarcation between capital transactions which authorized banks can carry out freely and those that require prior authorization of the Central Bank.

In addition, with regard to capital transactions, the new foreign exchange regulations introduced an innovation requiring any foreign investment to be registered with National Bank of Rwanda, which will issue an investment certificate on the basis of which foreign investors may transfer freely incomes from investments and sale of assets in case of disinvestment. This procedure on the other hand makes it possible to constitute a database on foreign direct investment in the country and foreign private debt.

III.2.2 Exchange Operations at NBR

During 2003, the main exchange transactions of NBR consisted of purchasing and selling foreign currencies for its own needs, the needs of Government and of other clients.

Total foreign exchange earnings of the bank amounted to 218.7 million US\$ and its expenditure to 248.5 million US\$, representing a total negative balance of 29.8 million US\$ in 2003, while in 2002, NBR's foreign exchange transactions yielded a positive result of 31.4 million US\$.

The fall in foreign exchange earnings in 2003 was due to the low level of disbursements of budgetary support, representing a decrease of 29.0% compared to 2002. On the other hand, other incomes realized mainly from buying foreign currency from projects financed from external resources were relatively substantial compared to 2002 since they amounted to 90.5 million US\$ in 2003 against 65.3 million, representing an increase of 38.6% over the previous year. Remarkable performance in foreign exchange was registered during the first and fourth quarter of 2003, periods when Rwanda received significant budgetary support, particularly from the European Union and Great Britain.

The most important expenses were incurred in the form of foreign exchange auctions to authorized banks, foreign exchange expenses on behalf of Government and withdrawals on foreign exchange accounts by the banks and other clients.

		lst Quart03	2nd quart. 03	3rd quart. 03	4th quart. 03	Total

Balance		28.2	6.4	6.2	47.1	31.4

Table 62: Foreign exchange transactions of NBR in 2003 and 2002

Source: NBR, Department of International Operations

Auction sales of foreign currency to the banks rose to 74.9 million US\$ in 2003 against 58.3 million in 2002, while current foreign currency expenditure of Government amounted to 58.0 million US\$ in 2003 against 49.5 million in 2002, representing increases of 25.8% and 17.2% respectively. Withdrawals on foreign exchange accounts of NBR by the banks and other clients amounted to 71.7 million US\$, representing an increase of 1.1% over the previous year. Total expenditure in foreign currency for the above mentioned items represented 82.3% of total foreign currency expenditure of the Bank in 2003.

III.3 Management of Foreign Exchange Reserves

For purposes of better management and better returns, foreign exchange reserves consisting of foreign assets of the (official) public sector of Government are entrusted to the Monetary Authority and remain under its control. The aim of this management arrangement is to attain rational utilization of foreign exchange within the framework of monetary and foreign exchange policy so as to strengthen the value of the national currency and the stability of prices. Foreign exchange reserves are meant also to ensure international settlements between residents and non residents, particularly settlement of foreign debt service. They are also used as precautionary balance to meet unforeseen external shocks.

It is worth noting that management of foreign exchange is based on explicit parameters in relation to acceptable liquidity, market and credit risks, and that reasonable profits must be generated from invested funds.

From early 1990s, central banks recorded some progress in the sophisticated management of their foreign exchange reserves. In this connection, they as much as possible adopted an increasingly active approach in their role of managers of foreign exchange reserves.

It is in this perspective that it became necessary for National Bank of Rwanda to review the composition of the Investment Committee in 2003 in order to improve the technical aspect of its operations and strengthen its importance.

Chaired this time by a member of the Bank's management, the Investment Committee is responsible for putting in place an operational framework governing the activities of foreign exchange management, particularly the review of benchmarks, the choice of liquidity and investment strategies, the review of the limits for each consideration and the choice of new considerations, the review of the maximum exposure to each consideration and acceptable minimum rating, the approval of agreements for the conservation of securities and other necessary contracts, the evaluation of investment performance and monitoring of compliance with authorized operations.

The Committee is furthermore responsible for the formulation of technical and operational recommendations in the field of foreign exchange management and investment policy of the Bank.

During 2003, the Investment Committee carried out several activities related to foreign exchange management through its weekly meetings. The following important decisions were taken during the period under review and are binding ipso facto:

- Partial reimbursement of NBR overdraft (7.5 million Euro from 15 million);
- Deposits of about 40 million US\$ with external management;
- Adoption of a new pattern of working documents for meetings to ensure better management of foreign exchange and credit risks and better monitoring of the fundamental criteria of security, liquidity and profitability;
- Processing of maturing deposits and new term deposits.

III.3.1 Development of NBR's Foreign Exchange Assets

In 2002, foreign exchange reserves management generally experienced an unfavourable international financial environment which extended into 2003. Interest rates fell once again. For example, the base rate on the Euro fell from 3.25% by end 2001 to 2.75% and 2% by end 2002 and 2003 respectively. The Bank nonetheless managed to post satisfactory annual results.

These results were achieved thanks to the relatively high level of foreign exchange reserves (average 225 million US\$) at the Bank's disposal during the year and to the very good performance of arbitrage operations. It is worth pointing out also that the depreciation of RWF by 13.37% against the US\$ in 2003 had an impact of the same scale on the results of the year.

Like in the previous year, membership to Bloomberg Agency contributed to good results on arbitrage. This tool facilitated the monitoring in real time of the development of foreign exchange rates quoted on the international foreign exchange market and the levels of interest rates on deposits, making it thus possible to carry out foreign exchange operations at the appropriate time and making deposits at the most favourable rates. The performance of the main revenue items linked to international transactions is shown in the following table.

Table 63: Financial performance in 2003 (in thousands of RWF)*

Items	Revised budget 2003	Performance 2003	Performance rate

Source: Department of International Operations

* Compared to the financial performance of 2002 which amounted to RWF 3,915,603,050, there was an increase of 20%, which is not significant if account is taken of the impact of the exchange rate on the volume of income. In constant terms, performance for 2003 was on the whole the same as for 2002.

III.3.2 Interests on Term Deposits

Deposits in 2003 amounted to RWF 965,159,660 compared to RWF 1,389,986,170 in 2002, representing a decrease of 44%, and this situation was mainly due to the continuous fall in interest rates on the international market and the decrease of the volume of term deposits (reason: increase of funds deposited with external management and in call money). Compared to the revised budget estimates for the year, deposits for 2003 recorded nonetheless a positive difference of 21%.

The year was characterized by a very low level of interest rates on the international market, in particular with regard to US\$ which is the main currency of our reserves. Interest rates on US\$ and the Euro reached the historical floor of 1% and 2% respectively, while that of the GBP stood at 3.50% and increased by 25 basis points towards the end of 2003.

1. Interests on Call Money

Interests on call money for 2003 amounted to RWF 376,656,530 against RWF 433,454,389 in 2002, representing a reduction of 13%. Compared to the revised budget estimates for 2002, the figure for 2003 was higher by 11.5%.

The very low level of interest rates on the international market explains this poor performance despite the considerable liquidity kept on the current accounts in 2003.

2. Interests on Resources with External Management

With regard to these funds, the Bank made profits of RWF 719.3 million in 2003 against RWF 274.2 million in 2002. For 2003, these funds represented 3.7% more than the budget estimates under this item, a difference due mainly to the good performance of the funds entrusted to Crown Agents. These funds, estimated at 20.5 million US\$ at the beginning of the year, then to 30 million US\$ on 1st June, recorded an annual rate of return of 2.51%. This level is by far higher than the market bracket of between 1 and 1.15% for similar maturity.

The funds entrusted to Citibank, estimated at 25.4 million US\$ as at 1st January 2003, posted a rate of return of 0.98% only and was suspended in November 2003. The fund managed by Lloyds (SWIP Global Liquidity Fund), which was estimated at 10 million GBP as at 1st January 2003 and then reduced to 5 million as at 1st October, recorded an average annual rate of return of 3.36%, corresponding virtually to the indicative rate of GBP on the international market.

3. Profits from Arbitrage on Foreign Currencies

These funds amounted to RWF 1.52 billion in 2003 against 0.97 billion in 2002, representing an increase of 57%. This performance was a result of the use of the Bloomberg tool and considerable liquid assets kept on the current accounts which facilitated the realization of arbitrage operations.

In accordance with the new operational guidelines for the investment of foreign exchange reserves, the Bank reduced the credit risk of private sector institutions and increased it for sovereign institutions (central banks) and international organizations.

Furthermore, specific indicators based on the cover of external liabilities and external payments needs enabled the Bank to exercise a better control of foreign exchange risks.

III.3.3 New Financial Instruments in NBR's Portfolio

In 2003, the Bank made some progress in the diversification of its portfolio. For the first time since the 1994 war, it made deposits in American Government's Treasury bills (UST-Bills).

It is worth pointing out that some specific projects linked to foreign exchange reserves management were implemented in 2003 while others were started only during the year. The most important of these projects are:

1. Computerization of foreign exchange transactions: this project has almost been completed, but there are still some technical problems with regard to the use of the software for some transactions.

- 2. Training programme in the management of the portfolio. CAAML has agreed with NBR to give distant training in the management of the portfolio to the four employees of the Department of International Operations. The course started in July 2003 and is progressing well.
- 3. Restructuring of the Department of International Operations. The aim of this exercise was to correct the weaknesses observed in the former structure, particularly some confusion of functions among different units.

Finally, the technological upgrading of the Department of International Operations with subscription to Reuters planned for 2004 and capacity building in management through training of the employees of this Department may contribute to better management of foreign exchange reserves.

III.4 Currency Issuing Activities

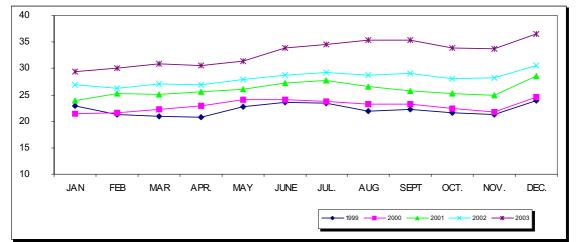

III.4.1 Management of Currency in Circulation

1. Development of Currency Circulation Outside NBR

During 2003 financial year, currency in circulation outside NBR recorded high growth between May and September, increasing from RWF 31.41 to 35.41 billion, unlike in other years when the highest change was recorded in the period June-July because of the coffee season. This situation could probably be a result of the combined effects of the coffee season and the electoral campaign.

Table 66: Development of currency in circulation for the last five financial years (in billions of RWF)

Description	Jan.	Feb	March	April	May	June	July	Aug.	Sept.	Oct.	Nov	Dec
1999	22.89	21.19	20.96	20.84	22.81	23.63	23.48	22.01	22.31	21.67	21.30	23.98
2000	21.44	21.61	22.19	22.99	24.12	24.06	23.71	23.25	23.18	22.42	21.69	24.61
2001	23.92	25.25	25.03	25.58	26.14	27.31	27.78	26.51	25.72	25.31	24.99	28.58
2002	26.87	26.31	27.04	26.85	27.86	28.77	29.29	28.69	29.13	28.07	28.25	30.52
2003	29.45	30.02	30.87	30.57	31.41	33.89	34.49	35.35	35.41	33.91	33.73	36.47
Source: NBR. I	Departmer	nt of Curi	ency Issu	e and Bar	nkina Ope	erations						

Graph 32: Development of currency in circulation 1999-2003 (in billions of RWF)

Source : NBR, Department of Currency Issue and Banking Operations

Another phenomenon to point out is that the year 2003 was significantly different from 2002 if one considers the changes from one year to the other for previous financial years. This situation is closely linked to the development of expenditure incurred on the Treasury account.

2. Supply of Banknotes and Coins

Begun in 2002, the exercise involved withdrawing banknotes and coins bearing the old coat of arms and continued into 2003 financial year. In fact, the new banknotes of 100 RWF and the coins of 1,5,10 and 20 RWF which were ordered in 2002 were delivered in 2003.

Date of contract	Denomination	Quantity ordered	Quantity delivered	Total cost
15/11/2002	100 RWF	80,000,000 notes	82,800,000 notes	2.451.763 Euros
20/12/2002	1 RWF	1,500,000 coins	1,490,000 coins	
-	5 RWF	10,000,000 coins	1,013,000 coins	
-	10 RWF	10,000,000 coins	10,000,000 coins	
-	20 RWF	10,000,000 coins	10,000,000 coins	422.057,88 USD

Table 67: Quantities ordered and delivered

Source : NBR, Department of Currency Issue and Banking Operations

It should be pointed out that the new banknote of RWF 100 is in circulation since 17th June 2003 and that the demonetization of the old RWF 100 banknotes (79-89 issue) became effective on 31st January 2004. The new coins of RWF 1, 5, 10 and 20 will be put in circulation as soon as the Presidential decree making them legal tender will be signed.

On the other hand, the 7,000,000 coins of RWF 50 ordered also in December 2002 should be put in circulation at the beginning of March 2004.

Still under the programme of replacing those banknotes currently in circulation, the Bank ordered 7,000,000 notes of RWF 5 000 denomination in 2003. This is a highly protected banknote by modern security features to reduce the risks of forgery. This note should be delivered by April 2004.

Finally, preparations for ordering banknotes of RWF 1,000 and 500 have been finalized and the appropriate contract was signed early January 2004; delivery is expected by August 2004.

3. Issue of New Banknotes and Coins

During 2003 financial year, National Bank of Rwanda issued RWF 15,977.8 million, of which 15,904 million were banknotes and 73.8 million were coins as shown in the table below by nature (banknotes and coins) and by denomination for the last three years.

12010 00: 13300 01 D			10 2005		
Description	RWF 100	RWF 500	RWF 1000	RWF 5000	TOTAL
2001	886,000	600,000	3,020,000	5,700,000	10,206,000
2002	712,000	1,070,000	4,140,000	5,300,000	11,222,000
2003	2,074,000	1,260,000	5,870,000	6,700,000	15,904,000

Table 68: Issue of banknotes (in thousands) between 2001 and 2003

 $\textbf{Source}: \mathsf{NBR}, \ \mathsf{Department} \ of \ \mathsf{Currency} \ \mathsf{Issue} \ and \ \mathsf{Banking} \ \mathsf{Operations}$

Table	69: Issue	of	coins	(in	thousands)	between	2001	and 20	03
-------	-----------	----	-------	-----	------------	---------	------	--------	----

Description	RWF 1	RWF 5	RWF 10	RWF 20	RWF 50	TOTAL
2001	70	5,750	9,130	9,030	9,010	32,990
2002	340	5,090	8,410	18,790	33,150	65,780
2003	490	3,240	4,850	24,460	40,760	73,800

Source: NBR, Department of Currency Issue and Banking Operations

From the above two tables, it emerges that issues of banknotes and coins were in general higher in 2003 than in 2002 and 2001, and this contributed to significant increase of currency in circulation during the same period.

The high demand for the RWF 100 note in 2003 was a result of the issue of the new banknote for this denomination effective from 17th June 2003, and the demonetization of the same RWF 100 notes which had been issued before 2003. On the other hand, the low demand for the RWF 5 and 10 coins which was offset by the high demand for the RWF 20 and 50 coins resulted from the shortage of stock for these coins at Central Bank. This situation will be corrected through the issue of new coins expected at the beginning of 2004.

4. Destruction of Banknotes Unfit for Circulation

The destruction of banknotes unfit for circulation (NUC) during 2003 financial year involved a sum of RWF 19.8 billion, or 85% of total cash reserves in banknotes unfit for circulation amounting to RWF 23.3 billion for the period in question. As at 31st December 2002, banknotes unfit for circulation amounted to RWF 14.2 billion.

Denomination	Amount in RWF	NUC cash reserves as at 31/12/2003
5,000	6,900,000,000	1,735,000,000
1,000	7,680,000,000	856,000,000
500	1,155,000,000	233,250,000
100	4,062,000,000	636,100,000
TOTAL	19,797,000,000	3,460,350,000

Table 70: Unfit banknotes broken down by denomination

Source: NBR, Department of Currency Issue and Banking Operations

III.4.2 Control of Counterfeit Banknotes

Concerning forgery of banknotes, denominations of RWF 5,000 and 1,000 (1998 issue) are of course the most targeted by counterfeiters. Nevertheless, during 2003 financial year, there were less forged banknotes than in 2002 amounting to 974, of which 946 were of RWF 5,000 denomination.

Denomination	5000	1000	500	100	Total
Origin					
NBR (on counters)	16	6	0	0	20
NBR (during counting)	51	180	8	0	219
National police	187	7	0	0	188
TOTAL	254	193	8	0	455

Table 71:	Number	of for	rged	banknotes	recorded	in	2003	(RWF)	

Source: NBR, Department of Currency Issue and Banking Operations

However, the RWF 1,000 banknote was much targeted by counterfeiters with 193 forged banknotes identified in 2003 against 42 only in 2002. It is this situation which, among others, led to the strengthening of security features in the design of the new banknotes currently under printing.

Denomination	RWF	5000	RWF	1000	RWF	500	RWF	100	Tot	al
Origin	2002	2003	2002	2003	2002	2003	2002	2003	2002	2003
B.N.R (on counters)	6	16	0	6	0	0	1	0	7	22
NBR (during counting)	26	51	5	180	3	8	1	0	36	239
BCDI	25	0	2	0	0	0	0	0	27	0
BCR	2	0	0	0	0	0	0	0	2	0
BACAR	4	0	0	0	0	0	0	0	4	0
ВК	0	0	3	0	0	0	0	0	3	0
UBPR	3	0	0	0	0	0	0	0	3	0
National police	916	187	14	7	0	0	0	0	930	194
Prosecution	4	0	18	0	0	0	0	0	22	0
TOTAL	986	254	42	193	3	8	2	0	1033	455

Table 72: Number of counterfeit banknotes recorded in RWF (comparison between the last 2 years)

Source: NBR, Department of Currency Issue and Banking Operations

With regard to counterfeit foreign currency banknotes during 2003 financial year, the Bank recorded 184 forged banknotes as shown in the following table 73, compared to those registered in 2002.

Table 73: Registered counterfeit foreign currency banknotes

Denomination	50	000	5	500	1	00	Į	50	2	0	Ę	5	Tot	al
Foreign currency	2002	2003	2002	2003	2002	2003	2002	2003	2002	2003	2002	2003	2002	2003
USD (banknotes)	-	-	-	-	95	79	16	1	151	-	-	1	262	80
USD (T/C)	-	-	5	-	-	-	-	-	-	-	-	-	5	-
Tanzanian Shilling	-	104	-	-	-	-	-	-	-		-	-	-	104
Total	-	104	5	-	95	79	16	1	151	-	-	1	267	184

Source: NBR, Department of Currency Issue and Banking Operations

It can be seen that counterfeit foreign currency banknotes are primarily in US dollars. On the other hand, there were less occurrences of counterfeiting in 2003 compared to 2002.

In order to stop counterfeit banknotes from reaching the bank's counters, the Bank has already ordered appropriate equipment to be installed at the paying counters for detecting them.

III.4.3 Clearing House

Table 74 below gives a summary of the activities of the Clearing House during 2003. It appears that in 2003, the Clearing House processed 134, 634 operations relating to presented cheques with the value of RWF 248,984,175,399, and 65,849 operations relating to transfers amounting to RWF 271,557,211,595, or a total of 200,483 operations with the value of RWF 520,541,386,994. On the other hand, the number of operations processed monthly did not vary considerably, being on average 10,174 cheques and 5,487 transfers.

	Presente	d cheques	Presented	transfers
Banks	Amount (in RWF)	Number of operations	Amount (in RWF)	Number of operations
NBR	8,408,814,557	9,915	104,972,432,348	23,259
BCR	67,900,431,423	32,229	68,843,571,341	12,511
ВК	55,530,903,339	38,430	25,545272528	17,979
BACAR	23,210,341,823	12,518	6,841,200,562	3,305
BCDI	59,488,371,520	25,231	35,182,787,099	5,556
BANCOR	18,158,845,444	7,120	11,089,368,748	727
COGEBANQUE	9,737,015,889	7,466	3,016,255,823	1,143
UBPR	6,549,451,404	1,725	16,066,323,146	1,369
TOTAL	248,984,175,399	134,634	271,557,211,595	65,849

Table 74: Summary of activities of the Clearing House

Source: NBR, Department of Currency Issue and Banking Operations

It is worth pointing out that the Union of People's Banks (UBPR) started sitting on the Clearing House with effect from 14th February 2003, and this has been beneficial to Government employees and other clients of UBPR. In fact, salaries which used to reach the beneficiaries after a week are now entered on the beneficiaries' accounts within 48 hours starting from the day the payment or transfer order is processed.

Concerning presented cheques, the most important operations were carried out by the three banks (BCR, BK and BCDI) which are involved in the transactions with Rwanda Revenue Authority. As for transfers, the role of NBR becomes important in that it processes transfers in relation to the payment of salaries of Government employees, employees of Government institutions and projects, as well as payment of invoices issued by some private and public companies.

It is worth mentioning that an automation project for clearing operations is under study, and it will facilitate and speed up the exchange of data between NBR and the banks.

III.4.4 Importation of Banknotes and Traveller's Cheques

To facilitate transactions with the rest of the world, the Bank imported banknotes amounting to 6 million US dollars and 200 thousand Euros, and US\$ and Euro traveller's cheques amounting to 1.55 million and 443 thousand respectively.

Besides the importation of banknotes, foreign currency needs were covered by other inflows of foreign exchange, coming particularly from payments to the Road Maintenance Fund, ORTPN and Government accounting. These payments amounted to nearly 2 million US\$, of which 1 million for ORTPN.

 Table 75: Comparison of movement of banknotes and traveller's cheques (in US\$ and Euros)

			INFLOW	OUTFLOWS				
Type of foreign currency	Period	2001	2002	2003	2001	2002	2003	
Banknote	USD	6,671,647	8,652,978	7,987,063	7,507,295	8,691,417	7,326,361	
	EURO	-	23,150	250,875	-	10,500	119,145	
Traveller's cheques	USD	1,850,000	2,519,500	1,550,000	1,328,000	2,417,250	1,634,550	
	EURO	-	300,000	443,000	-	164,100	455,250	

Source: NBR, Department of Currency Issue and Banking Operations

Even though the demand for banknotes was less in 2003 compared to 2002, it is worth noting that the use of cash remains predominant with some clients of the Bank.

III.5 Banking and Financial System

III.5.1 Banking Supervision

Supervision activities were carried out according to the existing generally used procedures: documentbased inspection and on-site inspection. The regulatory and accounting framework was also strengthened through the establishment of a new accounting system for commercial banks and new guidelines.

1. Document-based Inspection

Like in 2002 financial year, document-based inspection continued to be used through the processing and analysis of banks' reports with a view to detecting on time risks which are inherent in some banks' activities:

- Production of quarterly banks' analysis notes concerning the financial structure, the quality of the loans, profitability, solvency and liquidity, as well as prudential mechanisms;
- Production of ad hoc reports on specific subjects such as banking operations;
- Meeting with banks management to discuss the most important risks identified during document-based inspection;
- Standardization of the quarterly analysis notes on the entire banking sector, including some financial institutions; and
- Preparation of a report on non performing debtors of the banking system.

2. On-site Inspection

Three on-site inspections were carried during 2003; including one general inspection and two others on the credit component. In addition to these three inspections, another one was carried out on postal cheques accounts department of the National Post Office.

The aim of these inspections was to assess the organization and the financial health of the banks as well as loan risks, and the following were the main findings of these inspections:

- Lack of a procedures manual of describing the working modalities of operational units
- Internal controls in some banks were hardly operational ;
- Weaknesses in the information system of accounting operations and management of activities;
- Understatement of credit risk due to failure to fully comply with policies, procedures and sound and prudent practices in the granting of loans, accepting weak guarantees and bad classification of loans; and
- Violation of prudential standards due to inadequate equity capital. For the most part, this related to solvency, risks incurred on the leadership, board members and shareholders as well as related groups, risks incurred on debtors in general....

In order to remedy the identified weaknesses, NBR made recommendations to the banks, including the following, among others:

- Ensuring that loans applications are analyzed and reviewed adequately in conformity with its credit granting policy;
- Establishing a fair and reasonable assessment method of the repayment capacity of the borrowers;
- Requiring more acceptable guarantees in terms of regulations, strengthening the assessment of mortgage securities through the establishment of an information system;
- Complying with the preparation process of assets classification which must be reviewed so as to ensure that the information is complete and accurate ;
- Taking into consideration all the liabilities during their classification, including commitments by signature;

Submitting to NBR a realistic strategic plan and an action plan for increasing equity capital with the aim of reverting to the position of solvency in keeping with the prudential standards and compliance with all other standards.

3. Strengthening the Regulations

In terms of regulations, activities relating to bank supervision were characterized by the following:

- Finalization of the new accounting system for commercial banks and reporting models to become effective from January 2004 ;
- Review and publication of directives No. 07/2003 of National Bank of Rwanda concerning the solvency of banks and other financial institutions, No. 08/2003 of National Bank of Rwanda relating to the standards of risk classification and risk cover applicable to banks and other financial institutions, No. 09/2003 of National Bank of Rwanda concerning the management of loan commitments of banks and other financial institutions; and
- Publication of directive No. 10/2003 on the regulation of discount house activities and the modalities of exercising these activities.

III.5.2 Banks Restructuring

Like in 2002, three banks continued to be under the recovery plan scheme during 2003. These plans involved in particular:

- Adequacy of their equity capital to the prudential rules published by the Central Bank;
- Compliance with the ratios of risk diversification and monitoring of credit growth ;
- Implementation of an operating costs rationalization policy ;
- Strengthening efficiency in the management of funds ;
- Reduction of non-performing loans and setting-up a recovery plan; and
- Development of a corporate governance policy, adoption of a training plan and strengthening efficiency in internal control system.

In 2003, the implementation of these plans started to bear fruits: the supervision of two banks in 2002, one under a temporary administrator and the other under a temporary controller appointed by NBR, ended, as was the reinforced supervision of the third bank. In two of the banks, comparative results carried out quarter by quarter showed improvement from a negative position in 2002 to a positive one in 2003, due particularly to credit growth control, the rationalization of operating expenses and efforts to recover non-performing loans.

- Housing financial institutions	1	-	1	-

Source: NBR, Department of Banking Supervision

Under the policy of privatization, the Government, being one of the main shareholders in one of the commercial banks in difficulties, decided to sell its share to a private investor. The sale process will be completed in 2004.

III.5.3 Rehabilitation of the Banks' Loan Portfolio

In the rehabilitation exercise of the banks loan portfolio starting from 2002, an Interbank Commission was set up, and this commission produced a report which was discussed by Cabinet. At the end of these discussions, an Ad Hoc Commission was set up composed of MINECOFIN, MINIJUST, MINITERE, the Commission for Judicial Reform, NBR, Rwandan Banks Association and Kigali City Council. This Commission was tasked with finding a solution to the problem of the registration of mortgages, judicial delays and report to Cabinet.

Table 77: Development of the main indicators of the banking and financial sector

	30/09/03 ¹	31/12/02	Variation
2.Deposits (in thousands of RWF)	131 652 835	122 677 048	7,3%
3. Loans (in thousands of RWF)	99 711 170	85 942 641	16%
4. Quality of loans portfolio (bal. sheet+ off-bal. sheet)			
Total loans of which:	122 856 710	111 606 049	10%
Off-balance sheet	19 750 344	17 804 278	13%
Non-performing loans (NPL) of which:	39 742 869	38 517 236	3,2%
Off-balance sheet	1 068 679	1 015 951	13,5%
Mobilised funds	21 479 086	22 722 681	5,5%

4. Equity capital (in thousands of RWF)	6 720 619	3 909 054	71,90%
5. Result (in thousands of RWF)	-10 140 468	-11 528 529	12%

Source: NBR, Department of Banking Supervision

Since the establishment of the Interministerial Commission, Central Bank has already taken concrete action:

- 1. At the prudential level, Central Bank revised three relating directives ;
- 2. Concerning the exchange of information for better loan management, Central Bank sends to all the banks and financial institutions at the end of every quarter, the list of loans of RWF 500,000 and above classified as 3,4 and 5;
- 3. To exert pressure on bad debtors, Central Bank asked the banks through the Rwandan Banks Association to write to individual debtors with more than 90 days of outstanding debt so as to negotiate with them a satisfactory repayment schedule. Failure to comply with this requirement, banks and other financial institutions were asked to ban such debtors from receiving any credit, advance, overdraft, credit facility or credit line with or without guarantee; not to grant them commitments by signature, not to allow them to open a bank account and to carry out foreign exchange operations of any kind.

III.5.4 Payments System

Through the already launched process of modernizing the system of payments, the Bank made some achievements in 2003 financial year.

During the year, a study was carried out to evaluate the payments system. The study, carried out by the firm Horizon System, revealed that the payments system in Rwanda was characterized by a strong

¹ Data as at 31/12/2003 from banks and financial institutions not yet available

² According to data provided in monthly accounts statements.

³ Commitments provided through assets classification done by the banks

predominance of cash operations (80% of operations) and a relatively considerable volume of paper currency (about RWF 30 billion, against RWF 85 billion in deposits and term accounts).

This observation means generally that the payments system has not yet assimilated the current opportunities offered by information technology and telecommunications, both in the bank-enterprise relationship and in the behaviour of clients. In order to mitigate this loophole, the Interbank Company for Electronic Funds Transfer and Compensation (SIMTEL) which was established in 2002, drew up its operational programme in 2003 and accelerated preparatory activities so as to be able to launch payments operations by bankcards in 2004.

In the meantime, the same study made recommendations to Rwandan banks, exhorting them to use the already existing and poorly used techniques which could facilitate payments without having to resort to cash. Such is the case particularly with domiciliation which some big companies could use to redeem their invoices. Proposals were also made aiming at the development of a computerized netting system (simplified clearing) for low amounts operations (cheques and transfers), the introduction of credit cards, both their acceptance and their issue, and consideration of the possibility of establishing a joint company for the transport of securities.

During 2003 financial year, the Bank was also able to establish a database on the payments system through the collection of data on payments in the banks.

III.5.5 Micro-finance unit

The activities of the section responsible for the supervision of Savings and Credit Cooperatives (COOPEC) and micro-finance institutions (MFI) in the Department of Banking Supervision were launched in 2003. These activities consisted mainly of the following:

- 1. Establishment of a specific regulatory framework of COOPEC : finalization of directive No. 05/ 2003 on Savings and Credit Cooperatives;
- 2. Approval of COOPEC and MFI : only one institution was approved in 2003, but several applications were under consideration ;
- 3. The establishment of a monitoring framework for document-based inspection and on-site inspection.

1. Document-based Inspection

This inspection involved financial structure, quality of credit, profitability, risk management and management of a micro-finance institution. Since the same institution was implementing a 2001-2004 action plan, the Bank monitored the status of implementation and recommended to this institution to show the returns of its new products, monitor funds allocated to the refinancing of local banks, submit a progress report on the preparation of a recovery plan of banks finding themselves in a more critical financial situation.

2. On-site inspection

Field missions were carried out in two COOPEC that had not yet been approved to see how these institutions were organized and their progress in the preparation of applications for approval.

Chapter IV: Organization and Management of the Bank

IV.1 Statutory Organs of the Bank

IV.1.1 Board of Directors

During the year under review, there was a change in the composition of the Board of Directors: at its meeting of 12/11/2003, Cabinet appointed Mr. GATETE Claver board member, replacing Mr. MUSAFIRI Prosper. The Board held four ordinary meetings and one extraordinary meeting during which important decisions were taken, including the following:

1° 28th March :

- Adoption of the financial statements of National Bank of Rwanda for financial year 2002 and allocation of earnings
- Annual report of NBR for 2002;
- SIMTEL: Business Plan and Financing Plan.

2° 26th June:

- Directive on Savings and Credit Cooperatives ;
- Classification of jobs and reform of the salary scale for National Bank of Rwanda;
- Operational mechanism of the Agricultural Exports Diversification Support Fund.

3° 26th September :

- Consideration of the revised 2003 budget;
- Consideration of the document establishing Directives to follow in the management of foreign exchange reserves.
- 4° 9th October :
 - Classification of jobs and salary scale.
- 5° 18th December:
 - Bank's budget for 2004 financial year;
 - Review of the staff rules of NBR;
 - Review of some directives on Banking Supervision prudential framework;
 - Review of the directive on solvency ratio for banks and other financial institutions;
 - Review of the directive on the standards for risk diversification and cover;
 - Review of the directive on the classification of assets and monitoring of commitments of banks and other financial institutions;
 - Directive on the activities of the Discount House;
 - Project for the creation of regional branches of NBR;
 - Audit report of financial statements for 2001 and 2002;
 - Report of the Audit Committee.

IV.1.2 Audit Committee

The Audit Committee started its activities after the appointment of its members on 3/08/2001 and 16/ 05/2003. Mrs. MUKAKALISA Therese and Messrs TWAHIRWA Manasse and MPATSWE Gaston were appointed members of the Council. The first report of the Audit Committee was considered by the Board of Directors at its meeting of 18 December 2003.

IV.2 Human Resource Management

IV.2.1 Administrative Reforms

1. Classification of Jobs and Salary Scale

Within the framework of the administrative reforms introduced with the restructuring of the Bank in 2002, the Bank modified its method of human resource management by adopting the method of management by jobs. The Bank drew up an organizational structure defining entities, jobs, posts, their duties and requirements.

It also carried out job evaluation by determining specific criteria of job evaluation and classified them.

Table 78: Selected criteria and their weightings in job classification

CRITERIA	Weighting
Required knowledge and expertise	40
Responsibilities	25
Complexity (creativity, judgment and reasoning)	20
Autonomy	10
Communication	5
TOTAL	100

Source: NBR, Department of Human Resources

Job classification produced 15 grades distributed in 4 categories of employment: management, supervision, collaboration and implementation.

In the existing salary scale, diplomas and seniority earned more than the required expertise for a given job.

In this way, different salaries were paid depending on whether the employee had been with NBR for many years or whether he had acquired experience elsewhere which NBR considered relevant. Within the framework of the Arusha Accords, the Bank recognizes also and pays for years of experience of Rwandans having lived abroad and who were recruited since July 1994. This arrangement was applied until 1 August 1997.

From that date, the Bank adopted staff rules under which salaries were reviewed and fixed at a relatively high level but without taking into consideration years of experience served elsewhere.

This multiple-speed salary scale produced distortions in staff salaries. Thus salaries for two employees occupying the same post could vary up to two-fold. For example, a Director could earn less than many employees under his supervision.

All in all, it was observed that employees of the low category (gardeners, cleaners, drivers) and intermediate officers (secretaries, accountants, nurses, technicians) were paid better compared to their colleagues in the banking sector or public enterprises, while senior staff were less well paid.

In addition, because of lack of competitivity compared to the salaries of other public companies or institutions operating in the same or comparable sector as NBR, the existing salary scale did not give enough latitude for the recruitment of the required skills on the labour market, for example computer specialists, auditors, etc.

On the other hand, the reform of the salary scale that was introduced took into consideration the following three important aspects:

- 1) All subsidies and allowances formerly paid for housing, transport and possibly fines imposed on an employee were incorporated in a single salary per job.
- 2) The recruitment policy has been made easy because every job that is open for recruitment will have an identified salary taking into consideration the job profile expected by the Bank.
- 3) With the new salary scale, it will be possible to retain on one hand, qualified technical staff in the Bank's institutions in whom it has invested much through training and, on the other, attract the required expertise which used not to respond to employment offers because the old salary scale was not competitive.

During the 4th quarter of 2003, staff members were appointed to specific jobs.

Likewise, the Board of Directors reviewed the Staff Rules of the Bank during its ordinary meeting held on 18th December 2003.

A. Movements of Personnel and Training

The work force of the Bank was virtually stable, with only one change. The employees numbered 447 in 2002 and 448 in 2003. Seven new employees were recruited, including 3 computer specialists and 4 enforcement officers, while 6 left the employment of the Bank (resignation, desertion of the post, dismissals, etc.).

IV.2.2 Social Policy

1. Loan Policy

The Bank maintained its incentive policy for the staff by granting them loans for transport and housing or for settling isolated social problems.

In this regard, the Bank provided the staff with advances, loans for purchase of vehicles and purchase or construction of houses amounting to RWF 296,640,026, RWF 13,419,918 and RWF 150,705,662 respectively.

2. Medical Care

During 2002 financial year, the Bank continued to take care for the well-being of its employees and their dependents. They received the usual medical care, and the policy of treating HIV/AIDS patients with anti-retroviral drugs continued. Some employees and their dependents were sent abroad for specialized treatment.

During 2003, besides the daily operational activities of existing computer applications and assistance to other departments of the Bank, the Department of Organization and Information Systems took an active part in several projects, including:

- Job classification
- Development of the procedures manual
- Upgrading the computer network
- Training, equipment management and applications maintenance
- Development of new applications "Foreign exchange operations" and "Payments programming".

IV.3 Organization and Information Systems

IV. 3.1 Organization

1. Job Classification

National Bank of Rwanda, with the assistance of the project "Capacity Building and Public Service Reforms", carried out the analysis and evaluation of employment posts. This exercise led to the classification of its jobs and a new salary schedule.

These reforms aimed at taking into account the constraints and responsibilities of the personnel and pay them fairly with a view to increasing the efficacy and efficiency of the administrative units and the staff that run them.

The involvement of the Organization and Systems Information Department was predominant from the design to the implementation stage. An in-house application facilitated a great deal the simulation of several scenarios of salary schedules, based on the points allocated to each job.

2. Development of the Procedures Manual

National Bank of Rwanda is undergoing changes and its activities are growing. Its short term objective as defined by the Bank's management is to become a modern Central Bank, capable of fulfilling its various missions using the resources at its disposal. In order to meet this challenge, the Bank started the project of developing the procedures manual. Once finalized, this document will form the basis of efficiency in the execution of its activities. Some of the work carried out in 2003 was as follows:

- Training of about fifty employees in the techniques of procedure development;
- Establishment of a Steering Committee;
- Formation of teams responsible for drafting procedures;
- Identification of the Bank's procedures to develop;
- Development of 30 procedures by the working groups;
- Validation of 12 procedures by the Steering Committee and forwarding them to Management for approval.

The exercise of developing procedures which started in July 2003 will continue in 2004.

IV.3.2 Information and Communication Systems

1. Mise à Niveau du Réseau Informatique

The increased diversity in the use of information technology (sound, image, data) and the generalization of this communication channel at all the levels of the Bank call for a very solid network structure. It is for this reason that the project of upgrading the network was more than necessary. This involved replacing repeaters (hubs), which are more appropriate for small structures, with switches and putting in place computer security equipment called Firewall.

Putting in place such equipment enabled the Bank to improve in terms of security the quality and speed of data exchange in-house and on internet. This network will be used also as a support platform for the "General Security of the Bank" and "Interbank Data Exchange" projects.

Optimization of this network and the eradication of viruses and intrusions as well as protection against the latter is a constant exercise.

2. Training, Equipment Management and Applications Maintenance

A. Training

Among the priorities of the Office Automation section of the Organization and Information Systems Department is the training of the Bank's employees in information technology. At the moment, it trains employees and desk officers in modules such as WINDOWS, EXCEL, WORD, POWERPOINT, LOTUS NOTES and INTERNET. This section is responsible also for the management of the entire office automation environment and back-up.

B. Equipment Management

The next purchase of office automation management tools and computers will improve this exercise and, more particularly, assistance to the users and software upgrading.

C. Applications Maintenance

Applications maintenance is carried out within the framework of information technology projects. There are several projects grouped by banking fields and their Heads are raised to the level of project managers.

Database Administration Project

The "Database Administration Project" concerns all the departments and is the heart and brain of the Bank's information system.

The main and daily activity consists of ensuring total availability and security of databases.

Computer Equipment Maintenance Project

This project assists all the departments. It is involved in the activities of the communications equipment maintenance section (operations of inverters (UPS), telephone exchange, computer physical network, computers and peripherals).

- Other projects are:
 - Foreign exchange: exports, imports, invisible transactions
 - Payment to personnel and Human Resources
 - Accounts: general and subsidiary, budgetary, cost accounting
 - Management of credits and outstanding debts
 - Management of stocks and supplies
 - Management of movement of vehicles and fixed assets
 - Management of customers
 - Salary programming
 - Foreign exchange rates
 - Handling of medical issues
 - NBRNET (intranet/internet)
 - SWIFT

Activities in these projects are varied, but the most common are:

- Adapting programmes to users' needs
- Design and implementation of new modules
- Design and implementation of trend charts on the request of users
- Improvement of controls for data recording in databases
- Migration of archives data to the new operating environment UNIX/ORACLE

Other more ambitious projects were initiated in 2003 and will be carried on in 2004.

BANKNET: Interbank communication framework. The establishment of this system will enable the Bank to improve the quality and speed of exchange of data with its different partners.

OVERALL SECURITY: Management of accesses and fire detection.

IV.4 Audit of the Bank's Operations

IV.4.1 Internal Audit

The establishment of the Department of Internal Audit at National Bank of Rwanda came with the restructuring exercise in January 2003. This department, whose mission is to provide Management with reasonable assurance on the operations of the Bank, set for itself in 2003 the objective of carrying out the operational reorganization of the activities of internal audit at NBR, with the aim of moving from pure inspection to risk-based audit and implemented in accordance with the standards and good audit practices laid down by the Institute of Internal Auditors. This objective was translated into action by the establishment of an Internal Audit Statute approved by the Board of Directors, the identification of risks in the Bank's operations and the development of an internal audit plan for the year 2004.

Risk identification and the development of the audit plan for 2004 called for an in-house training of existing auditors in the concepts of internal audit and the method of identifying risks as well as the development of two procedures, namely internal audit plan development and general implementation of internal audit tasks.

Parallel to the activities of refocusing internal audit to risk-based audit, selected inspections continued to be carried out in high risk areas such as the Main Petty Cash Fund and external payments for the security of the Bank's property. In this regard, eight surprise inspection reports on petty cash and an investigation report on the execution of external payments orders were produced.

IV.4.2 External Audit

During 2003, two external audits were carried out at NBR. These were the audit of the Bank's accounts carried out by GRANT THORTON from August to October 2003 and the supervision mission of the Bank's operations carried out for the first time since 1994 by the "Censors' Council" from 20th October to 14th November 2003.

These two audits made relevant observations and recommendations on the management of the activities of the Bank, some of which have already been implemented, while others will be implemented in 2004.

IV. 5 Other Supplementary Activities

IV.5.1 Legal Affairs

During the year under review, the Legal Department of the Bank came on the scene several times by giving advice proposals on various legal issues. These advice proposals concerned mainly the difficulties in applying some legal provisions, certain draft statutory instruments and draft contracts as follows:

- Transfer modalities of the Housing Fund to the Rwandan Mortgage Fund (C.H.R.)
- Draft directive on the standards of risk diversification and cover
- Fraud and attempted fraud on some dormant accounts
- Interpretation of Article 111 of the General Statute of Rwandan Civil Service relating to the inherent advantages of being in an acting position
- Application for the release of FARG funds withheld on its account No. 120.26.75 operated at NBR
- Directive No. 04/2003 relating to the status of the information technology project manager at NBR
- Draft instructions relating to the establishment of a commission for the coordination of procedures for establishing the coat of arms of National Bank of Rwanda
- Draft "mandate to mortgage"
- Draft partial review of the Staff Rules of National Bank of Rwanda
- Draft Ministerial Order establishing the duration of the working week

It should be stressed that, as usual and for practical reasons, the Bank prepared for MINECOFIN as and when necessary, draft bills concerning the Bank itself or the activities it covers. This was the case with the draft bill on leasing which was adopted by the Government in July 2003.

With regard to monitoring the development of Rwandan laws, the Bank, through its Legal Department, completed its database on references of the main statutory instruments and regulations which are of some interest to NBR and had been published in the Official Gazette of the Republic of Rwanda since 1995. This Department thus possesses an updated directory which will be filled in along with the publication of new laws in the Official Gazette of the Republic.

Concerning disputes, the Legal Department handled the following issues:

- Pleading pending cases before the courts
- Preparing contentious cases and ensure the fulfillment of all processes during each legal proceeding
- Making legal opinion proposals on contentious issues
- Keeping and updating the list of cases pending before the courts

IV.5.2 General Services

1. Investments

During 2003 financial year, the Bank acquired capital equipment for different purposes at considerable cost. The following contracts were awarded through tendering:

- Computer equipment: RWF 70 million
- Furniture, furnishing articles and kitchen equipment for the canteen (M7): RWF 41.5 million
- APC inverter (UPS) dp 360E of 60 KVA: RWF 28 million
- Automatic sorter of banknotes De la Rue, Cobra 4004: RWF 147.716 million
- Three automatic tills for cash tellers: RWF 104.4 million

Still under the same investment framework, important contracts were signed and related procurements are in the course of implementation:

- Installation of a general security system: RWF 704 million
- Shredder of demonetized banknotes: RWF 99 million

2. Security and Maintenance

A. Security

With a view to resolving security problems inherent in access control, video-surveillance, anti-intrusion and fire detection, the Bank signed in September 2001 a contract for a study of the general security system with the Swiss company RM Risk Management A.G. based in Zurich, Switzerland.

From the study carried out, the Bank called for closed tenders to carry out the project (August 2002), and the contract was awarded to AFS Systems, a South African company based in Johannesburg. A contract was signed with this company in July 2003.

Since then, the system was satisfactorily tested in the presence of the Bank's delegation, and it is expected to be installed during the first quarter of 2004.

B. Maintenance

_

B.1 Machinery and Equipment

During the year under review, maintenance contracts were signed for:

- An automatic sorter of banknotes
- Three automatic tills for the distribution of banknotes installed at three counters of the Bank
- A banknotes shredder

B.2 Rehabilitation/Transformation of the Welfare Building

In October 2002, a Rwanda-Kenyan Consortium composed of ATLANTIS Consult (RW) and Dimension Architects & Interior Designers (Kenya) engineering firms were contracted to study this project following an international competitive bidding.

After considering the design submitted by the said Consortium, the Bank's Management felt that the overall project (composed of the rehabilitation of waterproofing, the extension of buildings on terraces, the reorganization of the interior and air conditioning), the cost of which was estimated at RWF 3 billion, was too costly and requested that it should be reviewed downward (at around RWF 1 billion).

The revised project is expected by end January 2004. It will be presented to the Board of Directors in March 2004, and the Board will decide whether to go ahead with the project as it is, or rehabilitate waterproofing of the old building, with the construction of a new one for the extension of offices.

Chapter V: Financial Statements for the Financial Year 2003

V.1 Balance Sheet

Total balance sheet for 2003 amounted to RWF 244,195 million against 228,473 million in 2002, an increase of RWF 15,722 million in absolute terms or 7% in relative terms. The budget items on the side of assets which registered substantial increases were the subscription to the capital of IMF and fixed assets.

Table 80: Balance sheet as at 31st December 2003 (in RWF)

Accounts	2003	2002
ASSETS		
Petty cash	606,579,292	116,332,483
Foreign claims	123,720,101,248	124,493,768,280

TOTAL EQUITY CAPITAL	16,602,453,481	12,911,249,088
TOTAL LIABILITIES AND EQUITY CAPITAL	244,195,419,064	228,473,172,385

Source: Accounts and Budget Department

On the liability side, the most significant increases were recorded under Liabilities to the International Monetary Fund and Currency in Circulation.

The increase in the total balance sheet was thus practically due to the rise in the exchange rate which mainly put Rwanda's subscription to the IMF capital on the assets side and commitments to IMF on the liabilities side. The 2003 financial year was characterized by a significant increase of currency in circulation, coupled with a sharp reduction of foreign exchange assets and a reduction of Government deposits.

V.1.1 Assets Accounts

In the order of importance, foreign claims took the lead with 50.7% of total assets, followed by subscription to IMF capital and claims on Government and related items respectively. These two last items represented 28% and 18% of total assets respectively.

Items	Fina	Financial years			Chang	ges
	2003		2002		Absolues	En %
	Amount	%	Amount	%		
1. Petty cash	606,579	0.2	116,332	0.1	490,247	421
2. Foreign claims	123,720,101	50.7	124,493,768	54.5	-773,667	-0.6

Table 81: Comparison between assets accounts for 2002 and 2003 financial years (in thousands of RWF)

Source : Accounts and Budget Department

1. Petty cash fund: RWF 606.5 million

This item records foreign exchange assets in the form of banknotes. It increased from RWF 116 million by end 2002 to 606.5 million as at 31. 12. 2003, a change of RWF 409.5 million in absolute value, and a net increase of 421%.

This increase was due to a supply of one million American dollars in banknotes. Dollar assets represented the biggest share of the foreign currency holdings because this hard currency is usually on a higher demand than others.

2. Foreign claims: RWF 123,720 million

Foreign claims decreased from RWF 124,494 million by end 2002 to 123,720 million as at 31.12.2003, representing a decrease of RWF 774 million in absolute value and 0.6% in relative value.

This decrease was due to the following factors:

1. Total foreign currency receipts decreased from 228.45 million US\$ in 2002 to 206.71 million US\$ as at 31/12/2003, representing a reduction of 10%. Among these receipts, foreign disbursements as assistance to Government budget fell from 108.25 million US\$ at the end of 2002 to 76.34 million US\$ as at 31/12/2003, a reduction of 29.5%.

2. In addition, foreign currency expenses in 2003 were higher than in 2002, amounting to 245.06 million US\$ against 197.09 million US\$, an increase of 24.6%. Government expenditure at the end of 2002 amounted to 49.27 million US\$ and rose to 58.60 million US\$ at the end of 2003, representing a net increase of 18.9%.

The general level of foreign assets during the whole of 2003 was higher than that of 2002, thanks to a disbursement of 46 million US\$ made on 31 December 2002 and which, in reality, was used during 2003 financial year. Nevertheless, as already mentioned, total foreign currency receipts in 2003 were less by 10% against those for 2002.

3. Subscription to the International Monetary Fund: RWF 68,010 million

This budget line increased from RWF 55,165 million by end 2002 to 68,010 million by end 2003, representing an increase of RWF 12,845 million or a net growth of 23.28%. This increase was solely due to the changes in exchange rates since their exchange-value in foreign currency at 80.1 million SDR did not change.

4. Claims on Government and related items: RWF 43,917 million

Claims on the Government of Rwanda increased by RWF 866 million, representing a net rise of 2% in relative terms.

The consolidated debt reduced by RWF 484 million after the repayment carried out at end March 2003 during the allocation of net profits from 2002 financial year.

The overdraft of RWF 138 million granted to National Social Security Fund (Caisse Sociale du Rwanda) before the closing of 2002 financial year was paid back beginning January 2004.

It should be pointed out that even if the overdraft granted to the Government Accounting Officer (OTR) stood at an acceptable level of RWF 1,489 million by end 2003, it had at times reached considerable levels, especially between July and October when the highest level reached was RWF 9.8 billion.

On the other hand, Government borrowing from the private sector increased such that Treasury Bills issued increased from RWF 10,879 million by end 2002 to 16,054 million as at 31/12/2003.

5. Claims on banks and other local financial institutions: RWF 1,569 million

This item reduced from RWF 2,486 million by end 2002 to 1,569 million by end 2003, representing repayments of RWF 917 million in absolute terms or 36.9% in relative terms.

The balance consisted mainly of outstanding loans to the banks from IDA line of credit No. 2541 for an amount of RWF 575 million, IDA line No. 3270 for RWF 238 million, loan on housing financing of RWF 533 million, and from the Preferential Refinancing Facility on long term loans for agricultural and agro-industrial exports amounting to RWF 78 million. The latter line of credit was financed from NBR equity capital.

6. Stocks of consumables: RWF 117 million

Compared to end 2002, the level of the stocks of consumables remained virtually unchanged.

7. Other claims: RWF 2,960 million

Compared to end 2002, this item rose by RWF 633 million, a net increase of 27.2%. These increases were observed mainly in loan accounts to employees and equalization accounts.

Loans to employees increased by RWF 285 million as a result of new loans for house construction; assets regularization accounts increased by RWF 363 million following the sale of foreign currency to authorized banks carried out on the eve of 31 December the exchange value of which in RWF was entered on the RWF account receivable for transfer of foreign exchange, pending the date of the delivery of securities.

The item " Other claims " reduced by RWF 70 million due to the repayment of the same amount by the authority responsible for the liquidation of the Rwandan Savings Bank.

8. Other fixed assets: RWF 2,036 million

This item recorded a sharp increase. Its balance rose from RWF 159 million by end 2002 to RWF 2,036 million by end 2003, mainly as a result of the purchase of new RWF 100 banknotes and coins for a total amount of RWF 2,032 million.

9. Tangible assets: RWF 1,060 million

This item recorded an increase of RWF 545 million compared to end 2002. This increase was mainly due to the purchase of a building for SIMTEL for RWF 100 million, the transformation and extension of house M7 which became a NBR canteen for RWF 73 million, the purchase of an automatic sorter of banknotes and machines for shredding banknotes for RWF 252 million, computer equipment for RWF 77 million, equipment and furniture for RWF 95 million, and an advance payment on fixed assets order of RWF 173 million the big part of which was for NBR general security system.

10. Equity securities: RWF 200 million

Equity securities increased by RWF 160 million in 2003. This consisted of an additional subscription of RWF 160 million to the capital of SIMTEL which rose from RWF 100 million as at 31 December 2002 to 600 million at the end of 2003, and NBR continues to be the major shareholder with equity of RWF 200 million.

V.1.2 Liabilities Accounts

The balance of liabilities increased from RWF 215,562 million by end 2002 to RWF 227,593 million by end 2003, representing an increase of 5.6%. The major items which registered an increase were liabilities to the International Monetary Fund, currency in circulation and other credits. Government deposits and other foreign commitments were on the decrease. Commitments to the International Monetary Fund were in the lead with a share of 58.1% of total liabilities against 49.9% in 2002. Currency in circulation came second and Government deposits third, representing 16% and 14.7% of total liabilities respectively.

By end 2002, Government deposits took the second position with 23.6% coming after commitments to IMF, and currency in circulation came third with 14.3%.

Financial years				Change	Changes	
	2003		2002		Absolute	in %
Items	Amount	%	Amount	%		
1. Currency in circulation	36,467,123	16	30,719,417	14.3	5,747,706	18.7
2. Govt. deposits & related items	33,460,315	14.7	50,964,390	23.6	-17,504,075	-34.3
3. Banks & local OFI	12,009,092	5.3	12,097,264	5.6	-88,172	0.7
4. Commitments to IMF	132,159,524	58.1	107,619,024	49.9	24,540,500	22.8
5. Other foreign commitments	6,211,667	2.7	9,105,797	4.2	-2,894,130	-31.8
6. Other credits	7,285,245	3.2	5,056,031	2.4	2,229,214	44

Table 82: Comparison of liabilities accounts for 2002-2003 financial years (in thousands of RWF)

Source: NBR, Accounts and Budget Department

1. Currency in circulation: RWF 36,467 million

Compared to end 2002, currency in circulation as at 31 December 2003 had increased by RWF 5,478 million, representing a net rise of 18.7%. This increase was the result of the sharp reduction of Government deposits and the increase of overdrafts it received during the third quarter of the year.

The increase in currency in circulation could have reached higher proportions had NBR not increased its sales of foreign currency to commercial banks to defend the exchange rate of RWF to the detriment of currency in circulation which recorded a reduction.

2. Government deposits and related items: RWF 33,460 million

Government deposits registered a sharp decrease of RWF 17,504 million, a reduction of 34.8%. This reduction was mainly the result of the decrease of the Government Treasurer's account by RWF 4.8 billion, the reduction of Government foreign currency deposits by RWF 6.2 billion and the reduction of Government institutions deposits by RWF 0.6 billion.

Poor foreign currency disbursements especially under assistance to the Government budget was the cause of the sharp use of Government deposits, particularly 26 million US\$ disbursed at the end of December 2002 by IDA in favour of Institution Reform Credit account, this amount being credited later to the Treasury account.

3. Banks and other financial institutions: RWF 12,009 million

A comparison of bank deposits by end December 2003 and end December 2002 shows that these deposits were stable.

In reality, banks reserves were very high in 2003 to such an extent that NBR had to take measures to keep a check on them every day in order to prevent them from going out of control in relation to the monetary programme agreed with the International Monetary Fund. In this regard, NBR had to make constant use of the mopping up and Treasury Bills issue mechanisms for purposes of both Government

budget deficit and monetary policy, in order to stabilize bank liquidity and contain it within the programme agreed with IMF.

Naturally, the cost of this intervention policy of draining off excess liquidity affected greatly the operating account of the Bank.

By end 2003, Treasury Bills subscribed by commercial banks amounted to RWF 10,075 million in total, against RWF 8,500 million in 2002.

4. Liabilities to the International Monetary Fund: RWF 132,159 million

By end 2003, these liabilities were composed of:

- IMF account No. 1 corresponds to Rwanda's subscription to IMF capital. It is the counterpart
 of IMF share account in RWF which is entered under assets in the balance sheet for an
 amount of RWF 68 billion. These two accounts are not interest bearing.
- Structural loan accounts (FASR and PRGF) with a total of RWF 53 billion. Their repayment started during the financial year under review, and the Bank paid a half-yearly commission of 0.5%. The amount reimbursed in December 2003 on FASR was equal to 611,250 SDR, being the first installment of the refund.
- SDR allocation account with a total amount of RWF 12 billion on which NBR pays quarterly interests, based on the interest rate of cash loans granted by IMF. This amount is a long term resource because as long as Rwanda remains member of IMF, it is not payable.

Commitments to IMF represented 58.1% of total liabilities and registered a net increase of 22.8% due to the rise of the exchange rate of SDR, though their total in foreign currency did not virtually change.

5. Foreign liabilities: RWF 6,212 million

Foreign liabilities decreased by RWF 2,893 million, or 31.8%. This decrease was primarily due to the decision taken during the financial year to reduce the overdraft at National Bank of Belgium which costs 3% per year, while term investments in Euro yield at a lower rate. This overdraft was reduced from 15.1 million to 7.5 million Euros by end December 2003.

6. Other credits: RWF 7,285 million

Compared to 2002, this item registered an increase of RWF 2,229 million, or 44% in relative terms. The big proportion of this increase amounting to RWF 1,894 million came from the increase of payment orders to be settled, the balance of which increased from RWF 1,540 million by end 2002 to RWF 3,454 million by end 2003.

Non statutory accounts which for the most part relate to dormant accounts transferred to NBR by commercial banks remained stable. Suspense and equalization accounts at the end of the financial year registered an increase of RWF 389 million due to unpaid suppliers, business taxes and unsettled quarterly contributions to National Social Security Fund, as well as equalization accounts which were on the increase by end of the financial year.

V.1.3 Equity Capital Accounts

Total equity capital increased from RWF 12,911 million by end 2002 to 16,602 million by end 2003, representing a rise of 28.6%. As shown in the Table on equity capital changes, this increase was due to the allocation of net income of 2002 financial year and the profits earned in 2003

The General Reserve Fund rose RWF from 5,553 million by end 2002 to 6,084 million by end 2003, an increase of RWF 531 million, due to the allocation of profits from 2002 financial year. Other reserves increased from RWF 2,703 million to 3,055 million as a result of the allocation of profits from 2002 amounting to RWF 498 million, the constitution of provisions at the end of the fiscal year for an amount of RWF 47 million, and the use of the provision for the printing of banknotes amounting to RWF 193 million.

	Financial years				Chang	Changes	
	2003		2002		Absolute	in %	
Items	Amount	%	Amount	%			
1. Share capital	2,000,000	12.0	2,000,000	15.5	-	-	
2. General Reserve Fund	6,084,249	36.7	5,553,313	43.0	530,936	9.6	
3. Profits to be distributed	5,462,923	32.9	2,654,682	20.6	2,808,241	105.8	
4. Other reserves	3,055,281	18.4	2,703,254	20.9	352,027	13.0	
TOTAL EQUITY CAPITAL	16,602,453	100,0	12,911,249	100,0	3,691,204	28.6	

 Table 83:
 Comparison of equity capital for 2002 and 2003 fiscal years (in millions of RWF)

Source : Accounts and Budget Department

Thus, in addition to the net profit for 2003 financial year which, compared to 2002, registered an increase of 105.8%, the allocation of profits for 2002 contributed to the rise of equity capital by about 8%.

Source: Accounts & Budget Department

As mentioned earlier, working conditions for the 2003 fiscal year were difficult compared to previous years.

In fact, while the bulk of the Bank's income came from foreign assets investments, it was observed that for 3 years, interest rates applied on international markets had remained very low and continued on the downward trend when it was practically impossible to cut operating costs.

Despite the efforts made with a view to diversifying foreign assets investments, net interests on the whole fell to RWF 2,580 million from 2,637 million by end 2002. The Bank was forced to strengthen the utilization of income from arbitrage in order to compensate this shortfall. This was done successfully because net income from banking operations increased by 25.4% and operating income by 39.5%.

On its part, income from daily fluctuations of exchange rates increased from RWF 1,392 to 3,960 million between 2002 and 2003, representing a net rise of 184.5%.

Thanks to these different increases, net income for the year under review rose to RWF 5,463 million from 2,655 million by end 2002. This was the first time that the Bank posted such a significant income since 1995.

V.2 Operational Accounts

V.2.1 Income

Total income for 2003 financial year was RWF 11,011 million against 7,352 million in 2002, representing an increase of 49.8%. Income from banking operations amounted to RWF 7,051 million compared to 5,960 million by end 2002, an increase of 18.3%, and it contributed to the formation of net income for the year at 64%, while this was 81% by end 2002.

	Financial years				Changes	
	2003		2002		Absolute	in %
Income	Amount	%	Amount	%		
1. Banking operations	3,718,431	33.8	3,585,166	48.8	133,265	3.7
2. Foreign currency operations	2,303,669	20.9	1,556,248	21.2	747,421	48.0
3. Administrative income	181,958	1.6	115,107	1.5	66,851	58.0
4. Exceptional income for the year	472,904	4.3	440,862	6	32,042	7.3
5. Miscellaneous income	374,677	3.4	262,502	3.6	112,175	42.7
6. Income on exch, rate fluctuations	3,959,548	36	1,391,743	18.9	2,567,805	184.5

Table 85: Comparison of income for 2003 and 2002 financial years (in thousands of RWF)

Source: Accounts & Budget Department

1. Income from Banking Operations

Income from banking operations are those that pay for the banking intermediation exercise, including interests and commissions on transactions in RWF and foreign currencies.

Interests on loans in RWF remained stable and amounted to RWF 1,236 million against 1,250 million by end 2002. They consisted of interest on loans to Government to the tune of RWF 1,174 million, interest on loans to the banks of RWF 25 million and interest on loans to personnel amounting to RWF 37 million.

Income on foreign assets increased by RWF 61 million and was distributed as follows:

Table 86: Distribution of income on foreign assets (in millions of RWF)

	2003	2002
Interest on call money in foreign currencies	617	550
Interest on fixed term investments	965	1,390
Income on funds invested with specialized institutions	720	301
Total	2,302	2,241

Source : Accounts & Budget Department

This moderate increase was due to the general drop of interest rates on international capital markets. Most of the foreign correspondents no longer pay for sight assets, and the observed increase of interest on call money in foreign currencies came from sight assets in SDR held at IMF, which were reviewed upward to the detriment of the SDR account of NBR operated at la Belgolaise. In fact, NBR preferred to concentrate all its SDR assets at IMF because la Belgolaise posed a high risk and IMF offered a relatively higher interest rate.

Interests on fixed term investments posted a sharp decrease while interests on funds invested with specialized institutions were increasing. This decrease was due to the fall of interest rates for term investments and the reduction of the volume of term investments in favour of funds invested with specialized institutions.

Commissions on services decreased considerably compared to 2002. In fact, during 2003 fiscal year, the Bank did not have as many opportunities to open documentary letters of credit as in 2002, and this reduced the volume of earned commissions.

Concerning purchase and sale transactions of foreign currency securities carried out in order to diversify the portfolio and increase risk cover, the operations carried out by the Management of CAAMIL Fund produced a profit of RWF 57 million in 2003, against a loss of RWF 78 million in 2002.

2. Income from exchange operations: RWF 2,304 million

Revenues from exchange operations contributed sharply to the improvement of the operating result for the year under review and compensated the loss of income incurred on fixed term investments operations. In fact, compared to 2002, these products increased by RWF 748 million, representing a net rise of 48%. Profits on arbitrage of foreign currencies increased from RWF 972 million by end 2002 to RWF 1,527 million by end 2003, and profits from exchange operations increased by RWF 192 million since they rose from RWF 585 million by end 2002 to 777 million by end 2003.

3. Administrative income: RWF 182 million

Compared to end 2002, administrative income in 2003 registered an increase of RWF 67 million, representing a considerable rise of 58.5%, mainly from fines collected from the foreign exchange market.

4. Miscellaneous incomes: RWF 472 million

The increase of products relating to previous fiscal years was due to equalization entries of the old credit hold. The reduction of income from the transfer of fixed assets was a result of the fall in the number of houses to sell. The reduction of income generated by various recoveries was due to the reduced number of auction sales of used items.

Table 87: Distribution of miscellaneous incomes (in RWF)

	2003	2002
Recoveries and other similar incomes	10,581,085	37,255,800
Incomes relating to previous fiscal years	290,127,749	94,476,561
Income on transfer of fixed assets	172,194,814	309,129,115
Total	472,903,648	440,861,476

Source : Accounts & Budget Department

5. Exceptional income of the financial year: RWF 375 million

Compared to end 2002, exceptional income rose by RWF 112 million. This increase was a result of the repayment by the authority responsible for the liquidation of Rwanda Savings Bank RWF of the already serviced debt of 70 million, the renewal of provisions for the printing of banknotes amounting to RWF

193 million and other provisions constituted earlier amounting to RWF 13 million and receipts from renting some houses of NBR.

6. Income from exchange rate fluctuations: RWF 3,960 million

Compared to 2002, this item registered a sharp increase of RWF 2,568 million in absolute terms equivalent to 184.50% in relative terms. This increase was a result of the following two factors:

- 1. The Rwandan franc registered a continuous depreciation for the whole of 2003 against hard currencies as shown in the table below ;
- 2. NBR's foreign exchange net position is structurally positive, which means that its foreign exchange assets are always more than its foreign currency liabilities.

The combination of the above two factors led to this increase of income over the daily exchange rate fluctuations since the income is equal to the net foreign exchange position which is positive, multiplied by the depreciation of the exchange rate.

Table 88: Average exchange rate of RWF to hard currencies in 2003

Foreign currency	3 January	2 July	31 December
USD	511.96	533.84	580.28

GBP	822.97	885.10	1.030.52

Source: Department of International Operations

V.2.2 Operating Charges

Total charges for the year stood at RWF 5,548 million against 4,697 million in 2002, representing an increase of 18.1%. Administrative expenses continued to occupy the first place with a share equal to 54.2% against 54.8 by end 2002. Depreciation expenses registered a sharp increase as a result of the purchase of new banknotes of RWF 100 and coins, as well as various purchases of other tangible fixed assets.

		Years			Char	nges
	2003		2002		Absolute	in %

Table 89: Comparison of charges for 2002 and 2003 financial years (in thousands of RWF)

Source: Accounts and Budget Department

1. Bank Charges: RWF 1,187 million

Compared to end 2002, bank charges on the whole posted a slight decrease of 25 million RWF. Apparently, this decrease was the result of the reduction of charges relating to the purchase of banknotes from RWF 205 million by end 2002 to 61 million by end 2003. The latter charges relate to an order for old RWF 100 notes which had been placed in 2002, the delivery of which took place in 2003.

Other items of this heading registered a slight increase. Interests on domestic loans increased from RWF 208 million by end 2002 to 280 million by end 2003. Interests on foreign loans amounted to RWF 638 million by end 2002 and to RWF 662 million by end 2003. Interests on NBR overdrafts also fell from RWF 245 million to 230 million by end 2003, as a result of the reduction of its balance since end July 2003. The positive effect of the reduction of this overdraft was cancelled by the rise of the Euro exchange rate. Interests on SDR allowances dropped slightly from RWF 181 million by end 2002 to 175 million as at 31.12.2003, due to the reduction of interest rates on international capital markets.

Like in the preceding case, the effects of this drop were not significant because of the rise of the SDR exchange rate. Interests on structural loans granted by IMF increased from RWF 202 million by end 2002 to 251 million as at 31.12.2003 as a result of the rise of the SDR exchange rate.

Commissions paid on foreign currency operations rose by RWF 9 million due to the increase of the fees payable to Crown Agency for the management of the CAAML Fund. Losses on exchange operations rose from RWF 87 million by end 2002 to 102 million in 2003, representing an increase of 17.2%. These losses related to the costs of intervention on the local exchange market and losses on foreign exchange arbitrage.

By end 2003, losses on arbitrage amounted to RWF 58 million in total against 29 million in 2002, as a result of an operation of converting US\$ in SDR with a view to reducing the short position on SDR, while the costs of intervention on the local exchange market amounted to RWF 44 million against 58 million by end 2002.

Other bank charges concerned fees for the purchase of old RWF 100 banknotes the stock of which was exhausted before the procedures of ordering new notes were finalized. These charges were moreover recovered by using provisions for the printing of banknotes which had been earmarked previously.

2. Administrative Charges: RWF 3,005 million

Compared to end 2002, administrative charges increased in general by 16.6%. Wage cost rose from RWF 2,073 million by end 2002 to RWF 2,589 million by end 2003, an increase of 24.9%. Payments for external services however fell from RWF 92 million to 45 million, a decrease of 51%. Travel and training costs dropped from RWF 228 million by end 2002 to 150 million as at 31.12.2003, representing a reduction of 34%. Other social charges (medical charges, life insurance, etc) increased from RWF 183 million to 228 million by end 2003, a rise of 24.6%, due mainly to medical charges which rose from RWF 143 million to 176 million over this period.

3. Other Operating Charges: RWF 684 million

Compared to 2002, other operating expenses increased by 16.1%. Some items registered an upward trend while others posted a downward trend in the light of the needs expressed by the Departments. As a result of the depreciation of the Rwandan franc, this increase is generally considered acceptable.

4. Allowances on Provision Accounts: RWF 96 million

While there were virtually no provisions in 2002, charges on provisions amounted to RWF 96 million in 2003. For the most part, they related to the depreciation of stocks of consumables and on-going contentious cases.

5. Allowances on depreciation of other fixed assets: RWF 313 million

By end 2002, allowances on depreciation increased from RWF 84 million to 313 million as at 31.12.2002, representing an increase of RWF 229 million. This increase is due to the write-off of printing costs of new RWF 100 banknotes and minting of coins received during 2003.

6. Allowances on depreciation accounts of tangible fixed assets: RWF 241 million

Compared to 2002, these allowances increased by RWF 22 million. Some of them however decreased (buildings, vehicles, etc) and others increased (printing of banknotes) as a result of purchases made during the year under review and preceding financial years.

7. Exceptional charges: RWF 22 million

As the title shows, these charges are occasional and come about unpredictably. Compared to 2002, they registered a rise of RWF 13 million, representing a significant change of 141.1%.

V.2.3 Income Statement

1. Operating Income

The operating income for 2003 amounted to RWF 5,464 million against 2,655 million by end 2002, representing an increase of 105.8%. The bulk of this income is attributable to the fluctuation of the exchange rates. However, even when the latter is excluded, the operating income still shows an increase.

This performance therefore needs to be appreciated considering the prevailing working conditions which were made difficult by the unfavourable international environment. NBR increased arbitrage operations and diversified its foreign exchange investments, a policy which enabled it to meet the very high cost of acquired investments.

2. Change in Equity Capital

As mentioned earlier, by end 2003, equity capital rose to RWF 16,602 million against 12,911 million by end 2002, an increase of RWF 3,691 million or 28.6% in relative terms. This increase was due to the big volume of 2002 profits kept in equity capital during the allocation of benefits for the year and to net profits for 2003 which were relatively very high.

In fact, during the allocation of income for 2002 financial year, an amount equal to RWF 1,029 million was allocated to the reserve fund, and profits for 2003 amounted to RWF 5,463 million against 2,655 million in 2002.

V.2.4 Cash Flow

Cash flow at the end of 2003 registered a decrease of RWF 283 million compared to the level registered by end 2002. In fact, it amounted to RWF 124,610 million by end 2002 and to RWF 124,326 million by end 2003, a drop of 0.22%. This decrease was due to the fact that cash generated by the operations proper in 2003 was negative.

Cash flow generated by operations before the change of the working capital was positive and amounted to RWF 5,713 million against 2,443 million by end 2002, representing an increase of 134%.

Cash flow from the working capital was negative and amounted to RWF 1,395 million, a drop of RWF 28,368 million due to the sharp reduction of Government deposits the level of which depends for the most part on disbursements of external funds.

On the other hand, this deep cash flow deficit was the cause of the big volume of currency issues. As a result of the decrease of cash flow from the working capital, operating cash flow reduced to RWF 4,319 million from 29,415 million by end 2002. Cash flow relating to investment operations was also negative due to considerable purchases of machinery and banknotes and coins during the year. Compared to 2002, it declined by RWF 2,940 million.

One could summarize this situation by saying that the Bank's cash flow declined as a result of the reduction of foreign aid and big purchases of fixed assets. On the other hand, the net position of foreign exchange fell by RWF 9,084 million due to a sharp use of foreign assets.

V.3 Off-balance Sheet Accounts

Total off-balance sheet accounts amounted to RWF 112,345 million against 119,139 million as at end 2002, representing a decrease of 5.7%.

This decrease can be explained by the following factors:

- Greenhouse management accounts amounted to RWF 54,693 million down from 65,799 million, representing a decrease of RWF 11,106 million despite recent deliveries of banknotes of RWF 100 and coins. This decrease resulted from the destruction exercise of old banknotes carried out during the year.
- Goods on consignment totaled RWF 232 million as at 31.12.2003 against 430 million by end 2002. They comprised American Express traveller's cheques deposited in consignment at NBR.
- The public debt ledger registered RWF 43,597 million against 39,385 million by end 2002, representing an increase of 10.7%. The new domestic public debt consisted mainly of Treasury Bills and amounted to RWF 16,054 million against 10,879 million by end 2002, an increase of 47.6%.
- The old domestic public debt amounted therefore to RWF 27,543 million.
- Aid from the Chinese Government to the Government of Rwanda amounted to RWF 13,811 million against 13,093 million by end 2002.

It is worth recalling that off-balance sheet accounts of NBR do not contain any potential commitments that could involve a loss or profit to the Bank. They are included in the account statements of NBR for historical reasons or in order to monitor certain securities, but they do not constitute off-balance sheet commitments in the true sense of the word.

On the other hand, they will no longer be officially published pursuant to the opinion of the external auditors and Inter Control Company, authors of the new chart of accounts of the Bank. They will be published in the explanatory notes of financial statements as an indication only.

V.4 Allocation of Profits

Profits for the year under review amounted to RWF 5,462,923,075. At its meeting held on 28 March 2003, the Board of Directors of NBR decided that all the proceeds from exchange rate fluctuations should be allocated to the Exchange Rate Fluctuations Reserve Account.

If these proceeds are deducted from the net profit of the year, the balance to be allocated amounts to RWF 1,503,375,494. In accordance with Article 65 of law No. 11/97 of 26 July 1997 establishing the Statute of NBR, a proportion equal to 20% of this amount is to be carried forward to the General Reserve Fund.

Likewise, at its meeting held on 30.04.2002, Cabinet fixed the emoluments of the members of the Board of Directors of NBR at 1% of net profits of the year, excluding the proceeds on exchange rate fluctuations. For 2003, these emoluments amounted to RWF 15,033,755.

It is proposed that 15% of the remaining part of these profits after allocation to the General Reserve Fund be entered into the Social Fund account as usual. It should be pointed out that the proceeds earned from the sale of NBR houses amounted to RWF 150,447,943, a sum that is lower than the 15% of the rest of the profits after allocation to the General Reserve Fund.

After the constitution of these reserves, the remaining part amounting to RWF 1,007,261,581 was paid into the Government Treasury account. But of this amount, as usual and pursuant to Article 5 of the Convention No. 1/96 relating to the consolidation of the amounts of the special and exceptional consolidated advances granted to the Rwandan Government by NBR, NBR retained an amount equivalent to 30%, or RWF 302,178,474, as the annual repayment of the consolidated debt. The amount paid into the Government Treasury account amounted thus to RWF 705,083,107.

NOTES

1. SIGNIFICANT ACCOUNTING PRINCIPLES

a) Preparation base

The financial statements were prepared on the basis of the principle of historical cost.

b) Recording of incomes and expenses

Income and expenditure are recorded during the period in which they are produced.

c) Tangible and intangible assets

Tangible assets are included in the balance sheet at their net value, i.e. at their purchase costs less total depreciation. Depreciation levels are determined on linear basis. Depreciation rates are determined by the Board of Directors of NBR.

The depreciation rates currently applied for each category of fixed assets are as follows:

Buildings	5-10%
Computer equipment	25 %
Machinery	20 %
Rolling stock	33,3 %
Furnishing articles	20 %
Equipment and furniture	10 %

Other fixed assets are depreciated at the following rates:

Cost of printing banknotes	20 %
Cost of minting coins	20 %
Computer software	25 %
Major repairs	33,3 %

d) Stocks of consumables

Stocks of consumables are assessed on the basis of their weighted average cost. Provisions are constituted for all depreciations and obsolescence of this kind of stocks.

e) Foreign currency transactions

Foreign currency transactions are recorded in RWF on the basis of the average exchange rate ruling on the day they are carried out. The exchange value in RWF of foreign currency assets and liabilities are adjusted daily in the light of the changes in the exchange rates. Negative and positive differences produced by these exchange rate fluctuations are directly entered in a profit and loss account.

Elements of assets and liabilities expressed in foreign currency and appearing in the closing balance sheet are therefore converted into Rwandan francs on the basis of the average exchange rate ruling on the closing day.

f) Pension fund

In conformity with the social security laws in Rwanda, NBR pays contributions to Rwanda National Social Security Fund for its employees. These contributions represent 8% of gross salaries; 3% being contributed by the employees and 5% by the employer. The share of NBR is directly charged at the time of the recording of monthly salaries. NBR has also taken out protection

insurance for its employees with a local insurance company. Employees contribute one third to this insurance while the remaining two-thirds are directly paid by the employer.

g) Bad debts

Specific provisions for bad debts of former employees are constituted every time these employees stop repayments. Provisions for other debts are constituted when the Bank considers them unrecoverable. The Bank complies with directive No. 03/2000 of 29.03.2000 relating to the classification of assets and follow up of commitments by banks and other financial institutions.

h) Costs of printing banknotes

Starting from 2003, the cost of printing banknotes and minting coins will be spread over a period of 5 financial years. This decision was taken considering the amount of the costs for replacing banknotes and coins to be demonetized.

i) Cash flow

NBR's cash flow consists of cash holding in foreign currency and its foreign exchange claims.

j) Taxes

Pursuant to Article 71 of the law establishing the Statute of National Bank of Rwanda, the Bank is exempted from tax on profits in the exercise of its statutory missions. Thus after transferring an amount equal to 20% of its net profits to the General Reserve Fund and constituting all the provisions it considers necessary, the rest of the net profits is paid into the Government Treasury account.

k) Financial statements are prepared on the basis of RWF units.

		2003	2002
2.	FOREIGN CLAIMS		
	Assets in US\$	17,009,324,065	5,153,751,739

	Other foreign exchange investments	23,484,207,191	14,570,496,729
	Sight assets	36,074,968,160	39,135,527,699
	Other foreign exchange assets	4,292,982,696	6,202,504,034
		123,720,101,248	124,493,768,280

3. SUBSCRIPTION TO THE INTERNATIONAL MONETARY FUND

The subscription to the International Monetary Fund represents the capital of the Government of Rwanda as a member of IMF. It is equal to 80,100,000 SDR and was valued in RWF on the basis of the average SDR exchange rate ruling as at 31 December 2003.

4. CLAIMS ON GOVERNMENT AND RELATED ITEMS
Government consolidated debt42,427,901,97042,911,850,893Overdraft on Gvt. Treasurer's account (OTR)1,488,861,842138,541,376Public enterprises-138,541,37643,916,763,81243,050,392,269

On 7 February 1996, NBR signed an agreement with the Government with a view to consolidating all the advance accounts granted to it up to end 1994 and consolidate this debt at an interest rate of 2% per year. These accounts amounted to RWF 34,458 million. As at 31 August 1997, pursuant to Article 79 of the law No. 11/97 establishing the Statute of NBR, the balance of this consolidated debt account was increased to RWF 43,439 million by the incorporation of the balance of the revaluation account of RWF 9,011 million. As per the agreement, the Government of Rwanda started repaying this debt in 2002. As at 31.12.2003, it had repaid an amount equivalent to RWF 1,012 million.

5.	ADVANCES TO BANKS AND OTHER FINANCIAL INSTITUTION	IS 2003	2002
	Correspondent accounts	144,594,207	176,982,157
	Financing	1,424,230,683	2,309,248,144
		1,568,824,890	2,486,230,301

Correspondent accounts opened with commercial banks are practically no longer operational since 1995. The balance of RWF 144 million was to a large extent due to the claim on National Post Office. NBR continued to manage several lines of credit granted to the Government by external donors. In 2003, it created a new credit line relating to the refinancing facility of agricultural and agro-industrial activities.

6. STOCKS OF CONSUMABLES

	117,441,221	119,998,837
Provisions for depreciation	(32,879,483)	-
Total stocks	150,320,704	119,998,837

7. MISCELLANEOUS CLAIMS

Claims on employees	2,160,525,347	1,875,611,314
Adjustment accounts	911,042,361	547,385,873
Other claims	144,245,233	214,437,233
Provision for unrecoverable debts	(255,843,548)	(310,396,128)
	2,959,969,393	2,327,038,292

Claims on employees include mainly loans for construction of houses, purchase of vehicles and salary advances. Adjustment accounts relate to suspense and closing entries.

	······································	6,211,666,743	9,105,796,738

IMF accounts are held in SDR. As such, they are revalued daily like all other foreign currency accounts. At the end of the financial year, they are valued in RWF based on the average exchange rate of SDR ruling at the date. The SDR allowances account represents the amount of cash foreign currency given to Rwanda by IMF. In principle, as long as Rwanda remains a member of IMF, this amount is not repayable. However, NBR pays quarterly commissions on these allowances at the rate equal to the one applicable to cash credits granted by the same institution.

16. OTHER CREDITS	2003	2002
Staff accounts	93,222,032	54,182,544
Non statutory accounts in RWF	940,164,579	1,046,136,820

Endowments to General Reserve Fund	300,675,099	530,936,436	632,708,600
Profits for the financial year	5,462,923,075	2,654,682,178	3,163,542,998

At its meeting held on 28.03.2003, the Board of Directors of NBR decided that all exchange rate fluctuations profits should be entered on the exchange rate fluctuations Provisions account. Thus the result to be allocated became RWF 1,503,375,494. Pursuant to law No. 11/97 establishing the Statute of NBR, a proportion equivalent to 20% of this amount will be allocated to the General Reserve Fund and, as usual, an allowance equivalent to 15% of the balance to be distributed will be allocated to the Social Fund of the Bank.

27. CASH FLOW

The cash flow in the table below comprises the following balances:

	2003	2002
Cash in foreign currency	606,579,292	116,332,483
